NET ASSET VALUE PER SHARE

The net asset value per share for each Sub-Fund and, if there are more than one class of shares in a Sub-Fund, the net asset value per share for each class of shares, are calculated on each bank business day in Luxembourg (the "Valuation Date") and each last day of the financial year or half-year by the Administrative Agent under the responsibility of the SICAV's Board of Directors. The net asset value is not calculated on the first business day after the last day of the financial year or the half-year.

RISK MANAGEMENT PROCEDURE

The SICAV will use a risk management procedure enabling it to monitor and measure, at any time, the risk of the positions and their contribution to the overall risk profile of each Sub-Fund. The SICAV shall also use a method for accurate and independent assessment of the value of OTC derivative instruments. Each Sub-Fund must ensure that the sum of commitments arising from derivatives instruments does not exceed the net value of the portfolio. Such commitments are calculated considering the current value of the underlying asset, counterparty credit risk, changes in the futures contract market and the time needed to settle positions. Pursuant to amended Law of December 17, 2010, as well as regulations and circulars in force, specifically CSSF circular 11/512, each Sub-Fund must use a risk management procedure that assesses market exposure, liquidity risks and counterparty risks, as well as any other type of risk, including operational risks, that prove to be material for the Sub-Fund.

Commitment approach

Regarding the risk management procedure, some Sub-Funds use the commitment approach to monitor and measure the total exposure. This approach measures the total exposure in relation to financial derivative instruments ("FDI") and other effective portfolio management techniques, if any, considering any effects of settlement and hedging, if any, which should not exceed the total net value of the Sub-Fund's portfolio.

Based on the standard commitment approach, each FDI position is converted into the market value of the equivalent position in its underlying asset.

RISK MANAGEMENT PROCEDURE (continued)

The following Sub-Funds use the commitment approach:

BASE INVESTMENTS SICAV - BONDS VALUE
BASE INVESTMENTS SICAV - BONDS USD
BASE INVESTMENTS SICAV - BONDS CHF
BASE INVESTMENTS SICAV - FLEXIBLE LOW RISK EXPOSURE
BASE INVESTMENTS SICAV - EQUITIES U.S.A.

Value at Risk (VaR) approach

Regarding the risk management procedure, some Sub-Funds' global exposure is monitored and measured using the absolute VaR approach.

In financial mathematics and risk management, the VaR approach is a widely used method to calculate the risk of loss on financial assets of a specific investment portfolio. For a given investment portfolio, with a given probability level and time horizon, VaR is defined as the limit on which basis the potential loss of the investment portfolio's market value over the given time horizon exceeds such limit (under normal market conditions and with no transactions involving the investment portfolio) is equal to said probability level.

The VaR is calculated based on a single confidence level of 99%, as well as a 20-days holding period.

The VaR of the Sub-Fund is limited by an absolute VaR calculated on the basis of the net asset value of the Sub-Fund and not exceeding a maximum VaR, which is determined by the Board of Directors, taking into account the investment policy and risk profile of the Sub-Fund.

The following Sub-Fund uses the VaR approach: BASE INVESTMENTS SICAV - BONDS MULTICURRENCY

For BASE INVESTMENTS SICAV - BONDS MULTICURRENCY, the VaR limit during the period was:

Minimum VaR: 0.63%

Maximum VaR: 19.60%

Average VaR: 3.29%

The VaR model is based on a historical simulation with an observation period of one year. The holding period is one month (20 days). The limit for the sub-fund is 20% as fixed by the Law in force.

The average leverage of the year for the sub-fund was as follows: 256.18%

REPORT ON THE ACTIVITIES *

BASE INVESTMENTS SICAV - BONDS VALUE

<i>Performance</i>	<i>Fiscal year 2015/16</i>	<i>Since January the 1st 2016</i>	<i>Since launch date</i>
Class EUR*	-2.99%	-4.65%	+92.53%
Class USD*	-3.18%	-4.67%	+13.97%
Class CHF*	-4.02%	-4.87%	+12.41%
Benchmark**	+0.65%	+2.56%	+99.16%

Market trend

During the fiscal year just ended we have witnessed the power of central banks, especially the ECB on investments. The QE, launched in February 2016, has continued until now and has progressively acquired power with interest rates cuts and increases in the quantities and types of bonds purchased. The effect on the markets has kept real yields abundantly negative.

Credit spreads, while remaining basically close to the minimum have witnessed some moments of boosting mainly because of the collapse in commodity prices of oil. Market expectations remain paradoxically anchored to an inability of the ECB to succeed in their reflationary intent and then, for example, the German thirty years bond has low yields than the European core inflation.

Sub-Fund Performance

The sub-fund recorded a negative performance of -2.99% in the fiscal year compared to a +0.65% benchmark performance. In fact the end of March 2015 represented the peak of the markets and the beginning of the year 2016 has been particularly difficult. We believe we have done a good job in the 12 months although penalized by an unfavorable timing. The sub-fund had a positive net exposure to the US dollar around 20%.

BASE INVESTMENTS SICAV - BONDS USD

<i>Performance</i>	<i>Fiscal year 2015/16</i>	<i>Since January the 1st 2016</i>	<i>Since launch date</i>
Sub-Fund *	+0.28%	+1.65%	+51.11%
Benchmark**	+2.19%	+2.62%	+91.49%

Market trend

The fiscal year turned out to be quite turbulent in the credit market in US dollars. In particular, concerns about China, oil and emerging markets have resulted in significant widening of spreads on certain market segments. The action of central banks has mitigated the negative impact and brought a further compression of yields on US government curve, although Fed has increased the rates.

Sub-Fund Performance

The sub-fund recorded a positive performance, although below its reference benchmark. The component of the portfolio allocated to emerging market bonds has long been a cause of suffering, although in the latter part of the fiscal year has witnessed a strong recovery.

BASE INVESTMENTS SICAV

BASE INVESTMENTS SICAV - BONDS CHF

<i>Performance</i>	<i>Fiscal year 2015/16</i>	<i>Since January the 1st 2016</i>	<i>Since launch date</i>
Sub-Fund *	-1.80%	+0.12%	+22.93%
Benchmark**	+1.69%	+1.59%	+53.55%

Market trend

The CHF fixed income market has been significantly affected by the sell-off of bonds in April and May, struggling to get back despite the Swiss government yields remain at historically low levels and plenty of negative levels. Only corporate bonds may still offer positive returns, although often with fractional yields.

Sub-Fund Performance

The sub-fund is operating in an extremely difficult context, with much of the investable universe to yield zero or negative. The fiscal year ended with a negative performance, largely due to the spread widening in the months of August and December, which has only been partially reverted.

BASE INVESTMENTS SICAV - BONDS - MULTICURRENCY

<i>Performance</i>	<i>Fiscal year 2015/16</i>	<i>Since January the 1st 2016</i>	<i>Since launch date</i>
Class EUR*	-1.78%	+1.14%	-8.90%
Class CHF*	-2.76%	+0.97%	-14.67%
Class USD*	-1.46%	+1.35%	-13.54%
Benchmark**	+0.94%	+0.20%	+9.37%

Market trend

The topics that characterized the fiscal year are basically three: the fall of commodities prices, the fears linked to a slowdown in the Chinese economy and the monetary policy dynamics of the major central banks. In particular the US Federal Reserve, after more than seven years, has raised interest rates, while the European Central Bank continued its accommodative action strengthening the quantitative easing in place. Despite this clear divergence in monetary policy the US Dollar closed the year down. Clear signal of how the trend of US Dollar appreciation is now ended. Emerging currencies have suffered for the most part of the fiscal year. Only in the last few months we see a renewed interest in the topic.

Sub-Fund Performance

The sub-fund had a negative performance resulting from some positions in currencies tied to commodities and the absence of clear trends in which invest. The US Dollar closed the fiscal year fell by more than 6 percentage points. The divergence between the monetary policy of FED than other major central banks (ECB, BoJ, SNB) La divergenza tra la politica monetaria della FED rispetto alle altre principali banche centrali (BCE BoJ BNS) is valid, despite this the Usd interrupted the strengthening trend that characterized this currency from the beginning of 2014.

Class USD*	-4.79%	-2.88%	+14.73%
Benchmark**	-1.51%	+1.28%	+26.52%

Market trend

The fiscal year began with valuations of the stock and bond markets at extremely high levels, driven by the expansionary policies of the ECB. This resulted in a year characterized by volatility, with strong corrections in an initial phase concerning the bonds (April to June), then on equities and the US Dollar (August and January). Even on credit we have seen episodes of high volatility, although the action of the central banks will continue to provide a market support in difficult phases. Emerging markets and commodities continued their bear market, reversing the route until the final months of the fiscal year.

Sub-Fund Performance

The sub-fund has a negative performance during the period, in a context of equity and bond markets falling. The US Dollar component, whose contribution was significant in the previous years, has caused, although moderately, an underperformance. The defensive positioning in equity markets has been rewarding, while the duration was kept at too low levels in the last months of the fiscal year.

Sub-Fund *	-8.75%	-3.15%	+55.06%
Benchmark**	-0.39%	+0.77%	+70.82%

Market trend

Over the past 12 months, the US market has touched up several times all-time highs, despite the QE program termination and the start of the exit strategy plan aimed at normalization of market rates. The difficulties encountered last fall and early this year, have not had deep consequences on the solid long-term uptrend, so that during last weeks prices are back to be traded close to historical highs.

Sub-Fund Performance

The philosophy of the sub-fund which aims to cut the benchmark yields volatility tails, prompted the investment manager to progressively cover the equity risk, when prices tended to rise. The net exposure of the sub-fund has always been contained in a range with a maximum of 70% up to a minimum of 50%, although the exposure to highly volatile sectors has almost completely invalidated the hedging effect. For this reason, today, the portfolio expresses a beta next to the unit, a choice made to try to maximize the effect of hedging created up to now.

Sub-Fund *	-10.34%	-8.39%	-15.36%
Benchmark**	-11.31%	-9.47%	+27.01%

Market trend

The performance of the Swiss stock exchange in the last fiscal year can be divided into two parts. The first one, after SNB's choice to abandon the minimum threshold with euro, has been characterized by a total recovery of losses achieving new highs in August. Afterwards the index began a downward trend, primarily due to the pharmaceutical stocks, penalized by the public discussion on high prices of certain therapies and the possible election of Hillary Clinton, notoriously hostile to this industry.

Sub-Fund Performance

The sub-fund during this fiscal year posted a performance of -10.34%, slightly better than its benchmark. The sub-fund has suffered for most of the period the overweighting of cyclical sectors stocks. The downsizing of economic growth and the consequent reduction of corporate profits weighed on their market performance. We believe that a strong potential is still represented by medium and small cap securities with a certain cyclical performance, active in niche markets, characterized by high operating margins.

Class CHF*	-8.89%	-3.93%	-13.69%
Benchmark**	-3.65%	-1.95%	+8.99%

Market trend

The European stock markets had a difficult fiscal year, losing more than 25% from the maximum reached in April 2015. The valuations arising from the enthusiasm from Qe of ECB have proved unsustainable. The long awaited growth of earnings has not materialized, because of a global macroeconomic scenario not bright and serious concerns about the prospects of Chinese economy. The sectors most under pressure were the financials and securities linked to commodities.

Sub-Fund Performance

The sub-fund has been defensive in the first part of the fiscal year, softening the prices volatility during the summer tensions in Greece and China. However in the second part of the fiscal year the impact of the corrections in share prices has been more marked, in particular in December and January, resulting in underperformance compared to the benchmark.

Benchmark**	+0.07%	+0.00%	+31.39%

Market trend

During the fiscal year just ended we have witnessed the power of central banks, especially the ECB on investments. The QE, launched in February 2016, has continued until now and has progressively acquired power with interest rates cuts and increases in the quantities and types of bonds purchased. The effect on the markets has kept real yields abundantly negative.

Credit spreads, while remaining basically close to the minimum have witnessed some moments of boosting mainly because of the collapse in commodity prices of oil.

Sub-Fund Performance

The sub-fund has a negative performance mainly due to the unfortunate timing of closing of the fiscal year, which coincided with the maximum 2015 and the minimum 2016. For the new year, we are satisfied and we are confident on the year to come.

Class USD*	-1.49%	-2.24	-0.39%
Benchmark**	-0.08%	-0.05%	+0.12%

Market trend

The period we are going to comment start in the spring of 2015 with the end of uptrend in equity markets. Since then we have witnessed two phases of heavy declines only partially recovered. This creates volatility peaks that frighten the market. The fall in oil prices, the policy tensions and the holding fears on big emerging countries (BRIC) linked to the commodities world have contributed to increase this sentiment. Only bulwark to market tightness is, de facto, been the continued injection of liquidity by central banks. This action of fundamental importance has influenced the courses helping companies in difficulty rather than healthy ones, with strong balance sheets, which might not need it. As far as we are concerned, we remain convinced that the selection of quality assets is however a prudent investment policy and rewarding over time.

Sub-Fund Performance

The sub-fund is an alternative Fund of Fund. The portfolio creation is done through a careful selection of the best managers, mainly European, that over time have shown consistency in returns by pursuing as prime objective capital protection. Among the selected strategies preference is given to the long/short equity, the long equity with option sell and the market neutral. The aim of the portfolio diversification, significantly increased since December 2015, is to create a potential of performance independent from the market direction with the use of highly liquid instruments.

Sub-Fund *	-7.27%	+0.11%	+2.69%
Benchmark**	-8.65%	-3.97%	-1.18%

Market trend

The topics that characterized the fiscal year are basically three: the fall of commodities prices, the fears linked to a slowdown in the Chinese economy and the monetary policy dynamics of the major central banks. In particular the US Federal Reserve, after more than seven years, has raised interest rates, while the European Central Bank continued its accommodative action strengthening the quantitative easing in place. Despite this clear divergence in monetary policy the US Dollar closed the year down. Clear signal of how the trend of US Dollar appreciation is now ended. Emerging currencies have suffered for the most part of the fiscal year. Only in the last few months we see a renewed interest in the topic supported by a reversal of flows that after years of disinvestment returned positive.

Sub-Fund Performance

The sub-fund remains essentially tight to the benchmark trying with tactical operations to benefit from market fluctuations. The negative performance comes from the widespread strenght of Eur of which the sub-funds is for its nature "short". The objective to achieve a better return than the reference benchmark has been achieved thanks to the decision to not invest in currencies such as sterling and Swiss franc that in the fiscal year recorded a negative performance.

Class CHF*	-9.88%	-2.38%	-9.30%
Benchmark**	-11.75%	+1.17%	-14.74%

Market trend

During the reporting period Emerging and Frontier markets have suffered marked decline.

The collapse in oil price, the increase of interest rates by US Federal Reserve and the slowdown of Chinese economy have weighed respectively on share prices of Frontier markets and African shares, on currencies of all Emerging and Frontier markets, finally what was the first economy in Asia has decreed a significant valuation of the Eastern listing.

Sub-Fund Performance

Despite the context described the sub-fund was able to differentiate itself in the securities selection and was able to perform better than the reference benchmarks. The sub-fund remains focused on the long term approach, favoring sectors and single security of these countries.

The active share of the sub-fund is around 85% in light of a very specific exposure to these markets.

In addition the sub-fund takes advantage of periods of volatility to increase its positions in these listed companies.

FORWARD FOREIGN EXCHANGE CONTRACTS ON CURRENCIES

The value of investments for holders of shares belonging to a class denominated in a currency other than the reference currency of the Sub-Fund that issued these shares may increase or decrease due to exchange rate fluctuations between the two currencies. To avoid such risk, in the case of share classes denominated in currencies other than the Sub-Fund's reference currency, an exchange rate risk hedge transaction will be executed.

Contracts marked with a * are those specifically related to Share Class Hedging.

As at March 31, 2016, the following forward foreign exchange contract(s) on currencies was (were) outstanding:
