The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Dynamic Multi Asset Strategy SRI 50's investment objective is to invest in a broad range of asset classes, with a focus on global Equity, Bond and Money Markets in order to achieve over the medium-term a performance comparable to a balanced portfolio within a volatility range of 6% to 12% in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

The assessment of the volatility of the capital markets by the Investment Manager is an important factor in this process, with the aim of typically not falling below or exceeding a volatility of the Share price within a range of 6% to 12% on a medium to long-term average, similar to a portfolio consisting of 50% Global Bond Markets (hedged to EUR) and 50% global equity markets.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating) for equities, and 100% for debt securities.

Reduction of investment universe by excluding at least 20% of issuers.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 15% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Dynamic Multi Asset Strategy SRI 75

Legal entity identifier: 549300MVG26JNLKWO33

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Dynamic Multi Asset Strategy SRI 75 (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Dynamic Multi Asset Strategy SRI 75's investment objective is to invest in a broad range of asset classes, with a focus on global Equity, Bond and Money Markets in order to achieve over the medium-term a performance comparable to a balanced portfolio within a volatility range of 10% to 16% in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

The assessment of the volatility of the capital markets by the Investment Manager is an important factor in this process, with the aim of typically not falling below or exceeding a volatility of the Share price within a range of 10% to 16% on a medium to long-term average, similar to a portfolio consisting of 25% Global Bond Markets (hedged to EUR) and 75% global equity markets.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating) for equities, and 100% for debt securities.

Reduction of investment universe by excluding at least 20% of issuers.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Emerging Markets Equity SRI

Legal entity identifier: 5299008XMKNR6M71KE54

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Emerging Markets Equity SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Emerging Markets Equity SRI's investment objective is to invest in Equities of global Emerging Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy). The Investment Manager may engage in foreign currency overlay and thus assume separate foreign currency risks with regard to currencies of OECD member states, even if the Sub-Fund does not include any assets denominated in these respective currencies.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an

investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Reduction of investment universe by excluding at least 20% of issuers.

Application of the below sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of hydraulic fracturing and/or which provide services in relation to hydraulic fracturing of more than 5% of their revenues.
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of alcohol (limited to spirits) of more than 10% of their revenues.
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of agricultural genetically modified organisms -GMOs- of more than 5% of their revenues.
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of nuclear power and/or which provide services in relation to nuclear power of more than 10% of their revenues.
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of arctic drilling.
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of gambling and/or which are involved in the distribution/sales of gambling and/or which provide services in relation to gambling of more than 5% of their revenues.
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production and/or exploration of oil sands of more than 5% of their revenues.
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of military equipment and services and/or which are involved in the distribution/sales of military equipment and services and/or which provide services in relation to military equipment and services of more than 5% of their revenues.
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of pornography of more than 1% of their revenues and/or which are involved in the distribution/sales of pornography of more than 1% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a

review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned MSCI Emerging Markets Ext. SRI 5% Issuer Capped Total Return Net as benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The Sub-Fund uses an SRI benchmark which is however not completely aligned with the environmental or social characteristics promoted by the sub-fund. The MSCI Emerging Markets SRI 5% Issuer Capped Index captures large and mid cap stocks across 24 Emerging Markets (EM) countries. The Index is a capitalization weighted index that provides exposure to companies with outstanding Environmental, Social and Governance (ESG) ratings and excludes companies whose products have negative social or environmental impacts.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund's investment strategy.

- **How does the designated index differ from a relevant broad market index?**

The benchmark uses ESG criteria as well as exclusion criteria for index construction.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmarks' methodology may be found at <https://www.msci.com/documents/10199/f999c363-a604-415a-baa9-8cf9fe05f1e0> or at www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Emerging Markets SRI Bond

Legal entity identifier: 529900V4JP0EVDIGZD94

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Emerging Markets SRI Bond (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Emerging Markets SRI Bond's investment objective is to invest in sovereign and quasi-sovereign Debt Securities of global Emerging Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an

investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of Sub-Fund's portfolio are required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits)). While most holdings of Sub-Funds will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds and non-rated investments.

Reduction of investment universe by excluding at least 20% of issuers.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

For direct investments in sovereign issuers, an internal scoring model weighting various environmental, social and governance factors is applied for which Freedom House Index is considered as one criterion amongst further criteria. Debt Securities of issuers other than sovereign issuers may not be acquired if the respective issuer's country does not meet the requirements of the aforesaid internal scoring model.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents 30% of the total investments.

This graph is based on the binding minimum quota for investments in sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned J.P. MORGAN ESG Emerging Market Bond (EMBI) Global Diversified Total Return as benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The Sub-Fund uses an ESG benchmark which is however not completely aligned with the environmental or social characteristics promoted by the sub-fund. The Benchmark applies an ESG scoring and screening methodology to tilt toward issuers ranked higher on ESG criteria and green bond, and to underweight and remove issuers that rank lower.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund's investment strategy.

- **How does the designated index differ from a relevant broad market index?**

The benchmark uses ESG criteria as well as exclusion criteria for index construction.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmarks' methodology may be found at <https://www.jpmmorgan.com/content/dam/jpm/cib/complex/content/markets/composition-docs/pdf-30.pdf> or at www.jpmmorgan.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Emerging Markets SRI Corporate Bond

Legal entity identifier: 529900G3RBZLNLUYXA43

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Emerging Markets SRI Corporate Bond (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Emerging Markets SRI Corporate Bond's investment objective is to invest in corporate Debt Securities of global Emerging Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of Sub-Fund's portfolio are required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits)). While most holdings of Sub-Funds will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds and non-rated investments.

The rated corporate instruments are adhering to the minimum rating threshold of 1.50 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Reduction of investment universe by excluding at least 20% of issuers.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

For direct investments in sovereign issuers, an internal scoring model weighting various environmental, social and governance factors is applied for which Freedom House Index is considered as one criterion amongst further criteria. Debt Securities of issuers other than sovereign issuers may not be acquired if the respective issuer's country does not meet the requirements of the aforesaid internal scoring model.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned J.P. MORGAN ESG Corporate Emerging Markets Bond (CEMBI) Broad Diversified Total Return as benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The Sub-Fund uses an ESG benchmark which is however not completely aligned with the environmental or social characteristics promoted by the sub-fund. The Benchmark applies an ESG scoring and screening methodology to tilt toward issuers ranked higher on ESG criteria and green bond, and to underweight and remove issuers that rank lower.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund's investment strategy.

- **How does the designated index differ from a relevant broad market index?**

The benchmark uses ESG criteria as well as exclusion criteria for index construction.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmarks' methodology may be found at <https://www.jpmmorgan.com/insights/research/index-research/composition-docs> or at www.jpmmorgan.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Enhanced Short Term Euro

Legal entity identifier: 549300S8WEDESAOX7W77

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **2.50%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Enhanced Short Term Euro (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Enhanced Short Term Euro's investment objective is to invest in global Bond Markets with Euro exposure in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy). With the objective of achieving additional returns, the Investment Manager may also assume separate risks related to bonds and money market instruments and may engage in foreign currency overlay and thus may also assume separate currency risks, even if the Sub-Fund does not include any assets denominated in these respective currencies.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI

Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

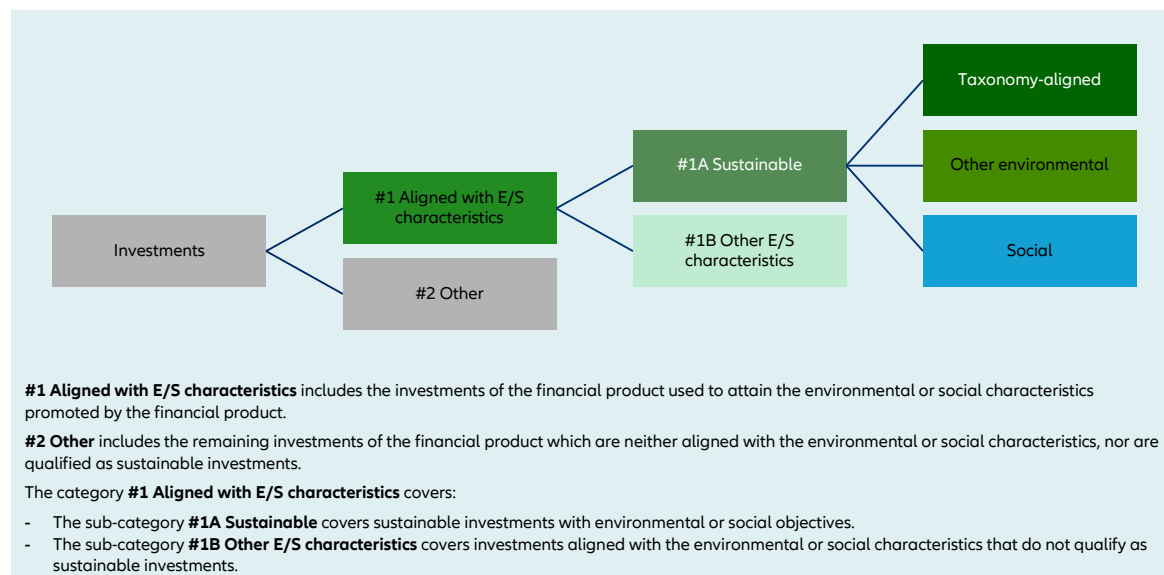

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 2.50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2.50%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2.50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2.50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro Balanced

Legal entity identifier: 529900R48QOZDVDDMW24

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **7.50%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro Balanced (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Euro Balanced's investment objective is to invest in Eurozone Equity Markets and Eurozone Government Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating) for equities, and 100% for debt securities.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 7.50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 7.50%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents 70% of the total investments.

This graph is based on the binding minimum quota for investments in sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 7.50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 7.50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro Bond

Legal entity identifier: 4JPESYE6XYML1UXRJ264

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **3.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro Bond (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Euro Bond's investment objective is to invest in Debt Securities with Euro exposure of global Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% Sub-Fund's portfolio is required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits). While most holdings of the Sub-Fund's will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

This sub-fund is invested in assets that cannot be sold at present due to political, economic or other restrictions and/or requirements imposed by third parties over which Allianz Global Investors has no influence. This circumstance leads to the fund being invested in assets which do not or not fully comply with the investment policy of the fund, or the sustainable investment approach pursued by the fund.

However, such investments represent an absolutely marginal position in the sub-fund's assets. As soon as the aforementioned restrictions and/or requirements regarding such assets have been lifted or relaxed and a complete and/or partial sale of the aforementioned assets becomes possible, Allianz Global Investors will immediately make use of this possibility.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 3% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro Bond Short Term 1-3 Plus

Legal entity identifier: 5493007JLYJUUN37K611

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **1.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro Bond Short Term 1-3 Plus (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Euro Bond Short Term 1-3 Plus's investment objective is to invest in Debt Securities with Euro exposure of global Bonds Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 1% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro Credit SRI

Legal entity identifier: 529900VVLGKMM7VV9P20

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **15.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro Credit SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Euro Credit SRI's investment objective is to invest in Investment Grade rated Debt Securities of OECD or EU Bond Markets denominated in EUR in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an

investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% Sub-Fund's portfolio is required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits). While most holdings of the Sub-Fund's will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

90% of the rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating), and 10% are adhering to a rating threshold between 1.5 and 2.

Reduction of investment universe by excluding at least 20% of issuers.

Application of the below sustainable minimum exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 15% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro Government Bond

Legal entity identifier: 529900Z9QTQFM4SHJL76

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **1.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro Government Bond (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Euro Government Bond's investment objective is to invest in government Debt Securities of the Eurozone Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

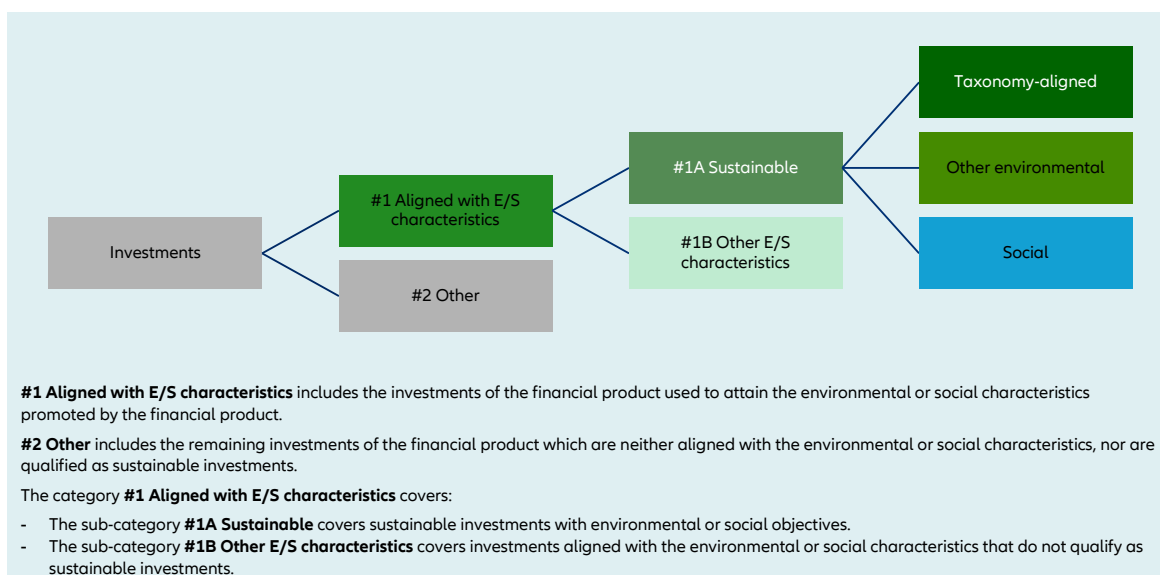

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 1% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro High Yield Bond

Legal entity identifier: IS7IKH6HMU9CTMM3VM48

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro High Yield Bond (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Euro High Yield Bond's investment objective is to invest in high yield rated Debt Securities denominated in EUR in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 70% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the ICE BOFAML Euro High Yield BB-B Constrained as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.

- **How does the designated index differ from a relevant broad market index?**

The benchmark is a broad market index.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmark’s methodology may be found at <https://indices.theice.com>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro High Yield Defensive

Legal entity identifier: 529900SMJDSY6ZOGRB53

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro High Yield Defensive (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund will limit its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average sustainable investment share of Sub-Fund Assets.
- The actual share of investments not satisfying the Do No Significant Harm ("DNSH") assessment of Sub-Fund Assets.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Euro High Yield Defensive's investment objective is to invest in Debt Securities of European bond markets in accordance with the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)"). The Sub-Fund's strategy is to target a specific minimum allocation into Sustainable Investments and limit its allocation to DNSH.

The proportion of assets which do not have a Sustainable Investment share assessment is expected to be low. Examples of instruments not having a Sustainable Investment share assessment are cash and deposits, some Target Funds, and investments for which data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The investment strategy adheres to the following binding elements to attain the environmental and/ or social characteristics promoted:

Min. 70% of Sub-Fund's portfolio shall be invested in companies which have been assessed according to the Sustainable Investment methodology (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% of weighted-average Sustainable Investment share at Sub Fund Assets. If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Max. 10% of Sub-Fund assets will be invested in securities from issuers not satisfying the Do No Significant Harm ("DNSH") principles.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euro Inflation-linked Bond

Legal entity identifier: 52990048RHL MIXREUF14

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euro Inflation-linked Bond (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Not applicable

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Euro Inflation-linked Bond's investment objective is to invest in Debt Securities of OECD or EU Bond Markets with a focus on inflation-linked bonds in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

90% of the rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating), and 10% are adhering to a rating threshold between 1.5 and 2.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?

Not applicable

- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Euroland Equity Growth

Legal entity identifier: 549300P15C6H38NBO527

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Euroland Equity Growth (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Euroland Equity Growth's investment objective is to invest in the Equity Markets of the Eurozone with a focus on growth stocks in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the S&P Eurozone Large Mid Cap Growth Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.spglobal.com/spdji/en/documents/methodologies/methodology-sp-global-bmi-sp-ifci-indices.pdf> or at www.spglobal.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Europe Equity Growth

Legal entity identifier: 549300N3S28ICP3HG051

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Europe Equity Growth (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Not applicable

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Europe Equity Growth Select's investment objective is to invest in European Equity Markets with a focus on growth stocks of large market capitalization companies in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the S&P Europe Large Cap Growth Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.spglobal.com/spdji/en/documents/methodologies/methodology-sp-global-bmi-sp-ifci-indices.pdf> or at www.spglobal.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Europe Equity SRI

Legal entity identifier: 529900YVCW4Q10X95C76

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **15.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Europe Equity SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through the integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio. As the Sub-Fund is applying SRI Strategy Type A, it addresses GHG Intensity by aiming to have a lower Weighted Average GHG Intensity of its portfolio than the Weighted Average GHG Intensity of its reference benchmark. For this reason, a reference benchmark has been designated for the purpose of comparing the Sub-Fund's GHG intensity with the reference benchmark's GHG intensity.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 25% reduction of the investment universe.
- The actual weighted average GHG Intensity of Sub-Fund's portfolio vs the weighted average GHG Intensity of the Sub-Fund's benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Europe Equity SRI's investment objective is to invest in European Equity Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy Type A).

The Sub-Fund follows the SRI best-in-class approach. The principle of the SRI best-in-class approach is that the Sub-Fund's Investment Manager selects from the investment universe available to the Sub-Fund those issuers from all sectors that perform better within their sector based on the analysed sustainability factors.

As part of the SRI best-in-class approach, the Sub-Fund's Investment Manager considers and analyses sustainability factors, which are environmental, social, human rights, governance, and business behaviour factors into account as follows:

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- The aforesaid sustainability factors are combined on the basis of a systematic analysis and assigned to the respective issuer. The sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

The SRI Rating is used to rank and select or weight securities for the portfolio construction.

As part of SRI Strategy Type A, the Sub-Fund aims to have a lower Weighted Average GHG Intensity than the Weighted Average GHG Intensity of its benchmark. The Weighted Average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The GHG intensity of a company in this sense includes both the direct greenhouse gas emissions (GHG emissions) of this company (Scope 1) and the indirect GHG emissions of this company from the purchase of energy (e.g., electricity, heat) generated by energy suppliers of this company (Scope 2) and upstream and downstream GHG emissions generated by its suppliers and customers related to the products of the issuer (scope 3). Subsequently, the GHG emissions (Scope 1, Scope 2 and Scope 3) of such company are set in relation to the sales of this company (sales for non-financial companies, gross sales for financial companies). The portfolio weights of those issuers that have GHG intensity data are mathematically adjusted in such a way that the sum of their weighting in the portfolio of the Sub-Fund is 100%, i.e., if, for example, the necessary GHG intensity data are only available for part of the Sub-Fund, this part mathematically forms the entire portfolio of the Sub-Fund for the purposes of calculating the GHG intensity. This results in the weighted average GHG intensity of the Sub-Fund's portfolio as a key figure based on the assets contained in the Sub-Fund's portfolio that can be valued. The weighted average GHG intensity of the Sub-Fund's benchmark is determined with reference to the issuers included in the benchmark for which GHG intensity data are available. Analogously to the calculation of the GHG intensity of the Sub-Fund's portfolio, the portfolio weights of those issuers in the benchmark for which GHG intensity data are available are mathematically adjusted in such a way that only issuers with available GHG intensity data are included in this calculation, i.e. if, for example, the necessary GHG intensity data are only available for a part of the benchmark, this part mathematically forms the entire benchmark for the purpose of calculating the GHG intensity. To determine the GHG Intensity of a certain company/ of a certain issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund's investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of Sub-Fund's portfolio are required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits)). While most holdings of Sub-Funds will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Reduction of investment universe by excluding at least 25% of issuers.

Lower Weighted Average GHG Intensity of Sub-Fund's portfolio than the Sub-Fund's benchmark

Application of the below sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria according to the SRI Strategy Type A for direct investments.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal.

The Sub-Fund is managed in accordance with the SRI Strategy Type A (compliant with the “Towards Sustainability Label”) and applies the following specific exclusion criteria and therefore refrains from investing directly in:

- securities issued by companies involved in the production of tobacco or e-cigarettes, and securities issued by companies which derive more than 5% of their revenues from the distribution of tobacco or e-cigarettes.
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, submunitions, chemical weapons, biological weapons, depleted or any other industrial uranium weapons, white phosphorus weapons, and nuclear weapons), and securities issued by companies that derive more than 5% of their revenues from the production of (other) weapons, military equipment, and services,
- securities issued by companies that generate more than 5% of their revenue from thermal coal or conventional oil and gas or non-conventional oil and gas-related activities such as exploration, mining, extraction, transportation, distribution, or refinement, or providing dedicated equipment or services. This includes, but is not limited to, the extraction of tar/oil sands, coalbed methane, extra heavy oil, shale oil, shale gas and arctic or ultra deep drilling. The aforesaid exclusion criteria are not applicable for those issuers which have a Science Based Targets initiative (SBTi) target set at well-below 2°C’ or 1.5°C’, or have a SBTi ‘Business Ambition for 1.5°C’ commitment,
- securities issued by companies that are involved in exploration and be involved in exploitation or development of new unconventional oil or gas fields or the exploitation or development of new coal mines building new coal-fired power stations or absolute production of or capacity for coal-based power exceeds 5 GW. The non-expansion criteria can temporary be ignored in case of national legal obligations in the context of energy provision security,
- securities issued by companies that derive more than 5% of their revenues from coal-based energy generation. The aforesaid exclusion criterium is not applicable for those issuers which have a Science Based Targets initiative (SBTi) target set at well below 2°C’ or 1.5°C’, or have a SBTi ‘Business Ambition for 1.5°C’ commitment, or
- securities issued by companies which are involved in nuclear-, gas- or coal-based energy generation related products or services unless they derive more than 50% of their revenues from contributing activities (economic activities included in the EU taxonomy). The aforesaid exclusion criterium is not applicable for those issuers which have a Science Based Targets initiative (SBTi) target set at well- below 2°C’ or 1.5°C’ or have a SBTi ‘Business Ambition for 1.5°C’ commitment.

The Sub-Fund’s Investment Manager aims to exclude securities issued by companies with more than 25% of their revenues derived from products/services dedicated to the execution of harmful activities (companies which are involved in activities covered by the a.m. Sub-Fund’s specific exclusion criteria are executing “Harmful Activities”) shall be excluded. Products/services aimed at mitigating or reducing negative effects of Harmful Activities should not be included in this consideration.

The Sub-Fund is managed in accordance with the SRI Strategy Type A and refrains from investing directly in securities of sovereign issuers of countries,

- that on average of all 6 Worldwide Governance Indicators (WGI)¹, established by the World Bank, scores lower than -0.59 or,
- does score less than -1.00 on a single WGI.

In accordance with the SRI Strategy Type A, the Sub-Fund also refrains from investing directly in securities of sovereign issuers of high-income countries as defined by the World Bank²,

- that have not ratified or implemented the eight fundamental conventions identified in the International Labour Organisation’s declaration of the Fundamental Rights and Principles at work,
- that have not ratified or implemented at least half of the 18 core International Human Rights Treaties national legislation or equivalent,

¹ <https://info.worldbank.org/governance/wgi/> and <https://databank.worldbank.org/source/worldwide-governance-indicators>. Each country receives a score between -2.5 and 2.5 on each of the 6 WGI.

² <https://datatopics.worldbank.org/world-development-indicators/the-world-by-income-and-region.html>

- which are not party to the Paris Agreement, the UN Convention on Biological Diversity, or the Nuclear Non-Proliferation Treaty,
- with particularly high military budget exceeding 4% of the respective country's Gross Domestic Product (GDP),
- which are considered as the jurisdictions with strategic deficiencies in their regimes to counter money laundering and combating the financing of terrorism and proliferation by the Financial Action Task Force (FATF),
- scoring below 40/100 on the Transparency International Corruption Perception Index, or
- qualified with a score as 'Not free' by the Freedom House Index¹,
- in which the death penalty is legal and in use.

It is noted that certain companies are currently not yet aligned with the criteria according to the preceding section "Sub-Fund's specific exclusion criteria" but are nevertheless within the best of their peer group in transitioning their business model.

It is noted that this Sub-Fund can invest in securities of such companies (the "non-compliant companies") selectively and to a limited extent (the "Phase-out margin") as follows:

- The total portfolio exposure to non-compliant companies (only concerning eligible activities) is until 31 December 2023 max. 4,00% of the net asset value of the Sub-Fund. The percentage will decrease to max. 3,00% of the Sub-Fund's net asset value applicable until 31 December 2024, to max. 2,00% of the Sub-Fund's net asset value applicable until 30 June 2025 and to 0% of Sub-Fund's net asset value from 1 July 2025 onwards.
- Additionally, companies in this margin shall be subject to a best-in-class selection that selects from the 25% highest ESG-rated companies (leaders), with special attention to sustainable energy transition.
- Companies in this margin shall still meet the governance criteria as mentioned above.

It is noted that the requirements of the Phase-out margin are solely relevant for non-compliant companies executing Harmful Activities within the sector of power generation. The provisions of the Phase-out margin do not apply to other Harmful Activities such as tobacco, weapons, coal, and conventional or unconventional oil & gas.

The Sub-Fund's current specific exclusion criteria (including additional information to the Phase-out margin) and further details may be updated from time to time and can be consulted on the website <https://regulatory.allianzgi.com/en/esg/sri-type-a-policy>

To undertake the aforesaid exclusion, various external data and research providers are used.

The Sub-Fund's sustainable minimum exclusion criteria, as well as the Sub-Fund's specific exclusion criteria according to the SRI Strategy Type A, are based on information from an external data provider and are coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 25%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

¹ The country in question may be found on the Freedom House Index (<https://freedomhouse.org/countries/freedom-world/scores>) in the column "Total Score and Status" of the section "Global Freedom Scores".

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Fund's assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 15% of the Sub-Fund's assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The Sub-Fund has not assigned a specific index which is aligned with the environmental and/or social characteristics that the Sub-Fund promotes. The Sub-Fund has assigned the index “MSCI Europe Total Return Net” as the Sub-Fund’s benchmark. This benchmark is a market index. The Investment Manager manages the Sub-Fund so that the Sub-Fund’s GHG intensity is lower than the GHG intensity of the Sub-Fund’s benchmark as described in the section “What investment strategy does this financial product follow?”.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Sub-Fund’s benchmark is a market index. The reference benchmark is not continuously aligned with the environmental or social characteristics promoted by the financial product but serves to compare the GHG intensity of the Sub-Fund with the market as reflected by the benchmark.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Sub-Fund’s benchmark is not continuously aligned as does not promote environmental or social characteristics.
- **How does the designated index differ from a relevant broad market index?**
Sub-Fund’s benchmark is a market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark’s methodology may be found at <https://www.msci.com/documents/10199/f6179af3-b1d1-4df0-8ac9-215451f3ac0a> or at www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Europe Equity Value

Legal entity identifier: 222100SUFLTZGSP5T321

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Europe Equity Value (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Europe Equity Value's investment objective is to invest in European Equity Markets with a focus on value stocks in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

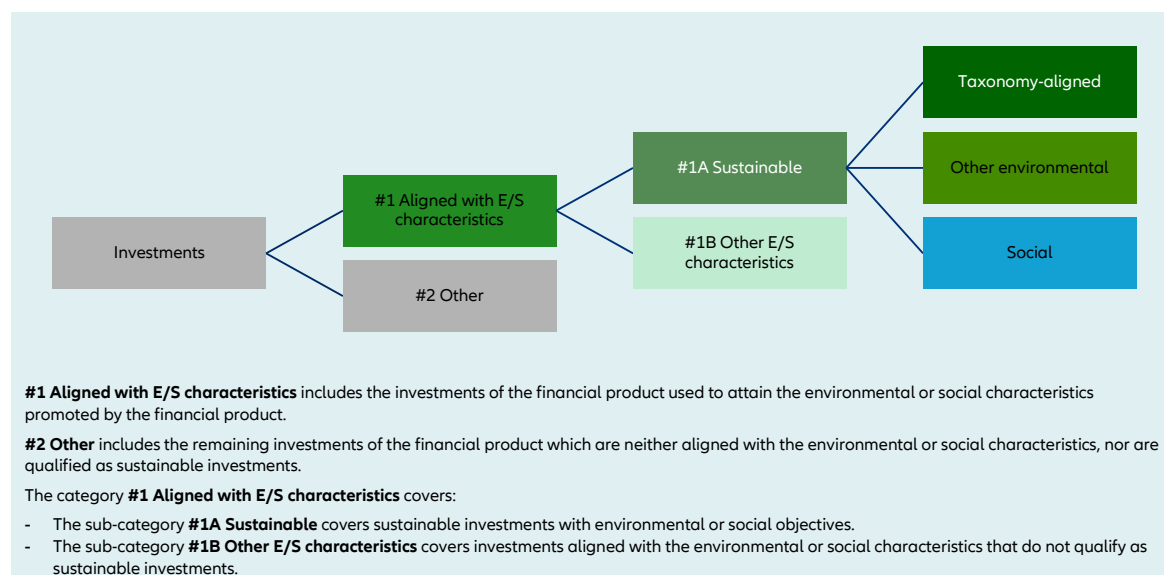

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the S&P Europe Large Mid Cap Value Total Return as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark’s methodology may be found at <https://www.spglobal.com/spdji/en/indices/strategy/sp-enhanced-value-europe-largemidcap-index/#overview> or at www.spglobal.com

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Europe Mid Cap Equity

Legal entity identifier: 5493003SBYUCYZ0WXS18

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **30.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Europe Mid Cap Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund will limit its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average sustainable investment share of Sub-Fund Assets.
- The actual share of investments not satisfying the Do No Significant Harm ("DNSH") assessment of Sub-Fund Assets.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Europe Mid Cap Equity's investment objective is to invest in developed European equity markets, excluding Turkey and Russia, with a focus on mid-sized companies in accordance with the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)"). The Sub-Fund's strategy is to target a specific minimum allocation into Sustainable Investments and limit its allocation to DNSH.

The proportion of assets which do not have a Sustainable Investment share assessment is expected to be low. Examples of instruments not having a Sustainable Investment share assessment are cash and deposits, some Target Funds, and investments for which data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The investment strategy adheres to the following binding elements to attain the environmental and/or social characteristics promoted:

Min. 80% of Sub-Fund's portfolio shall be invested in companies which have been assessed according to the Sustainable Investment methodology (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 30% of weighted-average Sustainable Investment share at Sub Fund Assets. If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Max. 15% of Sub-Fund assets will be invested in securities from issuers not satisfying the Do No Significant Harm ("DNSH") principles.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

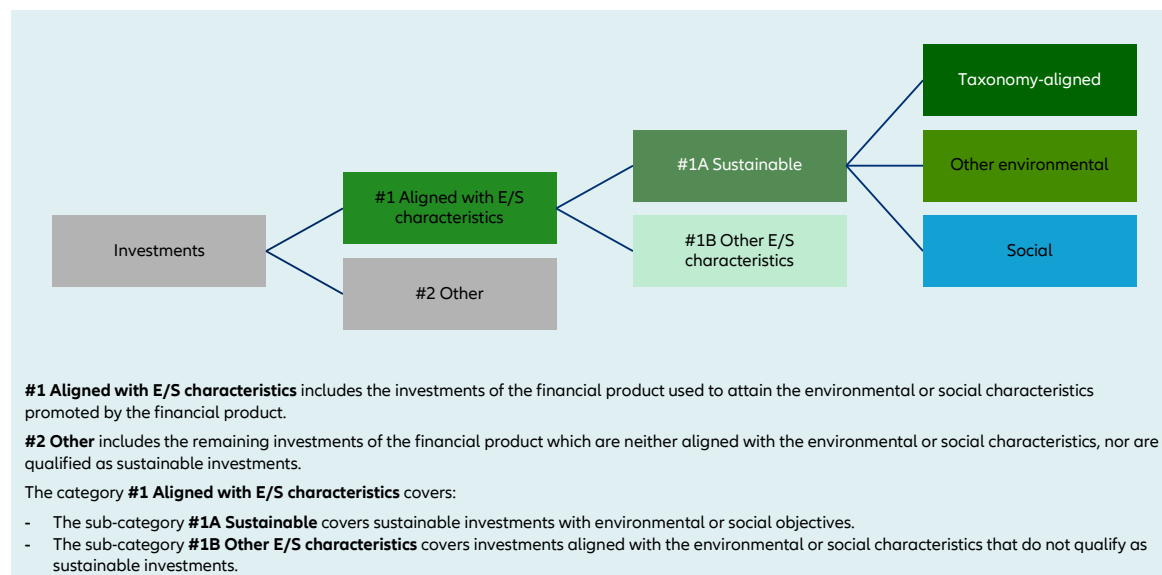

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 30% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 30%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 30%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 30%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Europe Small and Micro Cap Equity

Legal entity identifier: 52990079B3RQSR4XZV91

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Europe Small and Micro Cap Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund will limit its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average sustainable investment share of Sub-Fund Assets.
- The actual share of investments not satisfying the Do No Significant Harm ("DNSH") assessment of Sub-Fund Assets.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Europe Small and Micro Cap Equity's investment objective is to invest in European equity markets with a focus on micro to small cap companies in accordance with the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)"). The Sub-Fund's strategy is to target a specific minimum allocation into Sustainable Investments and limit its allocation to DNSH.

The proportion of assets which do not have a Sustainable Investment share assessment is expected to be low. Examples of instruments not having a Sustainable Investment share assessment are cash and deposits, some Target Funds, and investments for which data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The investment strategy adheres to the following binding elements to attain the environmental and/ or social characteristics promoted:

Min. 70% of Sub-Fund's portfolio shall be invested in companies which have been assessed according to the Sustainable Investment methodology (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% of weighted-average Sustainable Investment share at Sub Fund Assets. If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Max. 10% of Sub-Fund assets will be invested in securities from issuers not satisfying the Do No Significant Harm ("DNSH") principles.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Europe Small Cap Equity

Legal entity identifier: 5299004KPSJLVX3ZMU87

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Europe Small Cap Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund will limit its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average sustainable investment share of Sub-Fund Assets.
- The actual share of investments not satisfying the Do No Significant Harm ("DNSH") assessment of Sub-Fund Assets.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Europe Small Cap Equity's investment objective is to invest in European Equity Markets with a focus on small-sized companies in accordance with the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)"). The Sub-Fund's strategy is to target a specific minimum allocation into Sustainable Investments and limit its allocation to DNSH.

The proportion of assets which do not have a Sustainable Investment share assessment is expected to be low. Examples of instruments not having a Sustainable Investment share assessment are cash and deposits, some Target Funds, and investments for which data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The investment strategy adheres to the following binding elements to attain the environmental and/ or social characteristics promoted:

Min. 70% of Sub-Fund's portfolio shall be invested in companies which have been assessed according to the Sustainable Investment methodology (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% of weighted-average Sustainable Investment share at Sub Fund Assets. If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Max. 10% of Sub-Fund assets will be invested in securities from issuers not satisfying the Do No Significant Harm ("DNSH") principles.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz European Equity Dividend

Legal entity identifier: 549300XUMQIJXEX2O502

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz European Equity Dividend (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz European Equity Dividend's investment objective is to invest in companies of European Equity Markets that are expected to achieve sustainable dividend returns in accordance with the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)").

The Sub-Fund's strategy is to achieve, at least, a year-on-year improvement pathway on the Sub-Fund's weighted average Sustainability KPI. The Sustainability KPI measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity"). In order to reach this target, the Investment Manager will proceed to yearly checks, comparing the Sub-Fund's Sustainability KPI to the annual improvement pathway (time series) of the Sustainability KPI. The time series will be established at the first day of application of the Sustainability KPI (reference date) using the target annual improvement rate for the prospective fiscal year ends of the Sub-Fund. For each fiscal year end of the time series, the annual improvement rate will be applied to the value of the previous fiscal year end target. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

At least a 5% year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity starting at the reference date December 29, 2022. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Flexi Asia Bond

Legal entity identifier: 549300C83822MBOOH659

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **2.50%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Flexi Asia Bond (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Flexi Asia Bond's investment objective is to invest in Debt Securities of Asian bond markets denominated in EUR, USD, GBP, JPY, AUD, NZD, or any Asian currency in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 2.50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2.50%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2.50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2.50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the J.P. MORGAN JACI Composite Total Return as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.

- **How does the designated index differ from a relevant broad market index?**

The benchmark is a broad market index.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmark’s methodology may be found at www.jpmorgan.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Floating Rate Notes Plus

Legal entity identifier: 549300MEQ2M0QYJV6F90

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **3.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Floating Rate Notes Plus (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Floating Rate Notes Plus' investment objective is to invest in global bond markets with a focus on floating-rate notes with Euro exposure in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The application of the aforesaid specific exclusion criteria for direct investments will result in an investment verse with a bias on issuers whose business activities are concentrated in the financial sector.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 3% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Food Security

Legal entity identifier: 5299001E4VA6IBICG293

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **50.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Food Security's (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives.
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest 50% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Food Security's investment objective is to invest in global Equity Markets with a focus on companies with an engagement in the area of food security in accordance with the SDG-Aligned Strategy.

The Sub-Fund invests in Equities of companies which offer products and services across themes of food security. Companies engaging in the core theme of food security are companies which offer products or services that improve food management practices across the entire supply chain with the purpose of improving sustainability of the agricultural practices, natural resource efficiency, and affordability and quality of food as targeted by SDGs No. 2, 3, 6, 13, 14 and 15.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum 50% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of the Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments. Cash and derivatives are excluded from the aforesaid thresholds.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. Min. 50% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz German Equity

Legal entity identifier: 529900TEU4JD3HNC2746

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **15.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz German Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria for direct and indirect investments apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz German Equity's investment objective is to invest in German Equity Markets in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 30% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria as well as Sub-Fund specific minimum exclusion criteria for direct and indirect investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

Moreover, Sub-Fund specific exclusion criteria for direct and indirect investments apply:

- companies that generate more than 10% of their revenues from the production of energy or other use from / of fossil fuels (excluding natural gas),
- companies that derive more than 10% of their revenues from the extraction of petroleum,
- companies that derive more than 10% of their revenues from oil sands and oil shale mining, exploration, and services.

The sustainable minimum exclusion criteria as well as the Sub-Fund specific minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

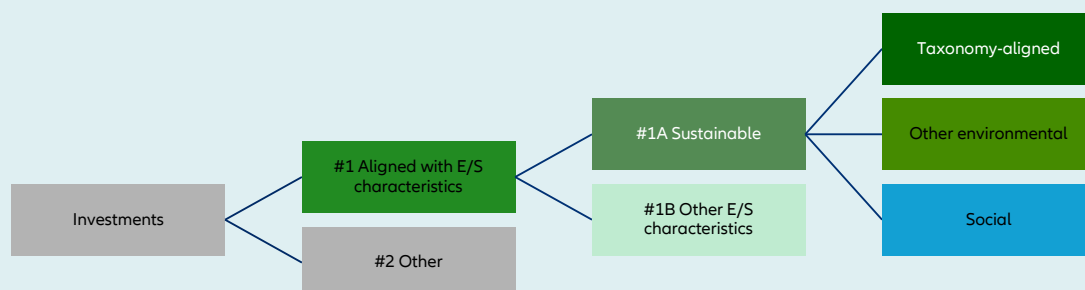

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 15% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 15%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the DAX as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.

- **How does the designated index differ from a relevant broad market index?**

The benchmark is a broad market index.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmark's methodology may be found at <https://qontigo.com/index/dax/>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Allocation Opportunities

Legal entity identifier: 529900RXE0R0Y4CT3A63

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Allocation Opportunities (the Sub-Fund) promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 70% of its assets following the Multi Asset Sustainability Strategy which includes, but is not limited to, various sustainability strategies and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 70% of its assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (DNSH) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to a qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Allocation Opportunities has the objective to generate long term capital growth by investing in a broad range of asset classes, with a focus on global Equity Markets, Debt Securities and Money Market Instruments in accordance with the Multi Asset Sustainability Strategy.

A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance, and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

Climate Engagement with Outcome Strategy

The Sub-Fund or strategy promotes environmental characteristics through the engagement with the top 10 carbon emitting issuers to encourage their transition pathway to a low carbon economy by setting objectives which are sector specific.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity defined by the Weighted Average GHG Intensity (Sales) of issuers included in the Fund's portfolio. GHG Intensity will be addressed by ensuring a pre-determined year-on-year improvement pathway of the weighted average GHG Intensity on Fund's portfolio level at the Fund's fiscal year ends.

KPI Strategy (Relative)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity of issuers acquired by the Fund defined by the Weighted Average GHG Intensity (Sales). GHG Intensity of the Fund will be addressed by outperforming the Fund's benchmark (respectively the Weighted Average GHG Intensity of the issuers included in the Fund's benchmark) in terms of Weighted Average GHG Intensity.

ESG Score Strategy

A Sub-Fund or strategy managed according to the ESG Score Strategy promotes Environment, Social and Governance factors through the ESG Score Strategy. The ESG Score Strategy aims to measure a company's resilience to long-term risks across the three pillars of Environment, Social and Governance. ESG pillars will be addressed by outperforming the Weighted Average ESG Score of issuers whose shares have been acquired by the Fund against the Weighted Average ESG Score of issuers which are components of Fund's benchmark.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- [What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?](#)

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or

pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

Not applicable.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that our engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Fund assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 10% of the Sub-Fund assets will be invested in Sustainable Investments.

The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable commitment disclosed (min. 10 %).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min.10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Artificial Intelligence

Legal entity identifier: 5299007Y9R7L3FEF1M54

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Artificial Intelligence (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Artificial Intelligence's investment objective is to invest in the global equity markets with a focus on the evolution of artificial intelligence in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned a composite benchmark 50% MSCI AC World (ACWI) Total Return Net + 50% MSCI World Information Technology Total Return Net. This composite benchmark is using market indices. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The composite benchmark uses market indices and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The composite benchmark uses broad market indices.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.msci.com/documents/10199/a71b65b5-d0ea-4b5c-a709-24b1213bc3c5> and at <https://www.msci.com/documents/10199/69aaf9fd-d91d-4505-a877-4b1ad70ee855> or at www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Capital Plus

Legal entity identifier: 529900DH9JBAV7A2IO06

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **1.50%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Capital Plus (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 90% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 90% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Capital Plus's investment objective is to invest in Global Equity and Bond Markets in accordance with the Multi Asset Sustainability Strategy. A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance, and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity defined by the Weighted Average GHG Intensity (Sales) of issuers included in the Fund's portfolio. GHG Intensity will be addressed by ensuring a pre-determined year-on-year improvement pathway of the weighted average GHG Intensity on Fund's portfolio level at the Fund's fiscal year ends.

KPI Strategy (Relative)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity of issuers acquired by the Fund defined by the Weighted Average GHG Intensity (Sales). GHG Intensity of the Fund will be addressed by having a lower Weighted Average GHG Intensity than its benchmark.

ESG Score Strategy

A Sub-Fund or strategy managed according to the ESG Score Strategy promotes Environment, Social and Governance factors through the ESG Score Strategy. The ESG Score Strategy aims to measure a company's resilience to long-term risks across the three pillars of Environment, Social and Governance. ESG pillars will be addressed by outperforming the Weighted Average ESG Score of issuers whose shares have been acquired by the Fund against the Weighted Average ESG Score of issuers which are components of Fund's benchmark.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- [What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?](#)

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 90% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 1.50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1.50%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1.50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1.50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Credit SRI

Legal entity identifier: 549300YBUQOG42TTJR84

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Credit SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Global Credit SRI's investment objective is to invest in global Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

At least 80% of the rated instruments are adhering to the minimum rating threshold of 1,75 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating), and maximum 20% adhering to a minimum rating threshold between 1 and 1,75.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-Fund assets may not be invested in Debt Securities of issuers which provide services in relation to tobacco of more than 10% of their revenues.
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of gambling and/or pornography and/or which are involved in the distribution/sales of gambling and/ or pornography of more than 10% of their revenues and/or which provide services in relation to gambling and/or pornography of more than 10% of their revenues.
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of non-conventional oil and gas and/or which provide services in relation to non-conventional oil and gas of more than 10% of their revenues.
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of alcohol and/or which are involved in the distribution/sales of alcohol of more than 10% of their revenues and/or which provide services in relation to alcohol of more than 20% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments,

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Diversified Dividend

Legal entity identifier: 5299001ECGSGJF4M2L27

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Diversified Dividend (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Global Diversified Dividend's investment strategy is to invest in the global equity markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of Sub-Funds will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to, cash, deposits, Target Funds and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Reduction of investment universe by excluding at least 20% of issuers.

Application of the below sustainable minimum exclusion criteria.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Equity Growth

Legal entity identifier: 5299007LC5RZOIZQJK05

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Equity Growth (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Not applicable

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Equity Growth's investment objective is to invest in global equity markets with a focus on growth stocks in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the MSCI AC World (ACWI) Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- How does the designated index differ from a relevant broad market index?
The benchmark is a broad market index.
- Where can the methodology used for the calculation of the designated index be found?
Details of the Benchmark's methodology may be found at <https://www.msci.com/our-solutions/indexes/acwi>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Equity Insights

Legal entity identifier: 549300ZVWGJLGIGOE86

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Equity Insights (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Equity Insights's investment objective is to invest in global equity markets to achieve a concentrated equity portfolio with a focus on stock selection in accordance with the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)").

The Sub-Fund's strategy is to achieve, at least, a year-on-year improvement pathway on the Sub-Fund's weighted average Sustainability KPI. The Sustainability KPI measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity"). In order to reach this target, the Investment Manager will proceed to yearly checks, comparing the Sub-Fund's Sustainability KPI to the annual improvement pathway (time series) of the Sustainability KPI. The time series will be established at the first day of application of the Sustainability KPI (reference date) using the target annual improvement rate for the prospective fiscal year ends of the Sub-Fund. For each fiscal year end of the time series, the annual improvement rate will be applied to the value of the previous fiscal year end target. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

At least a 5% year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity starting at the reference date September 29, 2023. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Equity Unconstrained

Legal entity identifier: 529900MK0JF6PD64Q806

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Equity Unconstrained (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Not applicable

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Equity Unconstrained's investment objective is to invest in global equity markets to achieve a concentrated equity portfolio with a focus on stock selection in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the MSCI AC World (ACWI) Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.

- How does the designated index differ from a relevant broad market index?

The benchmark is a broad market index.

- Where can the methodology used for the calculation of the designated index be found?

Details of the Benchmark's methodology may be found at <https://www.msci.com/our-solutions/indexes/acwi>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Floating Rate Notes Plus

Legal entity identifier: 529900QOOVX41NDJVJ51

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Floating Rate Notes Plus (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Global Floating Rate Notes Plus' investment objective is to capture income from a global universe of floating-rate notes in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 80% Sub-Fund's portfolio is required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits). While most holdings of the Sub-Fund's will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the below sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-Fund assets may not be invested in Securities of issuers which are involved in the production of weapons, military equipment, and services of more than 5% of their revenues and/or which are involved in the distribution/sales of weapons, military equipment and services and/or which provide services in relation to weapons, military equipment and services of more than 5% of their revenues.
- Sub-Fund assets may not be invested in Securities of issuers which are involved in the production of pornography and/or which are involved in the distribution/sales of pornography of more than 5% of their revenues.
- Sub-fund assets may not be invested in Securities of issuers which are involved in the production of alcohol (limited to spirits) of more than 5% of their revenues and/or which are involved in the distribution/sales of alcohol (limited to spirits) of more than 5% of their revenues.
- Sub-fund assets may not be invested in Securities of issuers which generate more than 5% of their revenue from thermal coal or conventional oil and gas or non-conventional oil and gas-related activities such as exploration, mining, and /or extraction. This includes, but is not limited to, the extraction of tar/oil sands, shale oil, shale gas and arctic drilling.
- Sub-Fund assets may not be invested in Securities of issuers which are involved in the production of gambling of more than 5% of their revenues and/or which are involved in the distribution/sales of gambling of more than 5% of their revenues.

Direct investments in sovereign issuers of countries qualified with a score as "not free" by Freedom House Index¹ are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

¹ The country in question may be found on the Freedom House Index (<https://freedomhouse.org/countries/freedom-world/scores>) in the column "Total Score and Status" of the section "Global Freedom Scores".

- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- What is the policy to assess good governance practices of the investee companies?

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

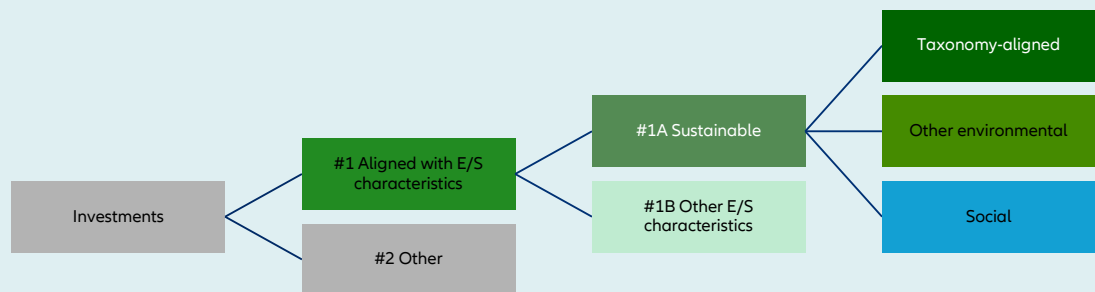

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a

review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global High Yield

Legal entity identifier: 549300Y1G08CCQCSWL61

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global High Yield (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global High Yield's investment objective is to invest in high yield rated Debt Securities of global Bond Markets in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the ICE BOFAML Global High Yield Constrained (hedged) as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.

- **How does the designated index differ from a relevant broad market index?**

The benchmark is a broad market index.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmark’s methodology may be found at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Hi-Tech Growth

Legal entity identifier: 529900VB6HV6W8GMHM45

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Hi-Tech Growth (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether

the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Hi-Tech Growth's investment objective is to invest in global equity markets with a focus on the information technology sector or on an industry which forms part of this sector in accordance with the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)").

The Sub-Fund's strategy is to achieve, at least, a year-on-year improvement pathway on the Sub-Fund's weighted average Sustainability KPI. The Sustainability KPI measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity"). In order to reach this target, the Investment Manager will proceed to yearly checks, comparing the Sub-Fund's Sustainability KPI to the annual improvement pathway (time series) of the Sustainability KPI. The time series will be established at the first day of application of the Sustainability KPI (reference date) using the target annual improvement rate for the prospective fiscal year ends of the Sub-Fund. For each fiscal year end of the time series, the annual improvement rate will be applied to the value of the previous fiscal year end target. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

At least a 5% year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity starting at the reference date September 29, 2023. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

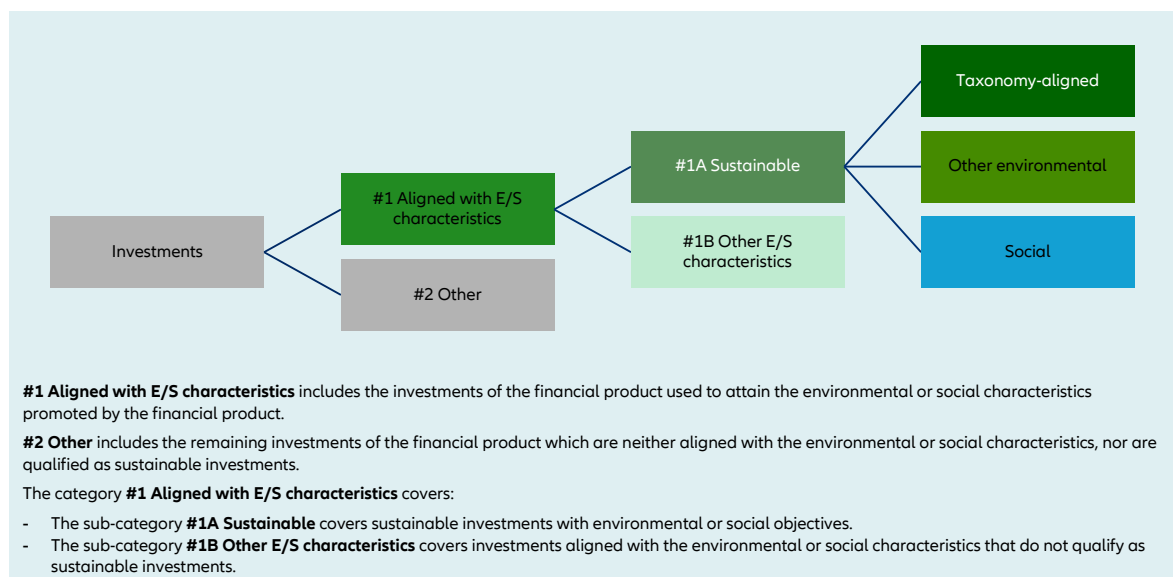

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Inflation-Linked Bond

Legal entity identifier: 529900LYBSN4YHEH3K96

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Inflation-Linked Bond (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Not applicable

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Inflation-Linked Bond's investment objective is to invest in Debt Securities of global Bond Markets with a focus on inflation-linked bonds in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

90% of the rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating), and 10% are adhering to a rating threshold between 1,5 and 2.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

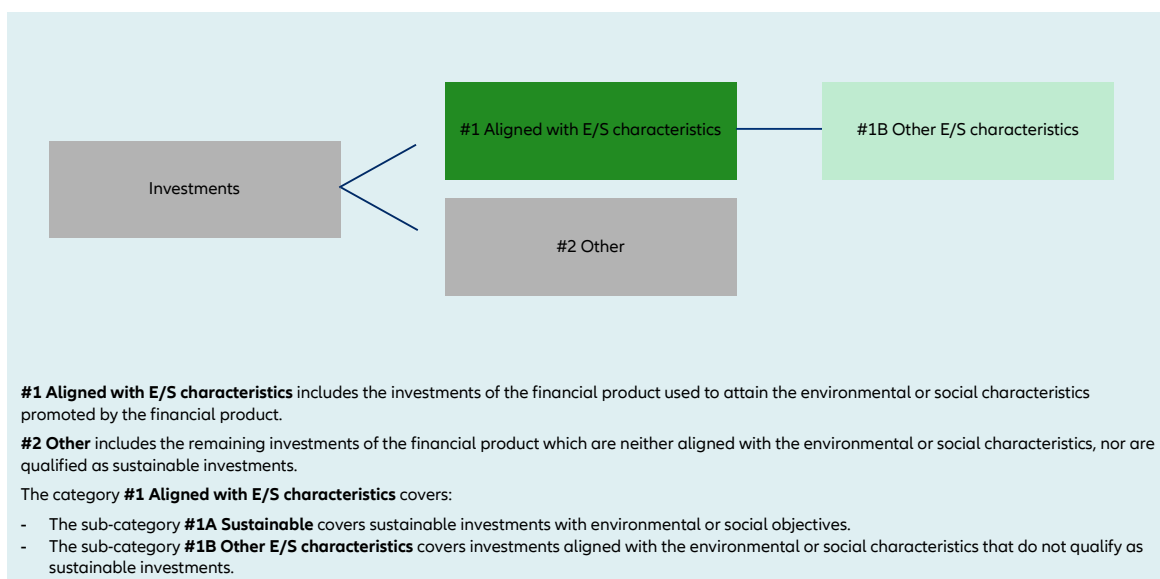

shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Intelligent Cities Income

Legal entity identifier: 529900FV8TUP35Z9PD66

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Intelligent Cities Income (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Intelligent Cities Income's investment objective is to invest in global Equity and Bond Markets with a focus on companies whose business will benefit from or is currently related to evolution of intelligent cities and connected communities in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

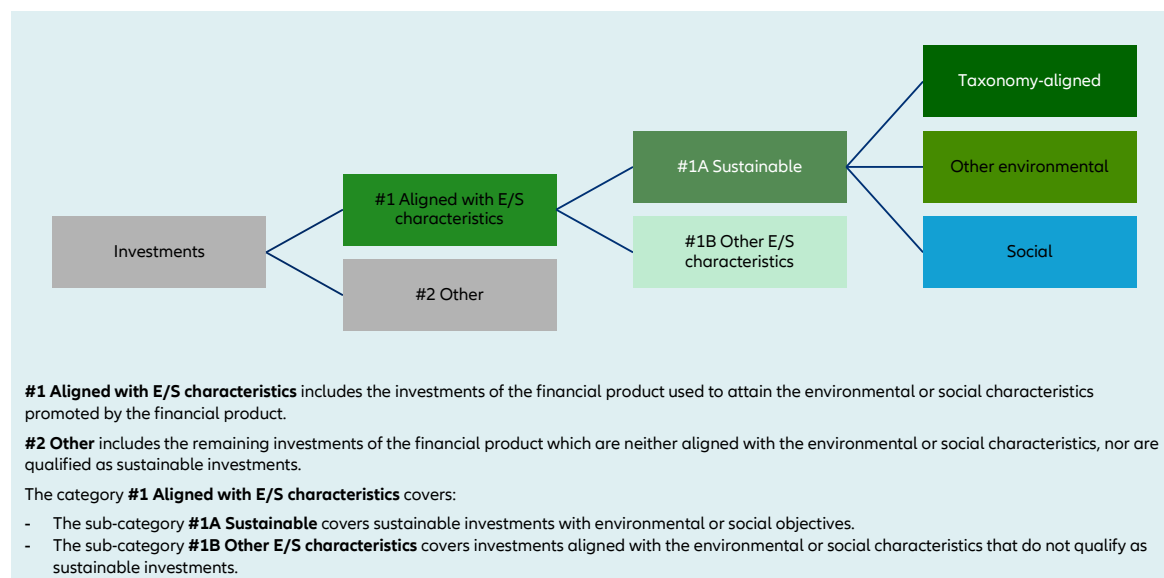

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned a composite benchmark 70% MSCI AC World (ACWI) Total Return Net + 30% ICE BOFAML US Corporate & High Yield Index. This composite benchmark is using market indices. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The composite benchmark uses market indices and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The composite benchmark uses broad market indices.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.msci.com/documents/10199/a71b65b5-d0ea-4b5c-a709-24b1213bc3c5> or at www.msci.com and at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Multi Asset Sustainability Balanced

Legal entity identifier: 549300IVJKX5A2N0KP64

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **3.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Multi Asset Sustainability Balanced (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 70% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 70% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Multi Asset Sustainability Balanced's investment objective is to invest in a broad range of asset classes, with a focus on global equity, bond and money markets in order to achieve over the medium-term a performance comparable to a balanced portfolio consisting of 50% global equity markets and 50% global bond markets in accordance with the Multi Asset Sustainability Strategy. A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio. The strategy commits to reduce the investment universe by at least 20%.

SDG-Aligned

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate on the Sub-Fund level.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

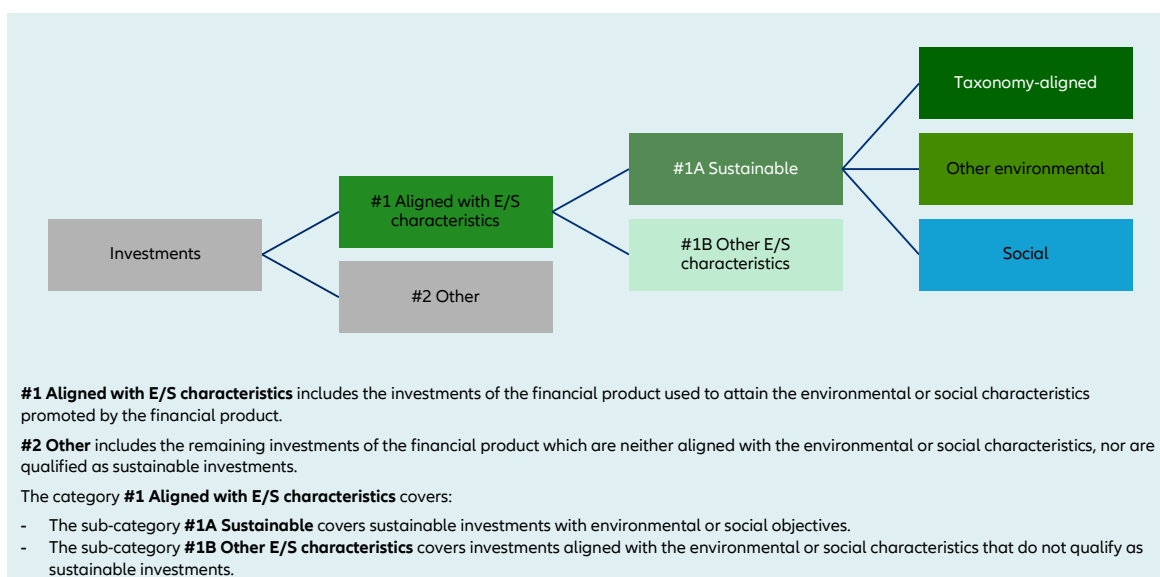

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 3% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments,

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Multi Asset Sustainability Conservative

Legal entity identifier: 549300P41LEQN4RDYC38

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **1.50%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Multi Asset Sustainability Conservative (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 70% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 70% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Multi Asset Sustainability Conservative's investment objective is to invest in a broad range of asset classes, with a focus on global equity, bond and money markets in order to achieve over the medium-term a performance comparable to a balanced portfolio consisting of 25% global equity markets and 75% global bond markets in accordance with the Multi Asset Sustainability Strategy. A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

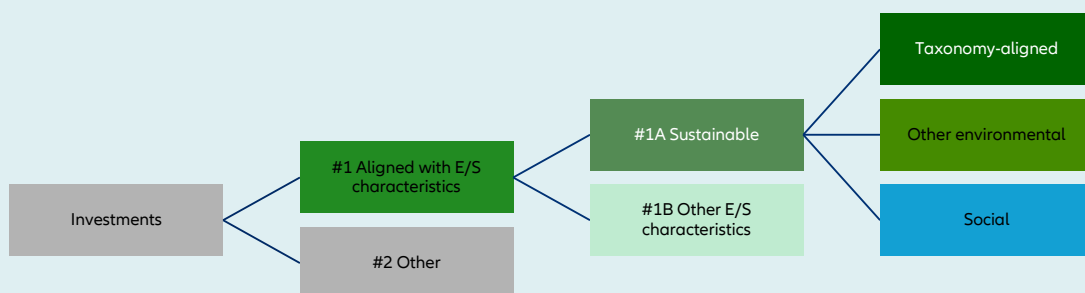

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 1.50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 1.50%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **3.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Multi Asset Sustainability Growth (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 70% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 70% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Multi Asset Sustainability Growth's investment objective is to invest in a broad range of asset classes, with a focus on global equity, bond and money markets in order to achieve over the medium-term a performance comparable to a balanced portfolio consisting of 75% global equity markets and 25% global bond markets in accordance with the Multi Asset Sustainability Strategy. A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- [What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?](#)

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- [What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?](#)

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

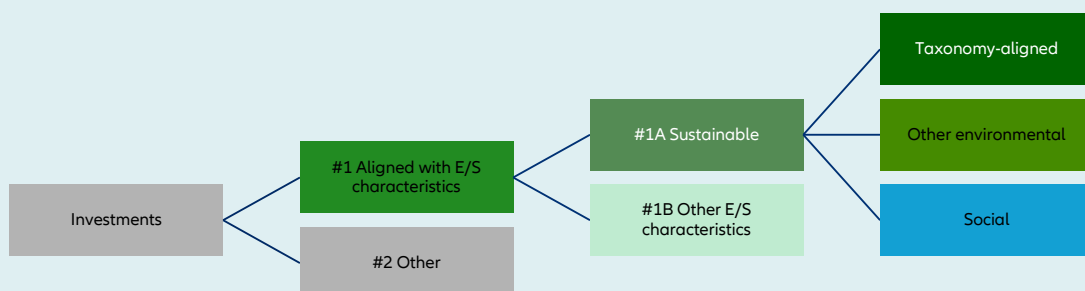

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 3% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Multi-Asset Credit

Legal entity identifier: 549300KHQG2E3AS5HS50

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Multi-Asset Credit (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria applies.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Global Multi-Asset Credit's investment objective is to invest in global Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1,75 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the below sustainable minimum exclusion criteria for direct investments.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Multi-Asset Credit SRI

Legal entity identifier: 529900DL5GK0L1U4FS47

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Multi-Asset Credit SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Global Multi-Asset Credit SRI's investment objective is to invest in global Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1,75 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the below sustainable minimum exclusion criteria for direct investments and Sub-Fund specific exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-Fund assets may not be invested in Debt Securities of issuers which provide services in relation to tobacco of more than 10% of their revenues
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of gambling and/or pornography and/or which are involved in the distribution/sales of gambling and/ or pornography of more than 10% of their revenues and/or which provide services in relation to gambling and/or pornography of more than 10% of their revenues
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of non-conventional oil and gas and/or which provide services in relation to non-conventional oil and gas of more than 10% of their revenues
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of alcohol and/or which are involved in the distribution/sales of alcohol of more than 10% of their revenues and/or which provide services in relation to alcohol of more than 20% of their revenues

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

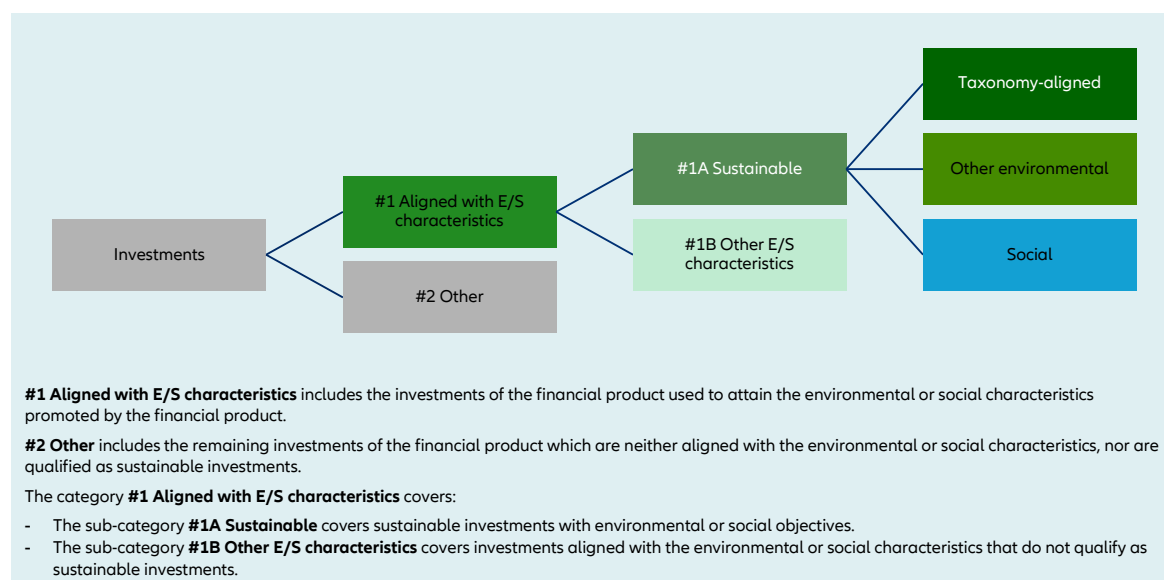

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Sustainability

Legal entity identifier: 529900W68IN4IJ546R85

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Sustainability (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Sustainability's investment objective is to invest in global equity markets of developed countries in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy). The Investment Manager may engage in foreign currency overlay and thus assume separate foreign currency risks with regard to currencies of OECD member states, even if the Sub-Fund does not include any assets denominated in these respective currencies.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an

investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% Sub-Fund's portfolio is required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e.g., cash and deposits). While most holdings of the Sub-Fund's will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

75% of the rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating), and 25% are adhering to a rating threshold between 1.25 and 2.

Reduction of investment universe by excluding at least 20% of issuers.

Application of the below sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

Sub-Fund assets may not be invested in Equities that generate a share of more than 5% of its revenues in the sectors (i) alcohol, (ii) armament, (iii) gambling, and (iv) pornography.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the DOW JONES Sustainability World Index (Total Return) as benchmark

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The Sub-Fund uses an sustainable benchmark which is however not completely aligned with the environmental or social characteristics promoted by the sub-fund. The benchmark uses a best-in-class approach based on ESG criteria. The specific screening and exclusion criteria deviate from the Sub-Fund’s investment strategy.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund’s investment strategy.

- **How does the designated index differ from a relevant broad market index?**

The benchmark uses a best-in-class approach based on ESG criteria for index construction.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the benchmark’s methodology may be found at <https://www.spglobal.com/spdji/en/documents/methodologies/methodology-dj-sustainability-indices.pdf> or at www.spglobal.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Global Water

Legal entity identifier: 529900NQRL4PJUZL0R84

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **50.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Global Water's (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives.
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether

the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest 50% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Global Water's investment objective is to invest in global Equity Markets with a focus on companies with an engagement in the area of water resource management in accordance with the SDG-Aligned Strategy.

The Sub-Fund invests in Equities of companies which offer products and services across themes of water resource management. Companies which engage in the area of water resource management are companies which offer products or services that create positive environmental and social outcomes along water scarcity and quality issues and helps to improve the sustainability of global water resources, as targeted by the SDGs No. 2, 3, 6, 11 and 13.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum 50% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of the Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments. Cash and derivatives are excluded from the aforesaid thresholds.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. Min. 50% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

• **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Green Bond

Legal entity identifier: 549300JPE1XADGY8YM71

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ Yes

☐ No

☒ It will make a minimum of **sustainable investments with an environmental objective: 80.00%**

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Allianz Green Bond (the "Sub-Fund") follows the "Green Bond Strategy". The Green Bond Strategy's objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. Green Bonds are designated Debt Securities intended to encourage sustainability and to support climate-related or other types of special environmental projects. The Sub-Fund invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy. The Sub-Funds will invest at least 80% of its assets in Sustainable investments.

In addition, Sub-Fund specific exclusion criteria apply.

A reference benchmark has been designated for the purpose of meeting the sustainable investment objective.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.
- Actual sustainable investment share.
- Adherence to a minimum SRI Rating of 1 for Green Bonds held in the portfolio (out of a scale from 0- 4; 0 being the worst rating and 4 the best rating).

- **How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH

assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts

are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Investment Manager's Sub-Fund specific exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. Additionally, the data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest more than 80% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production

- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Green Bond's investment objective is to invest in Investment Grade rated Green Bonds of the global Bond Markets denominated in currencies of OECD countries in accordance with the Green Bond Strategy.

The Green Bond Strategy's aim is to invest into Green Bonds that are a specific asset category where the bond proceeds are specifically earmarked to raise money for climate and environmental projects.

The Investment Manager analyses the bond structure to determine whether it is in line with the Green Bond Principles or not. The respect of those four principles below is a prerequisite for a bond to be considered a Green Bond:

- A formal statement in the use of proceeds section of the bond prospectus in question stating that the proceeds will be used to finance "green" / climate projects
- Internal process by the issuer to identify qualifying projects based on sound methodology and clear criteria
- Management of the proceeds to make sure that they will be allocated to the identified projects and not to other general expenses / investments
- Reporting, at least annually, of the status of the use of proceeds, the status of projects and the actual environmental impact

In addition, a Sub-Fund's Investment Manager analyses the projects financed by the Green Bond's proceeds. To be eligible, those projects must be part of the green projects list defined internally by Allianz Global Investors based on research from the Climate Bonds Initiative (CBI), a world-class reputation organisation, which provides a science-based evaluation of the climate change mitigation impacts of the different types of projects.

The Investment Manager completes this analysis by also considering the Environment, Social, Governance, Human Rights and Business behaviour factors in the selection process of an issuer. The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses. Based on a combination of the results of the external and/ or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer. In case the sustainability profile of the issuer is poor as measured by the average SRI Rating, the bonds issued by or from this issuer would not be eligible according to the Green Bond Strategy.

The last step of the Investment Manager's analysis is focused on the credibility of the respective issuer's approach regarding its transition to a low carbon model. The Investment Manager's intention is to favour Green Bonds from such issuers which have set up a sound strategy to mitigate the negative environmental impacts of their activities. The Investment Manager tries to identify such issuers which only make use of the Green Bond market solely for communication / marketing purposes and therefore will not invest in bonds issued by such issuers.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The investment strategy adheres to the following binding elements to attain the sustainable investment objective:

Min. 85% of the Sub-Fund's assets are invested in Green Bonds.

Green Bonds held in the portfolio are adhering to the minimum SRI rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Commitment to a minimum sustainable investment (SI) share of 80%.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Application of the following Sub-Fund specific exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons), and securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies involved in the production of tobacco, and securities of companies involved in the distribution of tobacco with more than 5% of their revenues,
- securities issued by companies that derive more than 30 % of their revenue from thermal coal extraction and securities issued by utility companies that generate more than 30% of their revenues from coal.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation and the minimum share of sustainable investments?

In order to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change the Sub-Fund invests primarily in Green Bonds. Min. 80% of the Sub-Funds' assets will be invested in Sustainable Investments.

The minimum percentage of investments with an environmental objective is 80%. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

• **How does the use of derivatives attain the sustainable investment objective?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The total share of environmentally Sustainable Investments including EU Taxonomy of the Sub-Fund is at least 80%. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy.

are environmentally sustainable investments that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Not sustainable”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Not sustainable” parts of investments are included related to business activities which are not counted as Sustainable Investments. In addition, the Investment Manager might invest into cash, Targets Funds, or derivatives which might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-Fund has assigned the ICE BOFAML GREEN BOND INDEX as a Benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- **How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?**

The Sub-Fund uses a Green Bond Benchmark which is however not completely aligned with the sustainable investment objective promoted by the Sub-Fund. ICE BofA Green Bond Index tracks the performance of securities issued for qualified “green” purposes. Qualifying bonds must have a clearly designated use of proceeds that is solely applied toward projects or activities that promote climate change mitigation or adaptation or other environmental sustainability purposes as outlined by the ICMA Green Bond Principles. The specific screening and exclusion criteria might deviate from the Sub-Fund's investment strategy.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund's investment strategy.

- **How does the designated index differ from a relevant broad market index?**

The benchmark tracks the performance of securities issued for qualified “green” purposes.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmark's methodology may be found at https://www.theice.com/publicdocs/Green_Bond_Index.pdf and at www.theice.com.

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Green Future

Legal entity identifier: 5299000ME98AQUG1H594

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Green Future (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 90% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 90% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Green Future's investment objective is to invest in a broad range of asset classes, in particular in the global bond-, global equity-, and money markets. The Sub-Fund achieves its investment objective by investing in internal SFDR Target Funds.

A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity defined by the Weighted Average GHG Intensity (Sales) of issuers included in the Fund's portfolio. GHG Intensity will be addressed by ensuring a pre-determined year-on-year improvement pathway of the weighted average GHG Intensity on Fund's portfolio level at the Fund's fiscal year ends.

KPI Strategy (Relative)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity of issuers acquired by the Fund defined by the Weighted Average GHG Intensity (Sales). GHG Intensity of the Fund will be addressed by having a lower Weighted Average GHG Intensity than its benchmark.

ESG Score Strategy

A Sub-Fund or strategy managed according to the ESG Score Strategy promotes Environment, Social and Governance factors through the ESG Score Strategy. The ESG Score Strategy aims to measure a company's resilience to long-term risks across the three pillars of Environment, Social and Governance. ESG pillars will be addressed by outperforming the Weighted Average ESG Score of issuers whose shares have been acquired by the Fund against the Weighted Average ESG Score of issuers which are components of Fund's benchmark.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- [What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?](#)

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 90% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Green Transition Bond

Legal entity identifier: 529900QSKNARO960RK57

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Green Transition Bond (the "Sub-Fund") promotes the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund invests primarily in

- Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects
- in Debt Securities whose issuers commit to future improvements in sustainability outcomes
- in Debt Securities issued by sovereign issuers which have been bindingly ratified the Paris Agreement

Sustainable minimum exclusion criteria for direct investments apply.

A composite reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in green transition related assets. This comprises Green Bonds; and issuers explicitly committing to future improvements in sustainability outcomes with a predefined timeline, including but not limited to issuers participating in the Science Based Target (SBT) initiative; as well as Sovereign issuers which have bindingly ratified the Paris Agreement, and which have a sufficient Freedom House Index score. Issuers taking part to the SBT initiative commit defined targets to reduce greenhouse gas (GHG) emissions in line with the agreement as of April 2016 within the United Nations Framework Convention on Climate Change (UNFCCC), on climate change mitigation, adaption, and finance (the "Paris Agreement").
- Adherence to a minimum SRI Rating of 1 for Green Bonds & SBTi issuers held in the portfolio (out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Sub-Funds considers the GHG Intensity PAI indicator for sovereign issuers as sovereigns, which have not bindingly ratified the Paris Agreement, are not investable.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Green Transition Bond's investment objective is to invest in Debt Securities of the Global Bond Markets with a focus on issuers (companies, sovereign and quasi-sovereign issuers) providing positive contribution to sustainable and environmental-friendly solutions and transition into a low-carbon economy in accordance with the Green Transition Strategy.

The Sub-Fund invests primarily:

- in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy, and/or

- securities whose issuers explicitly commit to future improvements in sustainability outcomes within a predefined timeline included, but not limited to, securities from issuers participating to the SBT initiative, and/or
- in Debt Securities issued by sovereign issuers which have bindingly ratified the Paris Agreement, and which have a sufficient Freedom House Index score.

As far as the acquisition of Green Bonds is concerned, the Investment Manager analyses the projects financed by the Green Bond's proceeds. In order to be eligible, such projects have to be part of the green projects list as defined internally by Allianz Global Investors and based on research from the Climate Bonds Initiative (CBI), a world-class reputation organisation, which provides a science-based evaluation of the climate change mitigation impacts of the different types of projects.

The Investment Manager completes this analysis by also considering the Environment, Social, Governance, Human Rights and Business behaviour factors in the selection process of an issuer. The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses. Based on a combination of the results of the external and/ or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer. In case the sustainability profile of the issuer is poor as measured by the average SRI Rating, the bonds issued by or from this issuer would not be eligible.

The last step of the Investment Manager's analysis is focused on the credibility of the respective issuer's approach regarding its individual transition approach to reach to a low carbon model. The Investment Manager's intention is to favour Green Bonds from such issuers which have set up a sound and understandable strategy to mitigate the negative environmental impacts of respective issuers' activities. The Investment Manager tries to identify such issuers which only make use of the Green Bond market solely for communication / marketing purposes and will therefore not invest in bonds issued by such issuers. As far as the securities issued by companies participating to the SBT initiative, are concerned, the Investment Manager considers issuers' commitments to future improvements in sustainability outcomes by analysing companies' ambitions to reduce emissions in line with the Paris Agreement goals. Issuers taking part to the SBT initiative commit defined targets to reduce greenhouse gas (GHG) emissions in line with the agreement as of April 2016 within the United Nations Framework Convention on Climate Change (UNFCCC), on climate change mitigation, adaption, and finance (the "Paris Agreement"). In addition, Debt securities are only eligible if their issuers have set targets which are annually published and monitored. Debt Securities whose issuers participate in the SBT initiative shall be evaluated by an SRI Rating. The proportion of assets which do not have an SRI Rating is expected to be low.

Examples of instruments not attaining to the SRI Rating are cash and deposits, some Target Funds, and investments with temporarily divergent or absent environmental, social, or good governance qualifications.

The Sub-Fund's general investment approach used to achieve the Sub-Fund's investment objective (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- [What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?](#)

The Sub-Fund adheres to the following binding elements to ensure attainment of the environmental or social characteristics:

Min. 80% of the Sub-Fund's assets are invested in Debt Securities in accordance with the Green Transition Strategy which includes green bonds; issuers explicitly committing to future improvements in sustainability outcomes with a predefined timeline, including but not limited to issuers participating in the SBTi; as well as Sovereign issuers which have bindingly ratified the Paris Agreement, and which have a sufficient Freedom House Index score.

Green Bonds and SBTi issuers held in the portfolio are adhering to the minimum SRI rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the below sustainable minimum exclusion criteria and Sub-Fund specific minimum exclusion criteria:

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),

- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sovereign issuers qualified with a score as “Not Free” by the Freedom House Index
- Sovereign issuers that have not ratified the Paris agreement

The minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

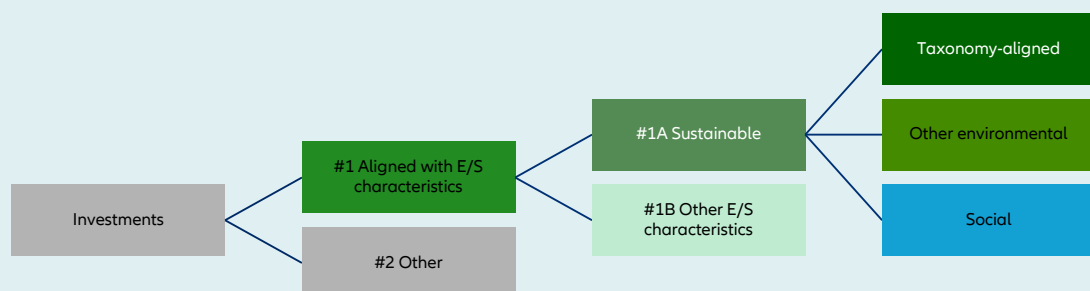

In addition, the Sub-Fund’s Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund’s Investment Manager’s approach to proxy voting and company engagement is set out in the Management Company’s Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds’ assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Green Transition Strategy. Min. 20% of the Sub-Funds’ assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund’s Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund’s Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned 1/3 BLOOMBERG MSCI Global Green Bond Total Return (hedged into USD) + 1/3 BLOOMBERG MSCI Global Corporate Sustainability Total Return (hedged into USD) + 1/3 J.P. MORGAN ESG Emerging Market Bond (EMBI) Global Diversified as composite benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The Sub-Fund uses a composite benchmark with 3 different methodologies:

BLOOMBERG MSCI Global Green Bond Total Return: The benchmark measures the global market for fixed income securities issued to fund projects with direct environmental benefits. The methodology evaluates index-eligible green bonds to ensure they adhere to established Green Bond Principles and to classify bonds by their environmental use of proceeds.

BLOOMBERG MSCI Global Corporate Sustainability Total Return: The benchmark uses ESG criteria that include corporate fixed-rate bonds from both developed and emerging markets issuers with strong positive environmental, social and governance (ESG) ratings [issuers with a ESG Rating greater than or equal to BBB and a ESG Controversy Score greater than 0].

J.P. MORGAN ESG Emerging Market Bond (EMBI) Global Diversified: The Benchmark applies an ESG scoring and screening methodology to tilt toward issuers ranked higher on ESG criteria and green bond, and to underweight and remove issuers that rank lower.

Those benchmarks are not completely aligned with the environmental and social characteristics promoted by the Sub-Fund as specific screening and exclusion criteria might deviate.

- [How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?](#)

The composite benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund's investment strategy.

- [How does the designated index differ from a relevant broad market index?](#)

Those benchmarks use either ESG criteria for index construction or focus on green bonds.

- [Where can the methodology used for the calculation of the designated index be found?](#)

Details of the Benchmarks' methodology may be found at <https://www.msci.com/our-solutions/indexes/bloomberg-msci-esg-fixed-income-indexes> or www.msci.com and <https://www.jpmorgan.com/content/dam/jpm/cib/complex/content/markets/composition-docs/pdf-30.pdf> or www.jpmorgan.com

[Where can I find more product specific information online?](#)

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz High Dividend Asia Pacific Equity

Legal entity identifier: 549300NMGJFNXMUMPO08

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **2.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz High Dividend Asia Pacific Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz High Dividend Asia Pacific Equity's investment objective is to invest in a portfolio of Asia Pacific (excluding Japan) equity market securities, with a potential dividend yield above the market average in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 2% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

• What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 2%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the MSCI AC Asia Pacific Excl. Japan Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.

- **How does the designated index differ from a relevant broad market index?**

The benchmark is a broad market index.

- **Where can the methodology used for the calculation of the designated index be found?**

Details of the Benchmark’s methodology may be found at <https://www.msci.com/documents/10199/0df2ed3c-5fea-4414-b875-55dcd31705ad> or at www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Japan Equity

Legal entity identifier: 529900D7K4CJB8ABAW87

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Japan Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Japan Equity's investment objective is to invest in Japanese Equity Markets in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)").

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

• What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the TOPIX Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at https://www.jpx.co.jp/english/news/detail/detail_665.html

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Pet and Animal Wellbeing

Legal entity identifier: 529900WR8ULGAFRMOS18

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ Yes

☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Pet and Animal Wellbeing (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund will limit its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average sustainable investment share of Sub-Fund Assets.
- The actual share of investments not satisfying the Do No Significant Harm ("DNSH") assessment of Sub-Fund Assets.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the investment Manager considers PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Pet and Animal Wellbeing's investment objective is to invest in global equity markets with a focus on the evolution and development of pet and animal wellbeing in accordance with the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)"). The Sub-Fund's strategy is to target a specific minimum allocation into Sustainable Investments and limit its allocation to DNSH.

The proportion of assets which do not have a Sustainable Investment share assessment is expected to be low. Examples of instruments not having a Sustainable Investment share assessment are cash and deposits, some Target Funds, and investments for which data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The investment strategy adheres to the following binding elements to attain the environmental and/or social characteristics promoted:

Min. 80% of Sub-Fund's portfolio shall be invested in companies which have been assessed according to the Sustainable Investment methodology (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% of weighted-average Sustainable Investment share at Sub Fund Assets. If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Max. 10% of Sub-Fund assets will be invested in securities from issuers not satisfying the Do No Significant Harm ("DNSH") principles.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

• **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

• **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable

• **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable

- How does the designated index differ from a relevant broad market index?

Not applicable

- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Positive Change

Legal entity identifier: 529900BL3ET622OAU93

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **50.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Positive Change's (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives.
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest 50% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Positive Change's investment objective is to invest in global Equity Markets in accordance with the SDG-Aligned Strategy with a focus on companies with an engagement in one or more United Nations' SDGs, and hence create positive outcomes for environment and society. The Sub-Fund invests in Equities of companies which engage in one or more SDGs and offer products and services across the themes of Food Security, Healthcare, Energy Transition, Water, Circular Economy and Social Inclusion as targeted by the SDG No. 1 to 17.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum 50% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of the Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments. Cash and derivatives are excluded from the aforesaid thresholds.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

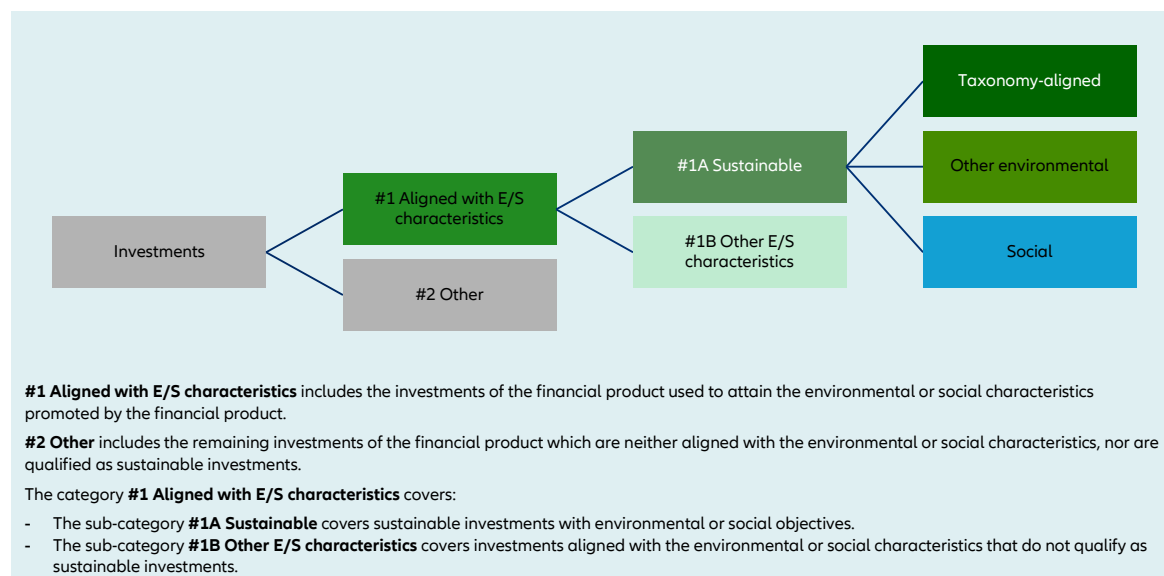

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. Min. 50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments,

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable

Template pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz SDG Euro Credit

Legal entity identifier: 529900IA5IQGQKTAYO36

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ Yes

☐ No

☒ It will make a minimum of **sustainable investments with an environmental objective: 40.00%**

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective 5.00%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

The Sub-Fund will invest more than 80% of its assets in Sustainable Investments and this commitment is achieved through environmentally or socially sustainable investments.

What is the sustainable investment objective of this financial product?

Allianz SDG Euro Credit (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of meeting the sustainable investment objective.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

The Sustainable Investment share is based on the following methodology: Sustainable investments contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The

qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective. To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/ or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (“DNSH”)

and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- [How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?](#)

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- [How have the indicators for adverse impacts on sustainability factors been taken into account?](#)

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- [How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:](#)

The Investment Manager’s sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ Yes
☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the

United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest more than 80% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz SDG Euro Credit's investment objective is to invest in Debt Securities with Investment Grade denominated in Euro of Eurozone or OECD Bond in accordance with the SDG Aligned Strategy Type A with a focus on companies with an engagement in one or more United Nations' SDGs and/ or on securities supporting climate- related or social projects, and hence create positive outcomes for environment and society.

The Sub-Fund invests in Debt Securities of companies which offer products and services across themes. Examples of such themes and topics include, but are not limited to, affordable healthcare, education, energy transition, food security, financial inclusion, water, and waste management as targeted by the SDGs, as well as in Green Bonds, Social Bonds, Sustainable Bonds and Sustainability-Linked bonds.

The assessment of the contribution to the specified SDGs is based in particular on qualitative and quantitative analysis using internal sensitivity scores and revenue attribution as sustainability indicators.

In case of certain Debt Securities which have been issued to support specific environmental, social or sustainable projects, the respective bond proceeds and/or selection of defined SDGs-related Key Performance Indicators (KPIs) indicated in the respective applicable Green Bond Principles/ Social Bond Principles/ Sustainability-Linked Bond Principles – instead of the revenue of the respective Debt Security's issuer – are accounted for the assessment of the contribution to the SDGs.

The Sub-Fund's general investment approach used to achieve the Sub-Fund's investment objective (Sub-Fund's applicable General Asset Class Principles in combination with the Sub-Fund's individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The investment strategy adheres to the following binding elements to attain the Sustainable Investment objective:

Minimum 80% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments, for the remaining 20% (or less) of the Sub-Fund portfolio, each respective issuer shall have a minimum share of at least 5% Sustainable Investment. Cash and derivatives are excluded from these thresholds.

If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Application of the following minimum exclusion criteria, as well as Sub-Fund specific minimum exclusion criteria, for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

Moreover, Sub-Fund specific exclusion criteria for direct investments apply:

- securities issued by companies involved in Arctic Oil Drilling and other unconventional O&G production,
- securities issued by companies involved in Gambling,
- securities issued by companies that derive more than 10% of their revenues from high-proof Alcohol,
- securities issued by companies that derive more than 15% from sales to the Tobacco industry.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific minimum exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

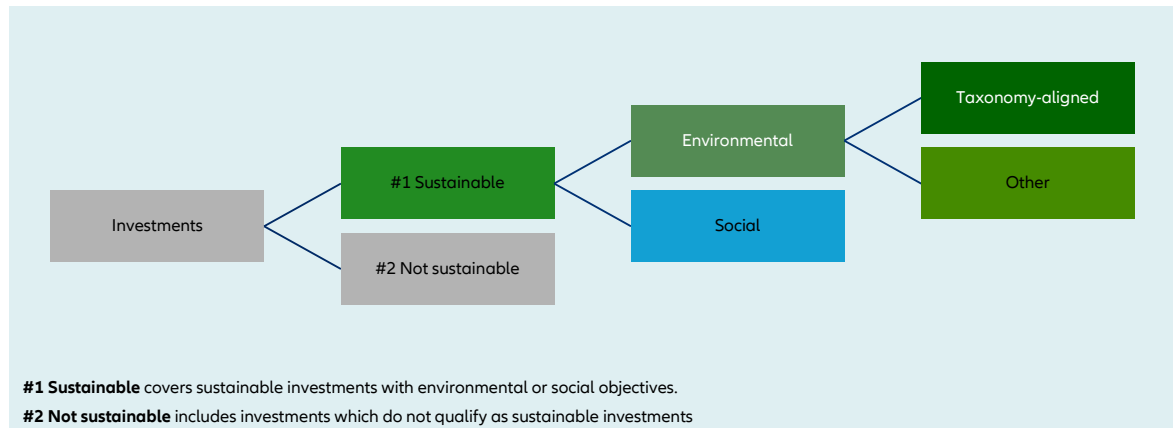

Asset allocation describes the share of investments in specific assets.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. The Sub-Fund will invest more than 80% of its assets in Sustainable Investments.

The minimum percentage of investments with an environmental objective is 40%. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The minimum percentage of investments with a social objective is 5%.

- How does the use of derivatives attain the sustainable investment objective?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The total share of environmentally Sustainable Investments including EU Taxonomy of the Sub-Fund is at least 40%. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. Combined with socially Sustainable Investment the Sub-Fund will invest more than 80% of its assets in Sustainable Investments.

 are environmentally sustainable investments that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The Sub-Fund's investment manager commits to a minimum share of socially Sustainable Investments of 5%. Combined with environmentally Sustainable Investment the Sub-Fund will invest more than 80% of its assets in Sustainable Investments.

What investments are included under “#2 Not sustainable”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Not sustainable” parts of investments are included related to business activities which are not counted as Sustainable Investments. In addition, the Investment Manager might invest into cash, Targets Funds, or derivatives which might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

No reference benchmark has been designated for the purpose of meeting the sustainable investment objective.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Not applicable

- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?

Not applicable

- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz SDG Global Equity

Legal entity identifier: 529900TZLZ3XIEIHC86

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **50.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz SDG Global Equity's (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “sustainable investment objective” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest more than 50% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz SDG Global Equity's investment objective is to invest in global Equity Markets in accordance with the SDG-Aligned Strategy with a focus on companies that contribute to one or more United Nations' SDGs, and hence create positive outcomes for environment and society.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum 50% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of the Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments. Cash and derivatives are excluded from the aforesaid thresholds.

Application of the below sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of hydraulic fracturing and/or which provide services in relation to hydraulic fracturing of more than 5% of their revenues
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of alcohol (limited to spirits) of more than 10% of their revenues
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of agricultural genetically modified organisms -GMOs- of more than 5% of their revenues
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of nuclear power and/or which provide services in relation to nuclear power of more than 10% of their revenues
- Sub-fund assets may not be invested in Equities of issuers which are involved in the production of arctic drilling
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of gambling and/or which are involved in the distribution/sales of gambling and/or which provide services in relation to gambling of more than 5% of their revenues
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production and/or exploration of oil sands of more than 5% of their revenues
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of military equipment and services and/or which are involved in the distribution/sales of military equipment and services and/or which provide services in relation to military equipment and services of more than 5% of their revenues
- Sub-Fund assets may not be invested in Equities of issuers which are involved in the production of pornography of more than 1% of their revenues and/or which are involved in the distribution/sales of pornography of more than 1% of their revenues

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

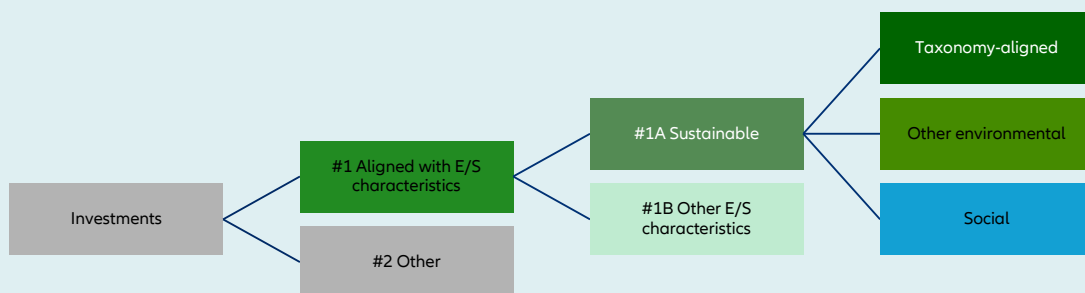

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. Min. 50% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Selection Fixed Income

Legal entity identifier: 549300GHHV2E38CY6D14

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective ___%**

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Selection Fixed Income (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 70% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager, the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

• What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 70% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that exclusion criteria has been adhered to (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy)

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*

Not applicable

- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes

☒ No

The Sub-fund does not consider PAI indicators as binding element of the fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Selection Fixed Income's investment objective is to invest in global bond- and money market funds in accordance with the Multi Asset Sustainability Strategy.

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity defined by the Weighted Average GHG Intensity (Sales) of issuers included in the Fund's portfolio. GHG Intensity will be

addressed by ensuring a pre-determined year-on-year improvement pathway of the weighted average GHG Intensity on Fund's portfolio level at the Fund's fiscal year ends.

KPI Strategy (Relative)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity of issuers acquired by the Fund defined by the Weighted Average GHG Intensity (Sales). GHG Intensity of the Fund will be addressed by having a lower Weighted Average GHG Intensity than its benchmark.

ESG Score Strategy

A Sub-Fund or strategy managed according to the ESG Score Strategy promotes Environment, Social and Governance factors through the ESG Score Strategy. The ESG Score Strategy aims to measure a company's resilience to long-term risks across the three pillars of Environment, Social and Governance. ESG pillars will be addressed by outperforming the Weighted Average ESG Score of issuers whose shares have been acquired by the Fund against the Weighted Average ESG Score of issuers which are components of Fund's benchmark.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes

☒ No

The Sub-fund does not consider PAI indicators as binding element of the fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Selection Small and Mid Cap Equity's investment objective is to invest in European equity markets funds with a focus on smaller and midsized companies in accordance with the Multi Asset Sustainability Strategy.

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity defined by the Weighted Average GHG Intensity (Sales) of issuers included in the Fund's portfolio. GHG Intensity will be

addressed by ensuring a pre-determined year-on-year improvement pathway of the weighted average GHG Intensity on Fund's portfolio level at the Fund's fiscal year ends.

KPI Strategy (Relative)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity of issuers acquired by the Fund defined by the Weighted Average GHG Intensity (Sales). GHG Intensity of the Fund will be addressed by having a lower Weighted Average GHG Intensity than its benchmark.

ESG Score Strategy

A Sub-Fund or strategy managed according to the ESG Score Strategy promotes Environment, Social and Governance factors through the ESG Score Strategy. The ESG Score Strategy aims to measure a company's resilience to long-term risks across the three pillars of Environment, Social and Governance. ESG pillars will be addressed by outperforming the Weighted Average ESG Score of issuers whose shares have been acquired by the Fund against the Weighted Average ESG Score of issuers which are components of Fund's benchmark.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

Application of the following sustainable minimum exclusion criteria for direct investments (with exception of cash, derivatives, external Target Funds, and internal Target Funds not following a sustainable strategy):

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Selective Global High Income

Legal entity identifier: 549300GJL672LFNCCQ34

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Selective Global High Income (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Adherence to a 20% reduction of the investment universe.
- Confirmation that Principal adverse impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Selective Global High Income's investment objective is to invest in global bond markets. The Sub-Fund tries to offer close to high yield returns with an expected volatility between investment grade and high yield in accordance with the Sustainability Key Performance Indicator Strategy (Relative) (“KPI Strategy (Relative)”).

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund’s GHG Intensity (in tCO₂e per Millions of sales). Sales represent company’s annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer’s sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer’s greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party

data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 90% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 30% lower than its benchmark in terms of Weighted Average GHG Intensity.

Reduction of investment universe by excluding at least the 20% the highest GHG Intensity issuers.

Lower than the Benchmark excluding the 20% highest GHG Intensity issuers in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments

Asset allocation describes the share of investments in specific assets.

that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the ICE BOFAML BB-B Global High Yield Index (hedged) as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Short Duration Global Bond SRI

Legal entity identifier: 549300OYIOIK6HSXWK48

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Short Duration Global Bond SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether

the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Short Duration Global Bond SRI's investment objective is to invest in global Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

At least 80% of the rated instruments are adhering to the minimum rating threshold of 1,75 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating), and maximum 20% adhering to a minimum rating threshold between 1 and 1,75.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-Fund assets may not be invested in Debt Securities of issuers which provide services in relation to tobacco of more than 10% of their revenues
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of gambling and/or pornography and/or which are involved in the distribution/sales of gambling and/ or pornography of more than 10% of their revenues and/or which provide services in relation to gambling and/or pornography of more than 10% of their revenues
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of non-conventional oil and gas and/or which provide services in relation to non-conventional oil and gas of more than 10% of their revenues
- Sub-fund assets may not be invested in Debt Securities of issuers which are involved in the production of alcohol and/or which are involved in the distribution/sales of alcohol of more than 10% of their revenues and/or which provide services in relation to alcohol of more than 20% of their revenues

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

- [How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?](#)

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Smart Energy

Legal entity identifier: 5299001HEJY28N2P7I26

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **50.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Smart Energy's (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives.
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest 50% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Smart Energy's investment objective is to invest in global Equity Markets with a focus on companies with an engagement in the area of transition of energy usage in accordance with the SDG-Aligned Strategy.

The Sub-Fund invests in Equities of companies which offer products and services across themes of transition of energy usage. Companies which engage in the transition of energy usage are companies which offer products or services with active positive contribution to the shift away from fossil fuels, enhancing resilience of the sustainable energy infrastructure, creating renewable sources of energy generation, energy storage systems and improving efficacy and access to energy consumption, as targeted by the SDGs No. 7, 9, 11, 12, and 13.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum 50% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of the Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments. Cash and derivatives are excluded from the aforesaid thresholds.

Application of the below sustainable minimum exclusion criteria for direct investments and Sub-Fund specific exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

Sub-Fund assets must not be invested in companies whose revenues exceed 30% origin from upstream oil or coal mining or power generation from these fuels.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

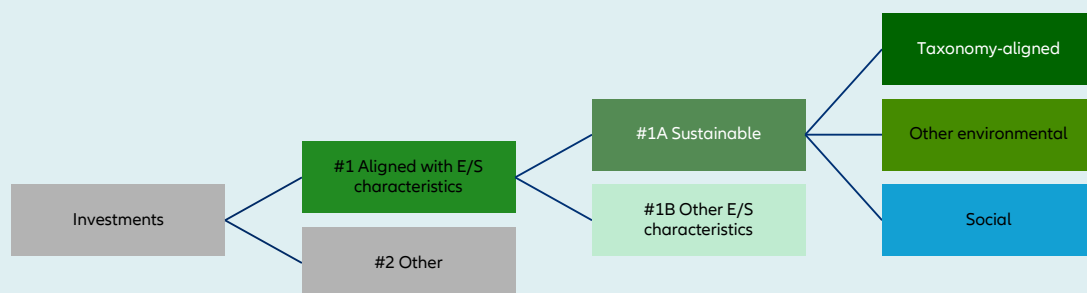

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. Min. 50% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Social Conviction Equity

Legal entity identifier: 529900RICS54KA4ZV927

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ Yes

☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **30.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Social Conviction Equity (the Sub-Fund) promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio. The Sub-Fund will prioritize the social factor by investing in companies with a superior social profile, that are either companies (i) that provide products and/or services that have a positive social contribution (which includes, among other things, health and the welfare of society) and/or (ii) companies that are deemed to exhibit a superior social profile by the investment manager's discretionary assessment by taking into consideration both qualitative and quantitative social indicators.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy
guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Social Conviction Equity's investment strategy is to invest in the Eurozone equity markets with a focus on companies that have a superior social profile in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an

investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.

- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of Sub-Fund's portfolio is required to have an SRI Rating (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of Sub-Funds will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to, cash, deposits, Target Funds and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Reduction of the investment universe by excluding the worst 20% rated issuers.

Application of the below sustainable minimum exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Fund's assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 30% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 30%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 30%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 30%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Strategy4Life Europe 40

Legal entity identifier: 529900VGMX20P6DTP861

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **30.00%** of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Strategy4Life Europe 40 (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 2 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Not applicable

- How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How have the indicators for adverse impacts on sustainability factors been taken into account?*
Not applicable
- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*
Not applicable

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Strategy4Life Europe 40's investment objective is to invest in European Equity, European Bond and Money Markets in order to achieve over the medium-term a performance comparable to a balanced portfolio within a volatility range of 3% - 9%. The assessment of the volatility of the capital markets by the Investment Manager is an important factor in this process, with the aim of typically not falling below or exceeding a volatility of the Share price within a range of 3% - 9% on a medium to long-term average, similar to a portfolio consisting of 40% European Equity Markets and 60% medium-term Euro Bond Markets in accordance with the Sustainable and Responsible Investment

Strategy (SRI Strategy). In times of high volatility / low volatility the equity market-oriented portion will be reduced / will be increased.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 2 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of investments with an environmental objective that are not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments.

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable

- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable

- How does the designated index differ from a relevant broad market index?

Not applicable

- Where can the methodology used for the calculation of the designated index be found?

Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Sustainable Health Evolution

Legal entity identifier: 529900QNFA91WJ6M3Q96

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **50.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Sustainable Health Evolution's (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development Goals (SDGs) or the EU Taxonomy objectives, which are also related to the SDGs. The contribution is measured according to the Sustainable Investment methodology.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the Sub-Fund's sustainable investment objective the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual Sustainable Investment share – which is based on SDGs or EU Taxonomy objectives
- Principle Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are considered as part of the requirement of the Sub-Fund to invest 50% into Sustainable Investments. PAI indicators are used as part of the DNSH assessment. Investments in securities of issuers who do not pass the DNSH assessment are not counted as sustainable investments.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Energy consumption intensity per high impact climate sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- GHG Intensity
- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Sustainable Health Evolution's investment objective is to invest in global Equity Markets with a focus on companies with an engagement in the area of health innovation and promotion in accordance with the SDG- Aligned Strategy.

The Sub-Fund invests in Equities of companies which offer products and services across themes of health innovation and promotion. Companies which engage in the area of health innovation and promotion are companies offering products or services that enable a healthy and sustainable lifestyle through (i) preventing illness (fitness, nutrition and lifestyle changes to help reduce the risk of disease), (ii) prescribing treatment (medicine, therapy, surgery etc. to help lessen the symptoms and effects of a disease) and (iii) prolonging life (technology, tools, research, science etc. to lengthen life span) as targeted by the SDG's No. 2, 3, 6, 11 and 12.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum 50% of the Sub-Fund assets' weighted average shall result from revenue generated from issuers' activities that facilitate the achievement of one or more SDG or EU Taxonomy objectives as measured according to the Sustainable Investment methodology.

For at least 80% of the Sub-Fund portfolio, the respective issuer shall have a minimum share of 20% Sustainable Investments. Cash and derivatives are excluded from the aforesaid thresholds.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

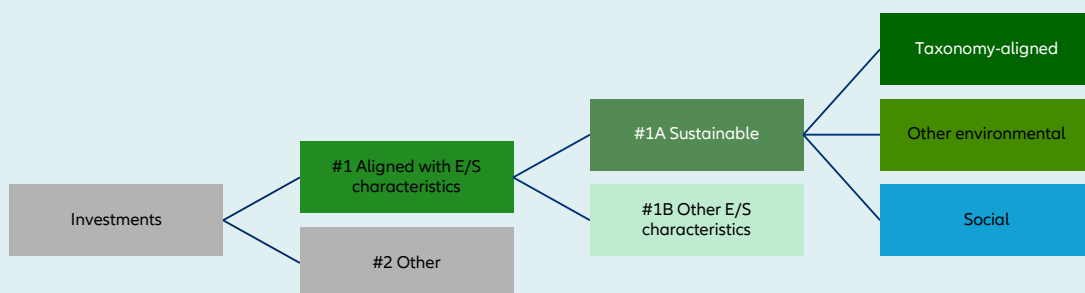

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. The Sub-Fund invest primarily into securities which offer products and services to facilitate the achievements of the SDGs. Min. 50% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 50%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Sustainable Multi Asset 75

Legal entity identifier: 529900A943LOFBAFNR54

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Sustainable Multi Asset 75 (the "Sub-Fund") promotes a broad range of environmental and/or social characteristics. The Sub-Fund invests at least 70% of its assets following the "Multi Asset Sustainability Strategy" which includes, but is not limited to, various sustainability strategies of the management company and/or, invests in Green Bonds and/or Social Bonds, and/or Sustainability Bonds and/or SFDR Article 8 & 9 Target Funds ("SFDR Target Funds").

Depending on the sustainability strategy selected by the Investment Manager the promoted environmental and/or social characteristics could comprise environmental, social, human rights, governance, business behaviour factors or investments in companies providing solutions that create positive environmental and social outcomes.

In addition, sustainable minimum exclusion criteria and Sub-Fund specific exclusion criteria for direct investments apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the Multi Asset Sustainability Strategy the Investment Manager allocates at least 70% of Fund's assets in various sustainability approaches.

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's assets invested in Green Bonds, and/or Social Bonds, and/or Sustainability Bonds and/or in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.
- In case the Investment Manager decides to directly invest in Debt or Equity Securities as part of the Multi Asset Sustainability Strategy the adherence to the respective binding element will be reported.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Sustainable Multi Asset 75's investment objective is to invest in a broad range of asset classes, with a focus on global Equity, Bond, and Money Markets in order to achieve over the medium-term a performance comparable to a balanced portfolio within a volatility range of 10% to 16% in accordance with the Multi Asset Sustainability Investment Strategy. The assessment of the volatility of the capital markets by the Investment Manager is an important factor in this process, with the aim of typically not falling below or exceeding a volatility of the share price within a range of 10% to 16% on a medium to long-term average, similar to a portfolio consisting of 75% global Equity Markets and 25% Euro denominated Bond Markets. A Sub-Fund managed according to the Multi Asset Sustainability Strategy (“MAS Strategy”) invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

In case of direct investments in Equities and/or Debt Securities, the Sub-Fund's Investment Manager may choose one or more of the below strategies that promote environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective:

SRI Strategy

The Sub-Fund or strategy promotes environmental and social characteristics through integrating environmental, social, human rights, governance and business behaviour factors into the Sub-Fund's investment process through a best-in-class approach. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating that it is used to construct the portfolio.

SDG-Aligned & SDG-Aligned Type A Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to invest in Equities and/or in Debt Securities of companies providing solutions that create positive environmental and social outcomes, as assessed by the contribution of companies' outputs to the attainment of one or more of the SDGs or other Sustainable Investment objectives, which the Sub-Fund's Investment Manager may additionally determine and to which the companies contribute to.

Green Bond Strategy

The Sub-Fund's or strategy's Sustainable Investment objective is to mobilize capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change. The Sub-Fund or strategy invests primarily in Green Bonds financing climate change mitigation or adaptation projects or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.

Green Transition Strategy

The Sub-Fund or strategy promotes environmental and/or social characteristics through the mobilization of capital markets towards the transition to a low carbon society, natural capital preservation and adaptation to climate change.

KPI Strategy (Absolute)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity defined by the Weighted Average GHG Intensity (Sales) of issuers included in the Fund's portfolio. GHG Intensity will be addressed by ensuring a pre-determined year-on-year improvement pathway of the weighted average GHG Intensity on Fund's portfolio level at the Fund's fiscal year ends.

KPI Strategy (Relative)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") promotes environmental objectives by applying an investment objective related to an environmental key performance indicator referred to as "Sustainability KPI" to provide transparency on the measurable sustainability outcome pursued. The "Sustainability KPI" to be measured is the GHG Intensity of issuers acquired by the Fund defined by the Weighted Average GHG Intensity (Sales). GHG Intensity of the Fund will be addressed by having a lower Weighted Average GHG Intensity than its benchmark.

ESG Score Strategy

A Sub-Fund or strategy managed according to the ESG Score Strategy promotes Environment, Social and Governance factors through the ESG Score Strategy. The ESG Score Strategy aims to measure a company's resilience to long-term risks across the three pillars of Environment, Social and Governance. ESG pillars will be addressed by outperforming the Weighted Average ESG Score of issuers whose shares have been acquired by the Fund against the Weighted Average ESG Score of issuers which are components of Fund's benchmark.

KPI Strategy (Absolute Threshold)

A Sub-Fund or strategy managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- [What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?](#)

A Sub-Fund managed according to the Multi Asset Sustainability Strategy ("MAS Strategy") invests in (i) Equities and / or Debt Securities of companies that either provide for environmental and/or social characteristics and/or pursue activities contributing to an environmental or social objective and / or invests (ii) in Green Bonds and/or Social Bonds, and/or in Sustainability Bonds and/or (iii) in SFDR Target Funds.

Overall, the Investment Manager is required to invest min 70% of Sub-Fund's assets in SFDR Target Funds and/or in Equities and/or Debt Securities in accordance with the Multi Asset Sustainability Strategy.

The following sustainable minimum exclusion criteria for direct investments apply:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

The following Sub-Fund specific exclusion criteria for direct investments apply:

- Sub-fund assets may not be invested in securities of (corporate and sovereign) issuers of Lebanon, Saint Barthelemy and Ukraine
- Sub-Fund assets may not be invested in securities issued by companies that are active in the palm oil industry and less than 50% of the respective company's revenue in palm oil is certified by RSPO (Roundtable on Sustainable Palm Oil)
- Sub-Fund assets may not be invested in securities issued by companies which are involved in the production of gambling and/or which are involved in the distribution/sales of gambling and/or which provide services in relation to gambling of more than 10% of their revenues
- Sub-Fund assets may not be invested in securities issued by companies that derive more than 10% of their revenues from unconventional oil & gas extraction
- Sub-Fund assets may not be invested in securities issued by conventional oil and gas producing companies that generate less than 40% of their revenues from natural gas and or renewable energy.
- Sub-Fund assets may not be invested in securities issued by electricity generating companies with a carbon intensity above the threshold set by the Climate Paris Agreement or, if carbon intensity is not available, no more than 10% of their electricity production is based on coal and/or no more than 30% of electricity production is based on oil and gas and/or no more than 30% of their electricity production is based on nuclear energy.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria, as well as the Sub-Fund specific exclusion criteria, are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

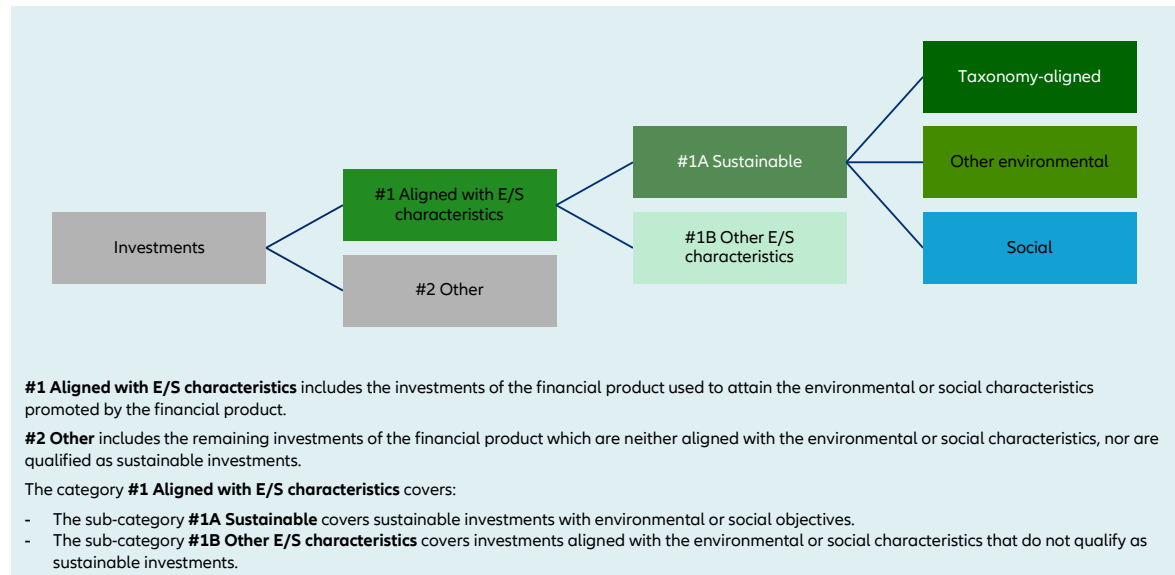

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment

with temporarily divergent or absent environmental, social, or good governance qualifications or investments outside of the specified quota to be invested as part of the Multi Asset Sustainability Strategy. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- [How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?](#)

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments,

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Systematic Enhanced US Equity SRI

Legal entity identifier: 5299002WOGP7C2R2FD60

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **20.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Systematic Enhanced US Equity SRI (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating) is compared to the actual percentage of the benchmarks best-in-class issuers.
- Adherence to a 20% reduction of the investment universe
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Allianz Systematic Enhanced US Equity SRI's investment objective is to invest in US Equity Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy). The Investment Manager may engage in foreign currency overlay and thus assume separate foreign currency risks with regard to currencies of OECD member states, even if the Sub-Fund does not include any assets denominated in these respective currencies.

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 90% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

80% of the rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Reduction of investment universe by excluding at least 20% of issuers.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund commits to reduce the investment universe by at least 20%.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 90% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 20% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable

investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 20%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned MSCI USA ESG Screened Index as benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The Sub-Fund uses an ESG Screened benchmark which is however not completely aligned with the environmental or social characteristics promoted by the sub-fund. The MSCI USA ESG Screened Index exclude companies associated with controversial, civilian, nuclear weapons and tobacco, companies that derive revenues from thermal coal and oil sands extraction or that are not in compliance with the United Nations Global Compact (UNGC) principles. The indexes incorporate these exclusions while seeking to maintain a profile similar to market cap indexes.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as the screening and exclusion criteria of the benchmark deviate from the Sub-Fund's investment strategy.
- **How does the designated index differ from a relevant broad market index?**
The benchmark uses ESG exclusion criteria for index construction.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmarks' methodology may be found at <https://www.msci.com/esg-screened-indexes> or at www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Target Maturity Euro Bond I

Legal entity identifier: 529900AGQHNHIYLXHR90

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Target Maturity Euro Bond I (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How have the indicators for adverse impacts on sustainability factors been taken into account?**

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to a qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- **How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Target Maturity Euro Bond I's investment objective is to invest in Debt Securities of Global bond markets (Euro denominated) in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)")

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

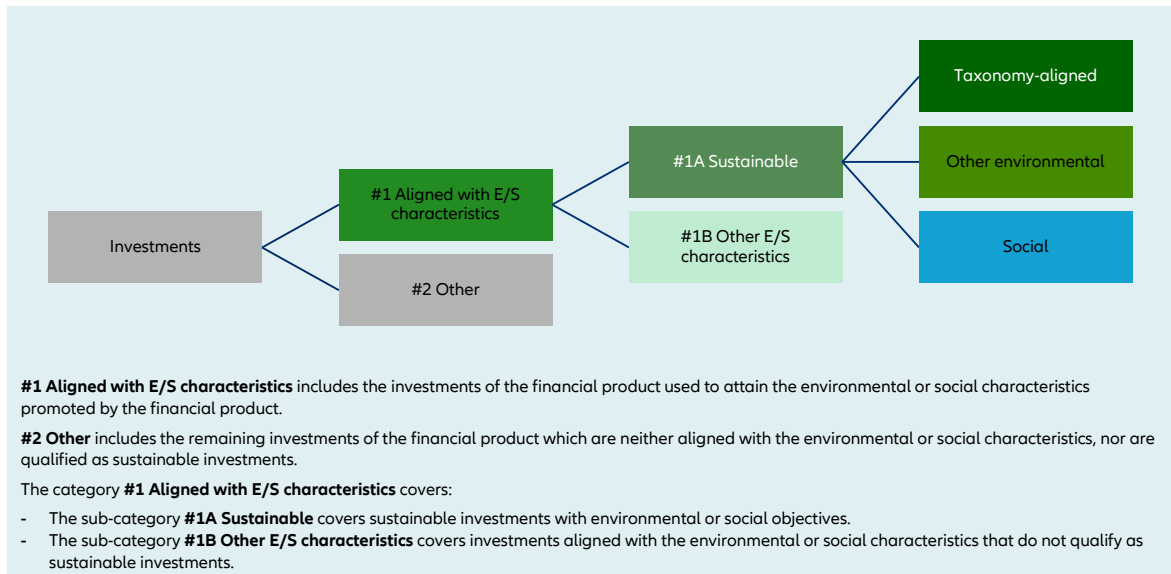

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

Asset allocation describes the share of investments in specific assets.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the ICE BofA Euro Corporate Index as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Target Maturity Euro Bond II

Legal entity identifier: 529900Q9BL9FG9DCDZ05

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Target Maturity Euro Bond II (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How have the indicators for adverse impacts on sustainability factors been taken into account?**

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to a qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- **How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Target Maturity Euro Bond II's investment objective is to invest in Debt Securities of Global bond markets (Euro denominated) in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)")

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the ICE BofA Euro Corporate Index as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Target Maturity Euro Bond III

Legal entity identifier: 529900YTC9IHB6RCQ908

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Target Maturity Euro Bond III (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources

4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- [How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?](#)

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- [How have the indicators for adverse impacts on sustainability factors been taken into account?](#)

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to a qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- [How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:](#)

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ Yes
- ☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogeneous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Target Maturity Euro Bond III's investment objective is to invest in Debt Securities of Global bond markets (Euro denominated) in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)")

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that our engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Investment Manager does not commit to a split of minimum taxonomy alignment into transitional and enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the ICE BofA Euro Corporate Index as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Target Maturity Euro Bond IV

Legal entity identifier: not identified

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Target Maturity Euro Bond IV (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by outperforming the Weighted Average GHG Intensity against its benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria (with exception of cash, derivatives, external Target Funds and internal Target Funds not following a sustainability strategy).

- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources

4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm (DNSH) and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- [How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?](#)

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- [How have the indicators for adverse impacts on sustainability factors been taken into account?](#)

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to a qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- [How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:](#)

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

- ☒ Yes
- ☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogeneous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment Manager considers GHG related PAI indicators by outperforming the Weighted Average GHG Intensity against its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Target Maturity Euro Bond IV's investment objective is to invest in Debt Securities of Global bond markets (Euro denominated) in accordance with the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)")

The Sub-Fund's strategy is to outperform the Weighted Average GHG Intensity against its benchmark. The outperformance is determined as the excess between the Sub-Fund's weighted average GHG Intensity and the Sub-Fund's benchmark Weighted Average GHG Intensity.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more <GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits))

Min. 20% outperformance of benchmark in terms of Weighted Average GHG Intensity

Application of the below sustainable minimum exclusion criteria.

The following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

Not applicable.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that our engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Fund assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Fund assets will be invested in Sustainable Investments.

The minimum percentage of investments that are aligned with the EU Taxonomy is 0,01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Investment Manager does not commit to a split of minimum taxonomy alignment into transitional and enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable commitment disclosed (min.5 %).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min.5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned ICE BofA Euro Corporate Index as benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.theice.com/market-data/indices/fixed-income-indices>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Thematica

Legal entity identifier: 5493004ZRV2CSS15YF05

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **30.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Thematica (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)") which targets a specific minimum allocation into Sustainable Investments. Sustainable investments are investments in economic activities which contribute to environmental and/or social objectives, for which the Investment Managers uses as reference frameworks the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy.

Furthermore, the Sub-Fund will limit its allocation into issuers which significantly harm environmental and/or social objectives.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The actual weighted average sustainable investment share of Sub-Fund Assets.
- The actual share of investments not satisfying the Do No Significant Harm ("DNSH") assessment of Sub-Fund Assets.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the investment Manager considers PAI indicators by limiting its allocation into issuers which significantly harm environmental and/or social objectives.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz Thematica's investment objective is to invest in global Equity Markets with a focus on theme and stock selection in accordance with the Sustainability Key Performance Indicator Strategy (Absolute Threshold) ("KPI Strategy (Absolute Threshold)"). The Sub-Fund's strategy is to target a specific minimum allocation into Sustainable Investments and limit its allocation to DNSH.

The proportion of assets which do not have a Sustainable Investment share assessment is expected to be low. Examples of instruments not having a Sustainable Investment share assessment are cash and deposits, some Target Funds, and investments for which data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The investment strategy adheres to the following binding elements to attain the environmental and/or social characteristics promoted:

Min. 80% of Sub-Fund's portfolio shall be invested in companies which have been assessed according to the Sustainable Investment methodology (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 30% of weighted-average Sustainable Investment share at Sub Fund Assets. If the Investment Manager acquires a use of proceed security, which finance specific projects contributing to environmental or social objectives, the overall investment is considered to contribute to environmental and/or social objectives according to the Sustainable Investment methodology.

Max. 15% of Sub-Fund assets will be invested in securities from issuers not satisfying the Do No Significant Harm ("DNSH") principles.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

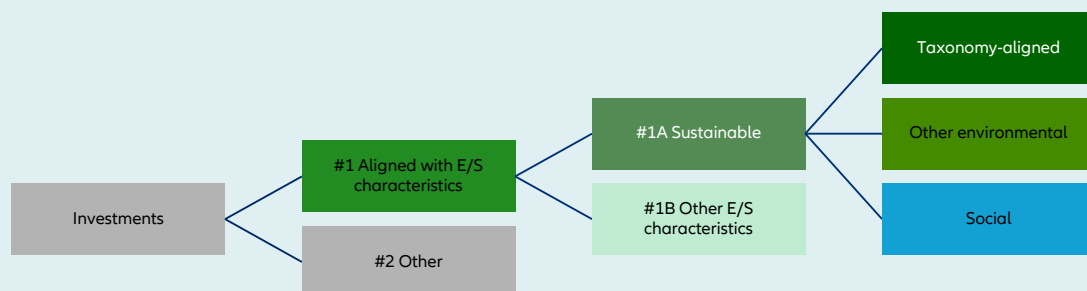

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 30% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 30%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

☐ Yes

☐ In fossil gas

☐ In nuclear energy

☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 30%).

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 30%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable

- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Total Return Asian Equity

Legal entity identifier: 549300K61J05QBE7CP78

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective: __%**

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **2.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective __%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Total Return Asian Equity (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits))
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Total Return Asian Equity’s investment objective is to invest in the equity markets of the Republic of Korea, Taiwan, Thailand, Hong Kong, Malaysia, Indonesia, the Phillippines, Singapore and/or the PRC in accordance with the Sustainability Key Performance Indicator Strategy (Relative) (“KPI Strategy (Relative)”).

The Sub-Fund’s strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund’s GHG Intensity (in tCO₂e per Millions of sales). Sales represent company’s annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer’s sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer’s greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

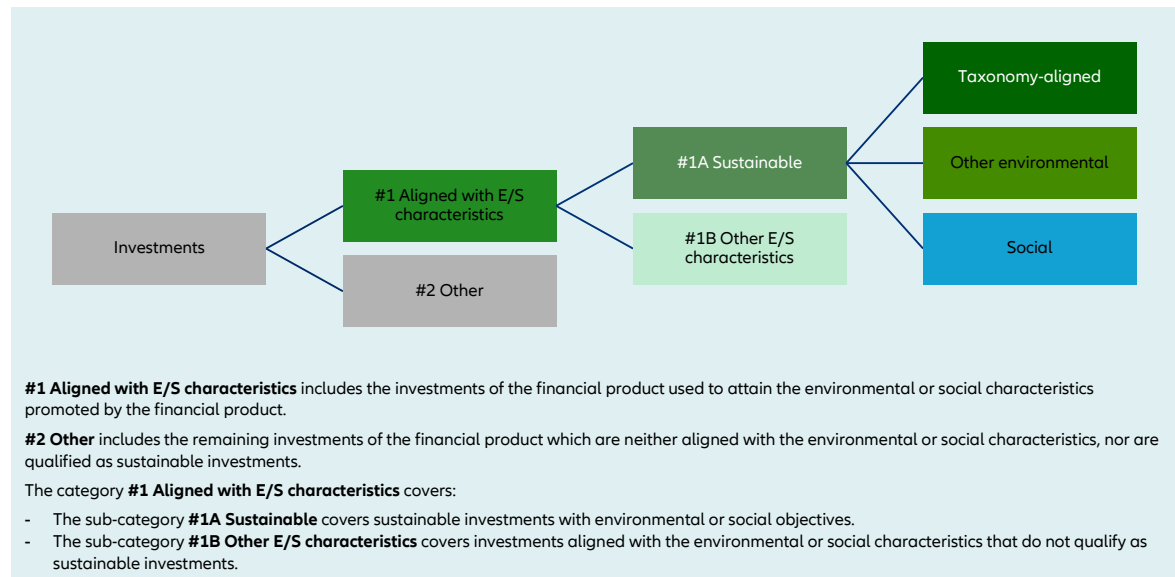

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 2% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable

investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2%).

- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 2%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 2%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the MSCI AC Asia Excl. Japan Total Return Net as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.msci.com/documents/10199/9995ff24-2232-4373-97b5-f5cb276d3b93> or at www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz Treasury Short Term Plus Euro

Legal entity identifier: 549300RZL4PEFWYY4H53

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **5.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz Treasury Short Term Plus Euro (the "Sub-Fund") promotes environmental, social, human rights, governance, and business behaviour factors (this domain does not apply for sovereigns issued by a Sovereign Entity) through integration of a best-in-class approach into the Sub-Fund's investment process. This encompasses the evaluation of corporate or sovereign issuers based on an SRI Rating which is used to construct the portfolio.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature (e. g., cash and deposits)) assets invested in best-in-class issuers (issuers with a minimum SRI Rating of 1 out of a scale from 0-4; 0 being the worst rating and 4 the best rating).
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager considers PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the "binding elements" section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, PAI indicators are, among other sustainability factors, applied to derive the SRI Rating. The SRI Rating is used for the portfolio construction.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz Treasury Short Term Plus Euro's investment objective is to invest in Debt Securities with Euro Exposure of Eurozone Bond Markets in accordance with the Sustainable and Responsible Investment Strategy (SRI Strategy).

As part of the SRI best-in-class approach, the Sub-Fund takes environmental, social, human rights, governance, and business behaviour factors into account as follows:

- The aforesaid sustainability factors are analysed through SRI Research by the Investment Manager in order to assess how sustainable development and long-term issues are taken into account in the strategy of an issuer. SRI Research means the overall process of identifying potential risks as well as potential opportunities of an investment in securities of an issuer related to the analysis of sustainability factors. SRI Research data combines external research data (which might have some limitations) with internal analyses.
- Based on a combination of the results of the external and/or internal analyses of the sustainability factors, an internal rating is derived monthly (SRI Rating) and is afterwards assigned to a corporate or sovereign issuer.

This internal SRI Rating is used to rank and select or weight securities for the portfolio construction.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Minimum rating coverage: At least 70% of the Sub-Fund's portfolio is required to have an SRI Rating (portfolio in this respect does not comprise non-rated derivatives and instruments that are non-rated by nature e.g., cash and deposits). While most holdings of the Sub-Fund will have a corresponding SRI Rating some investments cannot be rated according to the SRI Research methodology. Examples of instruments not attaining to the SRI Rating include, but are not limited to cash, deposits, Target Funds, and non-rated investments.

The rated instruments are adhering to the minimum rating threshold of 1 (out of a rating scale from 0 – 4; 0 being the worst rating and 4 the best rating).

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Investment Manager believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Investment Manager believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Sub-Fund's Investment Manager is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares). The Sub-Fund's Investment Manager's approach to proxy voting and company engagement is set out in the Management Company's Stewardship Statement.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash and non-rated derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 5% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

Asset allocation describes the share of investments in specific assets.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

• **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 5%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?
Not applicable
- How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?
Not applicable
- How does the designated index differ from a relevant broad market index?
Not applicable
- Where can the methodology used for the calculation of the designated index be found?
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz US Investment Grade Credit

Legal entity identifier: 529900XTY5ODOFJVZ671

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz US Investment Grade Credit (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Relative) ("KPI Strategy (Relative)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by having a lower Weighted Average GHG Intensity of Sub-Fund than Weighted Average GHG Intensity of Sub-Fund's benchmark.

In addition, sustainable minimum exclusion criteria apply.

A reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits))
- The actual weighted average GHG Intensity portfolio vs weighted average GHG Intensity of the benchmark.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by having a lower Weighted Average GHG Intensity than its benchmark.

The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

What investment strategy does this financial product follow?

Allianz US Investment Grade Credit's investment objective is to invest in investment grade rated corporate Debt Securities of US Bond Markets denominated in USD in accordance with the Sustainability Key Performance Indicator Strategy (Relative) (“KPI Strategy (Relative)”).

The Sub-Fund's strategy is to have a lower Weighted Average GHG Intensity than its benchmark.

The weighted average GHG Intensity is the weighted average of the Sub-Fund’s GHG Intensity (in tCO₂e per Millions of sales). Sales represent company’s annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The ratio is in tCO₂e per Millions of sales. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer’s sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer’s greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

Min. 20% lower than its benchmark in terms of Weighted Average GHG Intensity.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

Asset allocation describes the share of investments in specific assets.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

- **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

• **What is the minimum share of investments in transitional and enabling activities?**

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Yes, the Sub-Fund has assigned the Bloomberg US Corporate Total Return as a benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by having a lower Weighted Average GHG Intensity than its benchmark.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
The benchmark is a market index and does not incorporate environmental or social characteristics for index construction.
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
The benchmark is not continuously aligned as it does not incorporate environmental or social characteristics for index construction.
- **How does the designated index differ from a relevant broad market index?**
The benchmark is a broad market index.
- **Where can the methodology used for the calculation of the designated index be found?**
Details of the Benchmark's methodology may be found at <https://www.bloomberg.com/quote/LUACTRUU:IND>

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz US Large Cap Value

Legal entity identifier: 529900PCEKY03SO2GS40

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **10.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz US Large Cap Value (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund's Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager's investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway. The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz US Large Cap Value's investment objective is to invest in the US Equity Markets with a focus on value stocks in accordance with the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)").

The Sub-Fund's strategy is to achieve, at least, a year-on-year improvement pathway on the Sub-Fund's weighted average Sustainability KPI. The Sustainability KPI measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity"). In order to reach this target, the Investment Manager will proceed to yearly checks, comparing the Sub-Fund's Sustainability KPI to the annual improvement pathway (time series) of the Sustainability KPI. The time series will be established at the first day of application of the Sustainability KPI (reference date) using the target annual improvement rate for the prospective fiscal year ends of the Sub-Fund. For each fiscal year end of the time series, the annual improvement rate will be applied to the value of the previous fiscal year end target. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 80% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

At least a 5% year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity starting at the reference date February 2, 2024. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction,
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

- **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 80% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 10% of the Sub-Funds' assets will be invested in Sustainable Investments. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. The Sub-Fund's Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Taxonomy-aligned investments include debt and/or equity in environmentally sustainable economic activities aligned with the EU-Taxonomy. The minimum percentage of investments that are aligned with the EU Taxonomy is 0.01%. Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not reflect any data in government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

Taxonomy-aligned activities in this disclosure are based on share of turnover. Pre-contractual figures use turnover as its financial metric as a default in line with the regulatory requirements and based on the fact that complete, verifiable or up-to date data for CAPEX and/or OPEX as financial metric is even less available.

Taxonomy-aligned data is only in rare cases data reported by companies in accordance with the EU Taxonomy. The data provider has derived Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that this Sub-Fund does not provide for a binding minimum quota for investments in sovereign bonds. Therefore, this Sub-Fund may have (but must not have) an exposure to sovereign bonds. In the absence of a binding minimum quota for investments in sovereign bonds, this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments,

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min 10%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable

Where can I find more product specific information online?

More product-specific information can be found on the website: <https://regulatory.allianzgi.com/SFDR>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name:

Allianz US Short Duration High Income Bond

Legal entity identifier: 549300AGX4LFUYBR5189

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?

☒ ☐ Yes

☒ ☐ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: __%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of **3.00%** of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective** __%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Allianz US Short Duration High Income Bond (the "Sub-Fund") is managed according to the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)") which addresses greenhouse gas (GHG) Intensity. The "Sustainability KPI" measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity").

GHG Intensity will be addressed by ensuring a year-on-year improvement pathway of the weighted average GHG Intensity on portfolio level for the prospective fiscal year ends of the Sub-Fund.

In addition, sustainable minimum exclusion criteria apply.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and reported on, at the fiscal year end:

- The actual percentage of KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).
- The year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity.
- Confirmation that Principal Adverse Impacts (PAIs) of investment decisions on sustainability factors are considered through the application of exclusion criteria.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

Sustainable investments contribute to environmental and/or social objectives, for which the Investment Manager uses as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy:

1. Climate Change Mitigation
2. Climate Change Adaptation
3. Sustainable Use and Protection of Water and Marine Resources
4. Transition to a Circular Economy
5. Pollution Prevention and Control
6. Protection and Restoration of Biodiversity and Ecosystems

The assessment of the positive contribution to the environmental or social objectives is based on a proprietary framework which combines quantitative elements with qualitative inputs from internal research. The methodology applies first a quantitative breakdown of a securities issuer into its business activities. The qualitative element of the framework is an assessment if business activities contribute positively to an environmental or a social objective.

To calculate the positive contribution on the Sub-Fund level the revenue share of each issuer attributable to business activities contributing to environmental and/or social objectives is considered provided the issuer is satisfying the Do No Significant Harm ("DNSH") and Good Governance principles, and an asset-weighted aggregation is performed as a second step. Moreover, for certain types of securities, which finance specific projects contributing to environmental or social objectives the overall investment is considered to contribute to environmental and/or social objectives, but also for these a DNSH as well as a Good Governance check for issuers is performed.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

In order to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective, the Investment Manager is leveraging the PAI indicators, whereby significance thresholds have been defined to identify significantly harmful issuers. Issuers not meeting the significance threshold can be engaged for a limited time period to remediate the adverse impact. Otherwise, if the issuer does not meet the defined significance thresholds twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

All mandatory PAI indicators are considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have been defined and they refer to qualitative or quantitative criteria.

Recognizing the lack of data coverage for some of the PAI indicators equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

- ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Investment Manager's sustainable minimum exclusion list screens out companies based on their involvement in controversial practices against international norms. The core normative framework consists of the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles for Business and Human Rights. Securities issued by companies having a severe violation of these frameworks will be restricted from the investment universe.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

☐ No

The Management Company has joined the Net Zero Asset Manager Initiative and considers PAI indicators through stewardship including engagement, both are relevant to mitigate potential adverse impact as a company.

Due to the commitment to the Net Zero Asset Manager Initiative, the Management Company aims to reduce greenhouse gas emissions in partnership with asset owner clients on decarbonisation goals, consistent with an ambition to reach net zero emission by 2050 or sooner across all assets under management. As part of this objective the Management Company will set an interim target for the proportion of assets to be managed in line with the attainment of net zero emissions by 2050 or sooner.

The Sub-Fund’s Investment Manager addresses PAI indicators regarding greenhouse gas emission, biodiversity, water, waste as well as social and employee matters for corporate issuers, and, where relevant, the freedom house index is applied to investments in sovereigns. PAI indicators are considered within the Investment Manager’s investment process through the means of exclusions as described in the “binding elements” section of the Sub-Fund.

The data coverage for the data required for the PAI indicators is heterogenous. The data coverage related to biodiversity, water and waste is low and the related PAI indicators are considered through exclusion of securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption issues. Therefore, the Investment Manager will strive to increase data coverage for PAI indicators with low data coverage. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Additionally, the Investment manager considers GHG related PAI indicators by ensuring a Weighted Average GHG Intensity improvement pathway. The following PAI indicators are considered:

Applicable to corporate issuers

- GHG Emissions
- Carbon footprint
- GHG Intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste ratio
- Violation of UN Global compact principles
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles
- Board gender diversity
- Exposure to controversial weapons

Applicable to sovereign and supranational issuers

- Investee countries subject to social violations

The information on the PAI indicators will be available in the end-year report of the Sub-Fund.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Allianz US Short Duration High Income Bond's investment objective is to invest in short duration high yield rated corporate Debt Securities of US Bond Markets in accordance with the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)").

The Sub-Fund's strategy is to achieve, at least, a year-on-year improvement pathway on the Sub-Fund's weighted average Sustainability KPI. The Sustainability KPI measures the GHG Intensity defined by the weighted average intensity of greenhouse gas emissions based on a company's annual sales ("GHG Intensity"). In order to reach this target, the Investment Manager will proceed to yearly checks, comparing the Sub-Fund's Sustainability KPI to the annual improvement pathway (time series) of the Sustainability KPI. The time series will be established at the first day of application of the Sustainability KPI (reference date) using the target annual improvement rate for the prospective fiscal year ends of the Sub-Fund. For each fiscal year end of the time series, the annual improvement rate will be applied to the value of the previous fiscal year end target. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

The weighted average GHG Intensity is the weighted average of the Sub-Fund's GHG Intensity (in tCO₂e per Millions of sales). Sales represent company's annual sales. This ratio of GHG normalized by Sales facilitates comparison between companies of different sizes. The metric allows comparing weighted average GHG Intensities of different portfolios to identify portfolios comprised of more GHG-efficient issuers in terms of the issuer's sales. The portfolio weights (and benchmark or universe weights) are rebased such that only issuers with GHG emissions data available are considered in the calculation. GHG represents a respective issuer's greenhouse gas emissions. To determine the GHG Intensity of a company issuer, GHG Intensity data from third party data providers will be used. The GHG intensity is analysed by the Investment Manager and is considered within the securities selection process in order to meet the Sub-Fund Investment objective.

The proportion of assets which do not have a GHG intensity assessment is expected to be low. Examples of instruments not having a GHG intensity assessment are cash and deposits, some Target Funds, and investments for which the GHG intensity is deemed to be not appropriate and/or data is not available.

The Sub-Fund's general investment approach (Sub-Fund's applicable General Asset Class Principles in combination with its individual investment restrictions) is described in the prospectus.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The binding elements are:

Min. 70% KPI coverage of the Sub-Fund's Portfolio (Portfolio in this respect does not comprise derivatives and instruments that are non-evaluated by nature (e. g., cash and deposits)).

At least a 5% year-on-year improvement pathway of the Sub-Fund's Weighted Average GHG Intensity starting at the reference date May 30, 2023. For the period between Reference Point and the first fiscal year end a pro rata temporis rate of the annual rate will be applied.

Application of the following sustainable minimum exclusion criteria for direct investments:

- securities issued by companies having a severe violation / breach of principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights on the grounds of problematic practices around human rights, labour rights, environment, and corruption,
- securities issued by companies involved in controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- securities issued by companies that derive more than 10% of their revenues from weapons, military equipment, and services,
- securities issued by companies that derive more than 10% of their revenue from thermal coal extraction
- securities issued by utility companies that generate more than 20% of their revenues from coal,
- securities issued by companies involved in the production of tobacco, and securities issued by companies involved in the distribution of tobacco with more than 5% of their revenues.

Direct investments in sovereign issuers with an insufficient freedom house index score are excluded.

The sustainable minimum exclusion criteria are based on information from an external data provider and coded in pre- and post-trade compliance. The review is performed at least half yearly.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Fund does not commit to reduce the scope of the investments by a certain minimum rate.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

• **What is the policy to assess good governance practices of the investee companies?**

Good governance principles are considered by screening out companies based on their involvement in controversies around international norms corresponding to the four good governance practices: sound management structures, employee relations, remuneration of staff and tax compliance. Companies having a severe violation in either of those areas will not be investible. For certain cases, flagged issuers shall be on a watch list. These companies will appear on this watch list when the Management Company believes that engagement may lead to improvements or when the company is assessed to take remedial actions. Companies on the watch list remain investible unless the Management Company believes that the engagement or the remedial actions of the company does not lead to the desired remedy of the severe controversy.

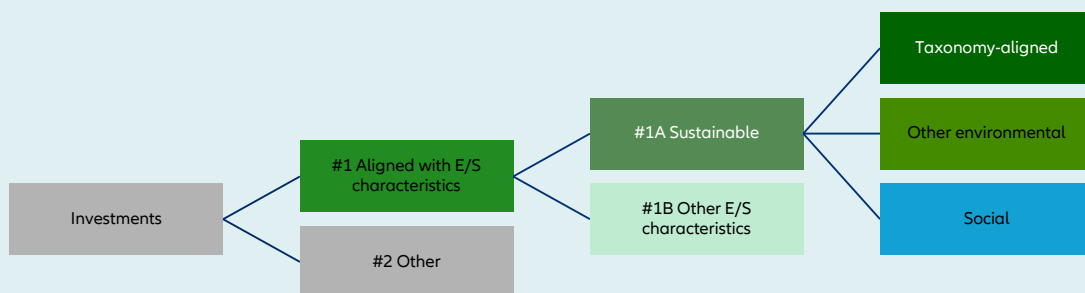

In addition, the Management Company is committed to actively encourage open dialogues with investee companies on corporate governance, proxy voting and broader sustainability issues in advance of shareholder meetings (regularly for direct investments in shares).

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Min. 70% of the Sub-Funds' assets (excluding cash, and derivatives) are used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund might contain assets which do not promote environmental or social characteristics. Example of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications. Min. 3% of the Sub-Funds' assets will be invested in Sustainable Investments. The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy nor to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The Sub-Fund's Investment Manager does not commit to a minimum share of socially sustainable investments. While the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

• **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

Not applicable

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund's Investment Manager does not commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies,
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy,
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

- ☐ Yes
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

The Sub-Fund does not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, as result of this investment strategy, investments may occur in corporates which are also active in these activities. Further information will be provided as part of the annual reporting, if relevant.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds *

2. Taxonomy-alignment of investments excluding sovereign bonds *

This graph represents X% of the total investments.

It is noted that – due to the fact that this Sub-Fund does not provide for a minimum quota of taxonomy-aligned investments – this graph does not generate any additional added value compared to the left-hand graph.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

- What is the minimum share of investments in transitional and enabling activities?

The Sub-Fund's Investment Manager does not commit to a split of minimum taxonomy alignment into transitional, enabling activities and own performance.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Taxonomy-aligned investments are considered a sub-category of Sustainable Investments. If an investment is not Taxonomy-aligned since the activity is not yet covered under the EU Taxonomy or the positive contribution is not substantial enough to comply with the Taxonomy technical screening criteria, the investment can still be considered an environmentally Sustainable Investment provided it complies with all criteria. The Investment Manager does not commit to a minimum share of environmentally Sustainable Investments that are not aligned with the EU Taxonomy. The overall sustainable investment share may also include investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Investment Manager defines Sustainable Investments based on internal research, which uses, among others, the UN Sustainable Development Goals (SDGs), as well as the objectives of the EU Taxonomy as reference frameworks. The Investment Manager does not commit to a minimum share of socially Sustainable Investments, as the SDGs contain environmental as well as social objectives. The overall sustainable investment share may

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

also include investments with a social objective, and while the Sub-Fund cannot commit to a minimum share of environmentally or socially sustainable investments, such investments may be freely allocated to within the Sub-Fund aggregated sustainable investment commitment disclosed (min. 3%).

What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

Under “#2 Other” investments into cash, Target Funds, or derivatives can be included. Derivatives might be used for efficient portfolio management (including risk hedging) and/or investment purposes, and Target Funds to benefit from a specific strategy. For those investments no environmental or social safeguards are applied.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**
Not applicable
- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**
Not applicable
- **How does the designated index differ from a relevant broad market index?**
Not applicable
- **Where can the methodology used for the calculation of the designated index be found?**
Not applicable
