## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund US Small Caps

## 1. Basic details

---

### Name

US Small Caps

### Date of incorporation

26 February 1998

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk.** Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The sub-fund's portfolio is managed passively.

More information with respect to this can be found under the 'Benchmark-tracking' title.

The assets are invested primarily in equities (or equity-related investments) figuring in the MSCI USA Small Cap - Net return index.

The investments underlying this sub-fund do not take into account the EU criteria for environmentally sustainable economic activities.

## Benchmark-tracking

**The objective of the sub-fund is to track the composition of a benchmark in accordance with and within the limits of Article 63 of the Royal Decree of 12 November 2012 on the undertakings for collective investment complying with the conditions of Directive 2009/65/EC.**

Benchmark(s) in question: MSCI USA Small Cap - Net return index, which consists of a selection of stocks of smaller U.S. listed companies, covering all sectors. Additional information on this benchmark and its composition can be found on the following website: [www.msci.com](http://www.msci.com).

Benchmark tracking method: physical replication using Optimized Sampling. The benchmark is tracked using a selection of shares in the benchmark in order to best replicate the benchmark. In addition, an optimisation algorithm is used that balances the risk and the return of each of the portfolio positions, so optimising the selection. The sub-fund may also make limited use of synthetic replication by way of futures, primarily in order to cushion the effects of buying and selling, and to avoid the attendant transaction charges.

The benchmark is rebalanced every quarter. The more often an benchmark is rebalanced, the greater the potential impact on the transaction charges within the sub-fund.

Given normal market conditions, the expected tracking error is between 0% and 1%. Possible causes of this tracking error could be the method used to track the benchmark, transaction charges, dividend reinvestment, the general costs charged to the sub-fund, any income from lending financial instruments .

**If the composition of the benchmark is no longer sufficiently diversified or if the benchmark is no longer sufficiently representative of the market it relates to or if the value and composition of the benchmark is no longer published in a suitable manner, the management company will inform the Board of Directors without delay. The Board of Directors will consider what action to take in the interest of investors and may convene a general meeting of shareholders in order to amend the investment policy.**

**Required disclaimers for benchmark providers:**

This fund is not sponsored, endorsed, sold or promoted by MSCI INC. ('MSCI'), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the 'MSCI parties'). The MSCI indexes are the exclusive property of MSCI. MSCI and the MSCI index names are service mark(s) of MSCI or its affiliates and have been licensed for use for certain purposes by KBC Asset Management. None of the MSCI parties makes any representation or warranty, express or implied, to the issuer or owners of this fund or any other person or entity regarding the advisability of investing in funds generally or in this fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to this fund or the issuer or owners of this fund or any other person or entity. None of the MSCI parties has any obligation to take the needs of the issuer or owners of this fund or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI parties is responsible for or has participated in the determination of the timing of, prices at, or quantities of this fund to be issued or in the determination or calculation of the equation by or the consideration into which this fund is redeemable. Further, none of the MSCI parties has any obligation or liability to the issuer or owners of this fund or any other person or entity in connection with the administration, marketing or offering of this fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI parties makes any warranty, express or implied, as to results to be obtained by the issuer of the fund, owners of the fund, or any other person or entity, from the use of any MSCI index or any data included therein. None of the MSCI parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI parties makes any express or implied warranties of any kind, and the MSCI parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No purchaser, seller or holder of this fund, or any other person or entity, should use or refer to any MSCI trade name, trademark or service mark to sponsor, endorse, market or promote this fund without first contacting MSCI to determine whether MSCI's permission is required. Under no circumstances may any person or entity claim any affiliation with MSCI without the prior written permission of MSCI.

**Transparency of adverse sustainability impacts**

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors ('PAI') as described by the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ('SFDR').

In particular, the sub-fund takes into account exposure to controversial weapons ('indicator 14') by excluding companies involved in controversial weapon systems.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account within the limited limits inherent to passive management through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

KBC Asset Management NV exercises the voting rights of the shares it manages in accordance with the Proxy Voting and Engagement Policy. Where appropriate, KBC Asset Management NV will engage in dialogue with the management of the companies concerned, if necessary before voting.

Information on the principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

**Volatility of the net asset value**

The volatility of the net asset value may be high due to the composition of the portfolio.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                                   | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                                              | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                               |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                               |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | moderate                                                          | since there will be invested in the shares of companies that have a lower market capitalisation, there is a risk that a position cannot be sold quickly at a reasonable price.                                    |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : none                         |                                                                                                                                                                                                                   |
|                           |                                                                                                                                     | For the share class Institutional B Shares : none                 |                                                                                                                                                                                                                   |
|                           |                                                                                                                                     | For the share class Institutional Discretionary Shares EUR : high | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Institutional Shares EUR : high               | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low                                                               |                                                                                                                                                                                                                   |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                     | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup> at 2 pm CET)<br>also referred to as 'Dealing Day'                                         | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup> at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup> at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# US Small Caps - Institutional Discretionary Shares EUR

**This share class is reserved**

- for trading to persons who acquire and hold the units on the basis of a discretionary management agreement with KBC Asset Management NV (except a discretionary management agreement 'Core Satellite'), or with another company associated with KBC Asset Management NV and who pay a discretionary management fee on the part of their portfolio invested in KBC UCIs<sup>1</sup>. In addition, these persons must have the status of 'eligible investors', acting on its own behalf, as within the meaning of Article 5 § 3/1 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables<sup>2</sup>. The investor must comply with these conditions at the time of subscription and for as long as the investor remains a shareholder of the share class.
- for trading to institutional undertakings for collective investment managed by KBC Asset Management NV or by another company associated with this management company and who pay a fee on the part of the assets invested in KBC UCIs.

If it appears that the shares of this class are held by persons other than those authorized, these shares will be converted at no cost (except taxes) into shares of the share class "Classic Shares".

# US Small Caps - Institutional Shares EUR

This share class is reserved for institutional investors, as defined in Article 5 § 3 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, and requires a minimum subscription of 10000 EUR (both during as well as after the initial subscription period). The investor must have the status of institutional investor at the moment of subscription and for as long as the investor remains a shareholder of the share class. If it appears that the shares of this class of shares are held by persons other than authorized, these shares will be converted at no cost (except taxes) into shares of the share class 'Classic Shares'.

# Information concerning the sub-fund USA & Canada

## 1. Basic details

---

### Name

USA & Canada

### Date of incorporation

24 November 1999

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The assets are, directly or indirectly, mainly invested in shares of companies from North America.

The investments underlying this sub-fund do not take into account the EU criteria for environmentally sustainable economic activities.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors ('PAI') as described by the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ('SFDR')

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy. More information on the principal adverse impact indicators that are taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

KBC Asset Management NV exercises the voting rights of the shares it manages in accordance with the Proxy Voting and Engagement Policy. Where appropriate, KBC Asset Management NV will engage in dialogue with the management of the companies concerned, if necessary before voting.

Information on the principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI North America-Net Return index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will to a large extent be similar to that of the benchmark.

The benchmark is also used to assess the performance of the sub-fund.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is 3.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of the MSCI data is permitted without MSCI's express written consent.

**Volatility of the net asset value**

The volatility of the net asset value may be high due to the composition of the portfolio.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |          | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low      |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low      |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low      |                                                                                                                                                                                                                   |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | high     | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low      |                                                                                                                                                                                                                   |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | moderate | there is a concentration of investments in the shares of North American companies.                                                                                                                                |
| Performance risk          | Risks to return                                                                                                                     | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Capital risk              | Risks to capital                                                                                                                    | moderate | There is no capital protection.                                                                                                                                                                                   |
| Flexibility risk          | Inflexibility both within the product and constraints on switching to other providers                                               | none     |                                                                                                                                                                                                                   |
| Inflation risk            | Risk of inflation                                                                                                                   | low      |                                                                                                                                                                                                                   |
| Environmental factors     | Uncertainty regarding the immutability of environmental factors, such as the tax regime                                             | low      |                                                                                                                                                                                                                   |

### Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund USA & Canada Responsible Investing

## 1. Basic details

---

### Name

USA & Canada Responsible Investing

### Date of incorporation

2 November 2018

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The assets are mainly invested in shares of companies from North America.

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund USA & Canada Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 (“Exclusions for Paris Agreement-aligned EU benchmarks”) are respected by this sub-fund.

The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund USA & Canada Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI North America-Net Return index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund USA & Canada Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

#### (2) Greenhouse Gas Intensity

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI North America-Net Return index and a reduction of 50% by 2030 compared to the benchmark MSCI North America-Net Return index in 2019.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund USA & Canada Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

### **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund USA & Canada Responsible Investing' to the prospectus.

### **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

### **Taxonomy related information**

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework " based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund USA & Canada Responsible Investing' to the prospectus.

### **Transparency of adverse sustainability impacts**

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund USA & Canada Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

### **Benchmark information**

The fund is actively managed with reference to the following benchmark: MSCI North America-Net Return index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is 3.50%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

#### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of the MSCI data is permitted without MSCI's express written consent.

### **Volatility of the net asset value**

The volatility of the net asset value may be high due to the composition of the portfolio.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |          | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low      |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low      |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low      |                                                                                                                                                                                                                   |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | high     | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low      |                                                                                                                                                                                                                   |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | moderate | there is a concentration of investments in the shares of North American companies.                                                                                                                                |
| Performance risk          | Risks to return                                                                                                                     | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Capital risk              | Risks to capital                                                                                                                    | moderate | There is no capital protection.                                                                                                                                                                                   |
| Flexibility risk          | Inflexibility both within the product and constraints on switching to other providers                                               | low      |                                                                                                                                                                                                                   |
| Inflation risk            | Risk of inflation                                                                                                                   | low      |                                                                                                                                                                                                                   |
| Environmental factors     | Uncertainty regarding the immutability of environmental factors, such as the tax regime                                             | low      |                                                                                                                                                                                                                   |

### Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

If the profitability of the sub-fund is jeopardised due to a limited number of subscriptions during the initial subscription period (less than 5 000 000 euros), the Board of Directors of the Bevek may decide to refuse the orders placed during the initial subscription period and not to proceed with the commercialisation of the sub-fund.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund We Care Responsible Investing

## 1. Basic details

---

### Name

We Care Responsible Investing

### Date of incorporation

30 January 1998

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The subfund invests primarily in shares of companies that are contributing to the medical well-being of society through their products and services, such as:

- Production and development of medicine
- Biotech
- Medical technology
- Diagnostics, symptom recognition and tests
- Digital health care
- Care for elderly and sick people
- Outsourcing of medical activities
- Distribution of medical supplies
- Health and life insurance
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of social objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund We Care Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 (“Exclusions for

Paris Agreement-aligned EU benchmarks") are respected by this sub-fund.

The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

#### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund We Care Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI All Countries World - Net Return Index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Care Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

## **(2) Greenhouse Gas Intensity**

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the MSCI All Countries World – Net Return Index and a reduction of 50% from 75% of the benchmark value by 2030 compared to the MSCI All Countries World – Net Return Index in 2019.

In order to reflect the specific theme related characteristics of this sub-fund, a unique starting point will apply for the calculation of the greenhouse gas intensity reduction path, which can be higher or lower than the benchmark (MSCI All Countries World - Net Return Index ).

The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be reviewed against that trajectory.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Care Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

## **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund We Care Responsible Investing' to the prospectus.

## **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

## Taxonomy related information

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund We Care Responsible Investing' to the prospectus.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund We Care Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI All Countries World - Net Return Index.

However, is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is above 4.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of

the MSCI data is permitted without MSCI's express written consent.

### ***Volatility of the net asset value***

The volatility of the net asset value may be high due to the composition of the portfolio.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                    | Explanation:                                                                                                                                                                                                                  |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                |                                                                                                                                                                                                                               |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                |                                                                                                                                                                                                                               |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low                                                |                                                                                                                                                                                                                               |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : high          | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Institutional B Shares : high  | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Classic Shares K&H HUF : high  | since there are investments in securities that are denominated in currencies other than the Hungarian Forint, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Classic Shares CSOB CZK : high | since there are investments in securities that are denominated in currencies other than the Czech Koruna, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.     |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low                                                |                                                                                                                                                                                                                               |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | moderate                                           | there is a concentration of the investments in the shares of companies in the pharmaceutical and health care industries.                                                                                                      |

|                       |                                                                                         |          |                                                                    |
|-----------------------|-----------------------------------------------------------------------------------------|----------|--------------------------------------------------------------------|
| Performance risk      | Risks to return                                                                         | high     | the level of the risk reflects the volatility of the stock market. |
| Capital risk          | Risks to capital                                                                        | moderate | There is no capital protection.                                    |
| Flexibility risk      | Inflexibility both within the product and constraints on switching to other providers   | none     |                                                                    |
| Inflation risk        | Risk of inflation                                                                       | low      |                                                                    |
| Environmental factors | Uncertainty regarding the immutability of environmental factors, such as the tax regime | low      |                                                                    |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                     | Date of payment or repayment of the orders |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund We Digitize Responsible Investing

## 1. Basic details

---

### Name

We Digitize Responsible Investing

### Date of incorporation

28 May 1997

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk.** In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The sub-fund aims to generate a return by investing primarily in shares of companies whose products and services support the digital evolution, such as:

- Electronics
- Big data and artificial intelligence
- Quantum computing
- Cloud services and cloud computing
- Cybersecurity
- Semiconductors
- Data services to companies
- Software for professional purposes
- IT consultancy
- Network infrastructure
- Digital marketplaces
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund We Digitize Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU)

2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 ("Exclusions for Paris Agreement-aligned EU benchmarks") are respected by this sub-fund.

The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

#### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund We Digitize Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI All Countries World - Net Return Index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Digitize Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

## **(2) Greenhouse Gas Intensity**

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the MSCI All Countries World – Net Return Index and a reduction of 50% from 75% of the benchmark value by 2030 compared to the MSCI All Countries World – Net Return Index in 2019.

In order to reflect the specific theme related characteristics of this sub-fund, a unique starting point will apply for the calculation of the greenhouse gas intensity reduction path, which can be higher or lower than the benchmark (MSCI All Countries World - Net Return Index ).

The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be reviewed against that trajectory.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Digitize Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

## **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund We Digitize Responsible Investing' to the prospectus.

## **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

## Taxonomy related information

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund We Digitize Responsible Investing' to the prospectus.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund We Digitize Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI All Countries World - Net Return Index.

However, is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is above 4.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of

the MSCI data is permitted without MSCI's express written consent.

***Volatility of the net asset value***

The volatility of the net asset value may be high due to the composition of the portfolio.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                    | Explanation:                                                                                                                                                                                                                  |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                |                                                                                                                                                                                                                               |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                |                                                                                                                                                                                                                               |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low                                                |                                                                                                                                                                                                                               |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : low           |                                                                                                                                                                                                                               |
|                           |                                                                                                                                     | For the share class Institutional B Shares : low   |                                                                                                                                                                                                                               |
|                           |                                                                                                                                     | For the share class Classic Shares K&H HUF : high  | since there are investments in securities that are denominated in currencies other than the Hungarian Forint, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Classic Shares EUR : high      | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Classic Shares CSOB CZK : high | since there are investments in securities that are denominated in currencies other than the Czech Koruna, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.     |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low                                                |                                                                                                                                                                                                                               |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low                                                |                                                                                                                                                                                                                               |
| Performance risk          | Risks to return                                                                                                                     | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |

|                       |                                                                                         |          |                                 |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund We Like Responsible Investing

## 1. Basic details

---

### Name

We Like Responsible Investing

### Date of incorporation

26 August 1999

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The subfund invests primarily in shares of companies that cater for products and services that consumers perceive as adding value beyond their basic needs, such as:

- Sport
- Travel and culture
- Restaurants, takeaway meals and fast food
- Cosmetics and beauty products
- Media and gaming
- Luxury goods
- Pets and care
- Personal mobility
- E-commerce
- Wealth management
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund We Like Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 ("Exclusions for Paris Agreement-aligned EU benchmarks") are respected by this sub-fund. The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

#### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund We Like Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI All Countries World - Net Return Index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Like Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

## **(2) Greenhouse Gas Intensity**

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the MSCI All Countries World – Net Return Index and a reduction of 50% from 75% of the benchmark value by 2030 compared to the MSCI All Countries World – Net Return Index in 2019.

In order to reflect the specific theme related characteristics of this sub-fund, a unique starting point will apply for the calculation of the greenhouse gas intensity reduction path, which can be higher or lower than the benchmark (MSCI All Countries World - Net Return Index ).

The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be reviewed against that trajectory.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Like Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

## **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund We Like Responsible Investing' to the prospectus.

## **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

## Taxonomy related information

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund We Like Responsible Investing' to the prospectus.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund We Like Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI All Countries World - Net Return Index.

However, is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is above 4.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of

the MSCI data is permitted without MSCI's express written consent.

### ***Volatility of the net asset value***

Net asset value volatility can be high due to portfolio composition.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                    | Explanation:                                                                                                                                                                                                                  |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                |                                                                                                                                                                                                                               |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                |                                                                                                                                                                                                                               |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low                                                |                                                                                                                                                                                                                               |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : high          | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Institutional B Shares : high  | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Classic Shares CSOB CZK : high | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Classic Shares K&H HUF : high  | since there are investments in securities that are denominated in currencies other than the Hungarian Forint, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low                                                |                                                                                                                                                                                                                               |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low                                                |                                                                                                                                                                                                                               |
| Performance risk          | Risks to return                                                                                                                     | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |

|                       |                                                                                         |          |                                 |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                     | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup> at 2 pm CET)<br>also referred to as 'Dealing Day'                                         | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup> at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup> at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund We Live Responsible Investing

## 1. Basic details

---

### Name

We Live Responsible Investing

### Date of incorporation

1 February 1999

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk.** In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The subfund invests primarily in shares of companies that cater for products and services that consumers need in everyday life, such as:

- Utilities for water, Internet and electricity, for example
- Computer equipment, software and communication devices for everyday use
- Food and beverages
- Household goods
- Products for hygiene and daily care
- Household appliances
- DIY items
- Textiles and clothing
- E-commerce
- Everyday banking
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund We Live Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 ("Exclusions for Paris Agreement-aligned EU benchmarks") are respected by this sub-fund. The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

#### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund We Live Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI All Countries World - Net Return Index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Live Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

## **(2) Greenhouse Gas Intensity**

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the MSCI All Countries World – Net Return Index and a reduction of 50% by 2030 compared to the MSCI All Countries World – Net Return Index in 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be reviewed against that trajectory.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Live Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

## **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund We Live Responsible Investing' to the prospectus.

## **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

## Taxonomy related information

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund We Live Responsible Investing' to the prospectus.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund We Live Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI All Countries World - Net Return Index.

However, is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is above 4.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of

the MSCI data is permitted without MSCI's express written consent.

***Volatility of the net asset value***

Net asset value can be high due to portfolio composition.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                    | Explanation:                                                                                                                                                                                                                  |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                |                                                                                                                                                                                                                               |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                |                                                                                                                                                                                                                               |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low                                                |                                                                                                                                                                                                                               |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : high          | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Institutional B Shares : high  | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Classic Shares CSOB CZK : high | since there are investments in securities that are denominated in currencies other than the Czech Koruna, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.     |
|                           |                                                                                                                                     | For the share class Classic Shares K&H HUF : high  | since there are investments in securities that are denominated in currencies other than the Hungarian Forint, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low                                                |                                                                                                                                                                                                                               |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low                                                |                                                                                                                                                                                                                               |
| Performance risk          | Risks to return                                                                                                                     | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |

|                       |                                                                                         |          |                                 |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                     | Date of payment or repayment of the orders |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund We Shape Responsible Investing

## 1. Basic details

---

### Name

We Shape Responsible Investing

### Date of incorporation

26 February 1998

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The subfund invests primarily in shares of companies that are shaping the society of the future through their products and services, such as:

- Automation and robotisation
- Solutions for energy transition and storage
- Infrastructure and installations for transport and freight vehicles
- Facilities needed in a circular economy
- Water purification, soil decontamination and air quality improvement
- Machines and installations for more efficient agriculture and forestry
- Industrial plants and machines
- Building materials and construction activities
- Materials
- Logistical solutions
- Credit facilities and financial services to companies and governments
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund We Shape Responsible Investing’ to the prospectus.

This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852. In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 ("Exclusions for Paris Agreement-aligned EU benchmarks") are respected by this sub-fund. The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund We Shape Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Shape Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

## **(2) Greenhouse Gas Intensity**

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index and a reduction of 50% by 2030 from the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be reviewed against that trajectory.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund We Shape Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

## **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund We Shape Responsible Investing' to the prospectus.

## **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

## Taxonomy related information

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund We Shape Responsible Investing' to the prospectus.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund We Shape Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: 20% MSCI All Countries World Materials - Net Return Index, 55% MSCI All Countries World Industrials - Net Return Index, 25% MSCI All Countries World Financials - Net Return Index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is above 4.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

### Required disclaimers for benchmark providers:

The blended returns are calculated by KBC Asset Management NV using end of day index level values licensed from MSCI ("MSCI Data"). For the avoidance of doubt, MSCI is not the benchmark "administrator" for, or a "contributor", "submitter" or "supervised contributor" to, the blended returns, and the MSCI Data is not considered a "contribution" or "submission" in relation to the blended returns, as those terms may be defined in any rules, laws, regulations, legislation or international standards. MSCI Data is provided "AS IS" without warranty or liability and no copying or distribution is permitted. MSCI does not make any representation regarding the advisability of any

investment or strategy and does not sponsor, promote, issue, sell or otherwise recommend or endorse any investment or strategy, including any financial products or strategies based on, tracking or otherwise utilizing any MSCI Data, models, analytics or other materials or information.

### ***Volatility of the net asset value***

**The volatility of the net asset value may be high due to the composition of the portfolio.**

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                    | Explanation:                                                                                                                                                                                                                  |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                |                                                                                                                                                                                                                               |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                |                                                                                                                                                                                                                               |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low                                                |                                                                                                                                                                                                                               |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : high          | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Institutional B Shares : high  | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.             |
|                           |                                                                                                                                     | For the share class Classic Shares CSOB CZK : high | since there are investments in securities that are denominated in currencies other than the Czech Koruna, there is a considerable chance that the value of an investment will be affected by movements in exchange rates.     |
|                           |                                                                                                                                     | For the share class Classic Shares K&H HUF : high  | since there are investments in securities that are denominated in currencies other than the Hungarian Forint, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low                                                |                                                                                                                                                                                                                               |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low                                                |                                                                                                                                                                                                                               |
| Performance risk          | Risks to return                                                                                                                     | high                                               | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |

|                       |                                                                                         |          |                                 |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund World

## 1. Basic details

---

### Name

World

### Date of incorporation

21 March 1991

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The sub-fund invests directly or indirectly in shares and/or share-related investment that may come from any region, sector or theme.

The investments underlying this sub-fund do not take into account the EU criteria for environmentally sustainable economic activities.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors ('PAI') as described by the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ('SFDR')

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy. More information on the principal adverse impact indicators that are taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

KBC Asset Management NV exercises the voting rights of the shares it manages in accordance with the Proxy Voting and Engagement Policy. Where appropriate, KBC Asset Management NV will engage in dialogue with the management of the companies concerned, if necessary before voting.

Information on the principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI All Countries World - Net Return Index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will to a large extent be similar to that of the benchmark.

The benchmark is also used to assess the performance of the sub-fund.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the

fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is 2.50%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

**Volatility of the net asset value**

**The volatility of the net asset value may be high due to the composition of the portfolio.**

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |          | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low      |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low      |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low      |                                                                                                                                                                                                                   |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | high     | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low      |                                                                                                                                                                                                                   |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low      |                                                                                                                                                                                                                   |
| Performance risk          | Risks to return                                                                                                                     | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Capital risk              | Risks to capital                                                                                                                    | moderate | There is no capital protection.                                                                                                                                                                                   |
| Flexibility risk          | Inflexibility both within the product and constraints on switching to other providers                                               | none     |                                                                                                                                                                                                                   |
| Inflation risk            | Risk of inflation                                                                                                                   | low      |                                                                                                                                                                                                                   |
| Environmental factors     | Uncertainty regarding the immutability of environmental factors, such as the tax regime                                             | low      |                                                                                                                                                                                                                   |

### Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

If the profitability of the sub-fund is jeopardised due to a limited number of subscriptions during the initial subscription period (less than 5 000 000 euros), the Board of Directors of the Bevek may decide to refuse the orders placed during the initial subscription period and not to proceed with the commercialisation of the sub-fund.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# Information concerning the sub-fund World DBI-RDT

## 1. Basic details

---

### Name

World DBI-RDT

### Date of incorporation

3 June 2019

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main object of this sub-fund is to generate the highest possible return for its shareholders by investing directly in transferable securities. This is reflected in its pursuit of capital gains and income. To that end, the assets are invested primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, deposits, liquid assets and all other instruments in so far as permitted by the applicable laws and regulations and consistent with the object referred to above.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

#### *Selected strategy*

At least 95% of the assets are invested in a worldwide selection of shares.

The fund invests a minimum of 50% in shares whose dividends and capital gains are eligible for the system of 'dividend received deduction' (DRD).

Under normal circumstances, however, the sub-fund will aim to invest between 70% and 100% in shares whose dividends and capital gains qualify for the DRD regime.

This means that it is possible that the equity portfolio will not be fully invested in equities whose capital gains and dividends qualify for the DRD regime.

As a result, income distributed by the sub-fund may not be 100% eligible for the dividend received deducted.

The investments underlying this sub-fund do not take into account the EU criteria for environmentally sustainable economic activities.

#### *Transparency of adverse sustainability impacts*

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors ('PAI') as described by the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ('SFDR')

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy. More information on the principal adverse impact indicators that are taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

KBC Asset Management NV exercises the voting rights of the shares it manages in accordance with the Proxy Voting and Engagement Policy. Where appropriate, KBC Asset Management NV will engage in dialogue with the management of the companies concerned, if necessary before voting.

Information on the principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

### **Benchmark information**

The fund is actively managed with reference to the following benchmark: MSCI World-Net Return index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The benchmark is also used to assess the performance of the sub-fund.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is 3.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

#### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of the MSCI data is permitted without MSCI's express written consent.

### **Volatility of the net asset value**

**The volatility of the net asset value may be high due to the composition of the portfolio.**

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |          | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low      |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low      |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low      |                                                                                                                                                                                                                   |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | high     | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low      |                                                                                                                                                                                                                   |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low      |                                                                                                                                                                                                                   |
| Performance risk          | Risks to return                                                                                                                     | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Capital risk              | Risks to capital                                                                                                                    | moderate | There is no capital protection.                                                                                                                                                                                   |
| Flexibility risk          | Inflexibility both within the product and constraints on switching to other providers                                               | low      |                                                                                                                                                                                                                   |
| Inflation risk            | Risk of inflation                                                                                                                   | low      |                                                                                                                                                                                                                   |
| Environmental factors     | Uncertainty regarding the immutability of environmental factors, such as the tax regime                                             | low      |                                                                                                                                                                                                                   |

### Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                     | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup> at 2 pm CET)<br>also referred to as 'Dealing Day'                                         | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup> at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup> at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Only distribution shares are issued.

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to its shareholders.

Shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to switch to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

### *Taxation of dividends paid to shareholders liable for Belgian corporation tax*

The sub-fund aims, within the scope of the applicable legislation to enable its shareholders to qualify for the dividend received deduction (DRD) system, as regulated by Articles 202–205 of the Income Tax Code 1992 (ITC 92), in respect of the dividends they receive from the sub-fund.

The sub-fund's articles of association provide to this end for an annual payout of at least 90% of the income it receives itself, this however after deduction of remuneration, commissions and charges.

The dividends paid by the sub-fund (including the 'redemption bonuses' paid to investors under Articles 18 and 186 ITC 92 in respect of purchase by the sub-fund of its own shares) qualify for the dividend received deduction in respect of the shareholder in so far as the underlying income of the sub-fund itself is derived from so-called 'good' income. 'Good' income refers either to dividends that meet the deduction criteria set out in Article 203(1.1–1.4) ITC 92 or to capital gains realised on shares qualifying for exemption under Article 192(1) ITC 92. In so far as the dividends received qualify for the DRD, they will be deducted from the taxable profit.

The DRD system applies to the following shareholders/investors: (1) domestic companies subject to corporation tax and (2) foreign companies with a permanent establishment in Belgium, which are subject to non-residents' corporation tax and in so far as the received dividends may be allocated to the Belgian permanent establishment.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# World DBI-RDT - Discretionary Shares

This share class is reserved for trading to persons who acquire and hold the units on the basis of a discretionary management contract with KBC Asset Management NV or with another company associated with KBC Asset Management NV. The investor must have this status at the moment of subscription and for as long as the investor remains a shareholder of the share class. If it appears that the shares of this class of shares are held by persons other than authorized, these shares will be converted at no cost (except taxes) into shares of the share class 'Classic Shares'.

# World DBI-RDT - Institutional Discretionary Shares

**This share class is reserved**

- for trading to persons who acquire and hold the units on the basis of a discretionary management agreement with KBC Asset Management NV (except a discretionary management agreement 'Core Satellite'), or with another company associated with KBC Asset Management NV and who pay a discretionary management fee on the part of their portfolio invested in KBC UCIs<sup>1</sup>. In addition, these persons must have the status of 'eligible investors', acting on its own behalf, as within the meaning of Article 5 § 3/1 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables<sup>2</sup>. The investor must comply with these conditions at the time of subscription and for as long as the investor remains a shareholder of the share class.
- for trading to institutional undertakings for collective investment managed by KBC Asset Management NV or by another company associated with this management company and who pay a fee on the part of the assets invested in KBC UCIs.

If it appears that the shares of this class are held by persons other than those authorized, these shares will be converted at no cost (except taxes) into shares of the share class "Classic Shares".

<sup>1</sup> These are collective investment undertakings managed by KBC Asset Management NV or by another company associated with this management company.  
<sup>2</sup> These include both professional investors as referred to in Annex A of the Royal Decree of June 3, 2007 laying down detailed rules transposing the Directive on markets in financial instruments and legal persons who are not considered professional investors and who have asked to be registered in the register of eligible investors with the FSMA. Natural persons, as well as legal entities that are not part of eligible investors as defined above, do not have access to this share class.

**One-off fees and charges charged to the investor unless indicated otherwise, in the currency the sub-fund is denominated in or as a percentage of the net asset value per share**

# World DBI-RDT - Institutional Shares

This share class is reserved for institutional investors, as defined in Article 5 § 3 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, and requires a minimum subscription of 10000 EUR (both during as well as after the initial subscription period). The investor must have the status of institutional investor at the moment of subscription and for as long as the investor remains a shareholder of the share class. If it appears that the shares of this class of shares are held by persons other than authorized, these shares will be converted at no cost (except taxes) into shares of the share class 'Classic Shares'.

# Information concerning the sub-fund World DBI-RDT Responsible Investing

## 1. Basic details

---

### Name

World DBI-RDT Responsible Investing

### Date of incorporation

5 June 2020

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, deposits, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.  
The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

#### *Selected strategy*

At least 95% of the assets are invested in a worldwide selection of shares.

The fund invests a minimum of 50% in shares whose dividends and capital gains are eligible for the system of 'dividend received deduction' (DRD).

Under normal circumstances, however, the sub-fund will aim to invest between 70% and 100% in shares whose dividends and capital gains qualify for the DRD regime.

This means that it is possible that the equity portfolio will not be fully invested in equities whose capital gains and dividends qualify for the DRD regime.

As a result, income distributed by the sub-fund may not be 100% eligible for the dividend received deducted.

#### *Information related to Responsible Investing*

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are

assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund World DBI-RDT Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 (“Exclusions for Paris Agreement-aligned EU benchmarks”) are respected by this sub-fund.

The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

#### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.
- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund’s investment universe.

More information regarding the specific exclusions can also be found in the “Annex for KBC Equity Fund World DBI-RDT Responsible Investing” to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for ‘Environmental, Social and Governance’, and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through ‘sustainable investments’ in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the ‘sustainable development’ label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### **(1) ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);

- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI World - Net Return index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund World DBI-RDT Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

## **(2) Greenhouse Gas Intensity**

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO2 equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI World - Net Return index and a reduction of 50% by 2030 compared to the benchmark MSCI World - Net Return index in 2019.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund World DBI-RDT Responsible Investing' to the prospectus.

The targets may be revised upwards or downwards.

## **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund World DBI-RDT Responsible Investing' to the prospectus.

## **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

## Taxonomy related information

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund World DBI-RDT Responsible Investing' to the prospectus.

## Transparency of adverse sustainability impacts

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund World DBI-RDT Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

## Benchmark information

The fund is actively managed with reference to the following benchmark: MSCI World-Net Return index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is 3.00%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

### Required disclaimers for benchmark providers:

Source: MSCI. No MSCI Party nor any other party involved in or related to compiling, computing or creating the MSCI data, makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates, or any third party involved in compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of the MSCI data is permitted without MSCI's express written consent.

### *Volatility of the net asset value*

The volatility of the net asset value may be high due to the composition of the portfolio.

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |          | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low      |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low      |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low      |                                                                                                                                                                                                                   |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | high     | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk              | The risk of loss of assets held in custody with a custodian or sub-custodian                                                        | low      |                                                                                                                                                                                                                   |
| Concentration risk        | The risk relating to a large concentration of investments in specific assets or in specific markets                                 | low      |                                                                                                                                                                                                                   |
| Performance risk          | Risks to return                                                                                                                     | high     | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Capital risk              | Risks to capital                                                                                                                    | moderate | There is no capital protection.                                                                                                                                                                                   |
| Flexibility risk          | Inflexibility both within the product and constraints on switching to other providers                                               | low      |                                                                                                                                                                                                                   |
| Inflation risk            | Risk of inflation                                                                                                                   | low      |                                                                                                                                                                                                                   |
| Environmental factors     | Uncertainty regarding the immutability of environmental factors, such as the tax regime                                             | low      |                                                                                                                                                                                                                   |

### Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

## 5. Types of shares and fees and charges

---

Only distribution shares are issued.

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to its shareholders.

Shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to switch to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

### *Taxation of dividends paid to shareholders liable for Belgian corporation tax*

The sub-fund aims, within the scope of the applicable legislation to enable its shareholders to qualify for the dividend received deduction (DRD) system, as regulated by Articles 202–205 of the Income Tax Code 1992 (ITC 92), in respect of the dividends they receive from the sub-fund.

The sub-fund's articles of association provide to this end for an annual payout of at least 90% of the income it receives itself, this however after deduction of remuneration, commissions and charges.

The dividends paid by the sub-fund (including the 'redemption bonuses' paid to investors under Articles 18 and 186 ITC 92 in respect of purchase by the sub-fund of its own shares) qualify for the dividend received deduction in respect of the shareholder in so far as the underlying income of the sub-fund itself is derived from so-called 'good' income. 'Good' income refers either to dividends that meet the deduction criteria set out in Article 203(1.1–1.4) ITC 92 or to capital gains realised on shares qualifying for exemption under Article 192(1) ITC 92. In so far as the dividends received qualify for the DRD, they will be deducted from the taxable profit.

The DRD system applies to the following shareholders/investors: (1) domestic companies subject to corporation tax and (2) foreign companies with a permanent establishment in Belgium, which are subject to non-residents' corporation tax and in so far as the received dividends may be allocated to the Belgian permanent establishment.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# World DBI-RDT Responsible Investing - Discretionary Shares

This share class is reserved for trading to persons who acquire and hold the units on the basis of a discretionary management contract with KBC Asset Management NV or with another company associated with KBC Asset Management NV. The investor must have this status at the moment of subscription and for as long as the investor remains a shareholder of the share class. If it appears that the shares of this class of shares are held by persons other than authorized, these shares will be converted at no cost (except taxes) into shares of the share class 'Classic Shares'.

# World DBI-RDT Responsible Investing - Institutional Discretionary Shares

**This share class is reserved**

- for trading to persons who acquire and hold the units on the basis of a discretionary management agreement with KBC Asset Management NV (except a discretionary management agreement 'Core Satellite'), or with another company associated with KBC Asset Management NV and who pay a discretionary management fee on the part of their portfolio invested in KBC UCIs<sup>1</sup>. In addition, these persons must have the status of 'eligible investors', acting on its own behalf, as within the meaning of Article 5 § 3/1 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables<sup>2</sup>. The investor must comply with these conditions at the time of subscription and for as long as the investor remains a shareholder of the share class.
- for trading to institutional undertakings for collective investment managed by KBC Asset Management NV or by another company associated with this management company and who pay a fee on the part of the assets invested in KBC UCIs.

If it appears that the shares of this class are held by persons other than those authorized, these shares will be converted at no cost (except taxes) into shares of the share class "Classic Shares".

<sup>1</sup> These are collective investment undertakings managed by KBC Asset Management NV or by another company associated with this management company.

<sup>2</sup> These include both professional investors as referred to in Annex A of the Royal Decree of June 3, 2007 laying down detailed rules transposing the Directive on markets in financial instruments and legal persons who are not considered professional investors and who have asked to be registered in the register of eligible investors with the FSMA. Natural persons, as well as legal entities that are not part of eligible investors as defined above, do not have access to this share class.

**One-off fees and charges charged to the investor unless indicated otherwise, in the currency the sub-fund is denominated in or as a percentage of the net asset value per share**

# World DBI-RDT Responsible Investing - Institutional Shares

This share class is reserved for institutional investors, as defined in Article 5 § 3 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, and requires a minimum subscription of 10000 EUR (both during as well as after the initial subscription period). The investor must have the status of institutional investor at the moment of subscription and for as long as the investor remains a shareholder of the share class. If it appears that the shares of this class of shares are held by persons other than authorized, these shares will be converted at no cost (except taxes) into shares of the share class 'Classic Shares'.

# Information concerning the sub-fund World Responsible Investing

## 1. Basic details

---

### Name

World Responsible Investing

### Date of incorporation

2 November 2018

### Life

Unlimited

### Delegation of the management of the investment portfolio

There is no delegation of the management of the investment portfolio.

### Stock exchange listing

Not applicable.

## 2. Investment information

---

### Sub-fund's object

The main objective of this sub-fund is to generate the highest possible return for its shareholders by investing directly or indirectly in transferable securities. This is reflected in its pursuit of capital gains and income. To this end, the assets are invested, either directly or indirectly via correlated financial instruments, primarily in shares.

### Sub-fund's investment policy

#### *Permitted asset classes*

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described above.

The sub-fund shall invest no more than 10% of its assets in units of other undertakings for collective investment.

#### *Restrictions of the investment policy*

The investment policy will be implemented within the limits set by law and regulations.

The sub-fund may borrow up to 10% of its net assets, insofar as these are short-term borrowings aimed at solving temporary liquidity problems.

## Permitted derivatives transactions

Derivatives can be used both to achieve the investment objectives and to hedge risks.

Listed and unlisted derivatives may be used to achieve the objectives: these may be forward contracts, futures, options or swaps on securities, indexes, currencies or interest rates or other transactions involving derivatives. Unlisted derivatives transactions will only be concluded with prime financial institutions specialised in such transactions.

Subject to the applicable laws and regulations and the articles of association, the sub-fund always seeks to conclude the most effective transactions. All costs associated with the transactions will be charged to the sub-fund and all income generated will be paid to the sub-fund.

If the transactions result in a risk in respect of the counterparty, this risk can be hedged by using a margin management system that ensures that the sub-fund is the beneficiary of security (collateral) in the form of liquid instruments, such as, for instance, cash or investment grade bonds. The relationship with the counterparty or counterparties is governed by standard international agreements.

Derivatives may also be used to hedge the assets of the sub-fund against open exchange rate risks in relation to the currency in which the sub-fund is denominated.

Where derivatives are used, they must be easily transferable and liquid instruments. Using derivatives does not, therefore, have a negative impact on liquidity risk. The use of derivatives may, however, affect the spread of the portfolio across regions, sectors or themes. **Consequently, there may be an impact on concentration risk. Derivatives may not be used to protect capital, either fully or partially. They neither increase nor decrease capital risk. In addition, using derivatives has no negative impact on credit risk, settlement risk, custody risk, flexibility risk or inflation risk or risk dependent on external factors.**

The UCITS may conclude contracts that entail a credit risk in respect of issuers of debt instruments. Credit risk is the risk that the issuer of the debt instrument will default. This credit risk relates to parties whose creditworthiness at the time the contract is concluded is equal to that of the issuers whose debt instruments the UCITS can hold directly. Credit derivatives may possibly be used both to carry out the investment objectives and to cover the credit risk, but solely within the existing risk profile and without implying any shift to less creditworthy debtors than those the UCITS can invest in.

## Selected strategy

The sub-fund invests primarily in a worldwide selection of shares from any region, sector or theme.

## Information related to Responsible Investing

Within the above limits, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

KBC Asset Management NV has a team of specialist researchers responsible for this dualistic approach. They are assisted by an independent advisory board (the “**Responsible Investing Advisory Board**”) comprised of up to twelve persons, who are not affiliated to KBC Asset Management NV, and whose sole responsibility is to supervise the dualistic approach and activities of the specialist researchers. The secretariat of the advisory board is handled by a representative of KBC Asset Management NV. Moreover, KBC Asset Management NV works with data suppliers with expertise in Responsible Investing that provide data to the specialized researchers, who process and complete the data with publicly available information (including annual reports, press publications, etc.).

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. ‘sustainable investments’).

The companies in which it invests must follow good governance practices.

The sub-fund is compliant with the transparency obligations of article 8(1) of Regulation (EU) 2019/2088 of the European Parliament and of the council of 27 November 2019 on sustainability-related disclosures in the financial services sector (‘SFDR’). More information on how the sub-fund promotes environmental and/or social characteristics can be found in the ‘Annex for KBC Equity Fund World Responsible Investing’ to the prospectus. This annex specifically covers the pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852.

In addition, the exclusions set out in Article 12(1)(a) to (g) of Delegated Regulation (EU) 2020/1818 (“Exclusions for Paris Agreement-aligned EU benchmarks”) are respected by this sub-fund.

The sub-fund complies with the European Securities and Markets Authority (ESMA) guidelines on fund names using ESG or sustainability-related terms.

### Negative screening

In practical terms the end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policy available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific

activities, such as conventional weapons, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, agricultural commodities or the mining of thermal coal, among others.

- The sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as specified in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons, but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

This screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance, among others, are excluded from the sub-fund's investment universe.

More information regarding the specific exclusions can also be found in the "Annex for KBC Equity Fund World Responsible Investing" to the prospectus.

These negative screening principles are not exhaustive and may be adapted from time to time under the supervision of the Responsible Investing Advisory Board.

#### Positive selection methodology

Within the defined investment universe and other limits described above, the responsible investment objectives of the sub-fund are the following:

- (1) promote the integration of sustainability into the policy decisions of companies by preferring companies with a better **ESG risk score**, where ESG stands for 'Environmental, Social and Governance', and
- (2) promote climate change mitigation, by preferring companies with lower **Greenhouse Gas Intensity**, with the objective of meeting a predetermined Greenhouse Gas intensity target;
- (3) support sustainable development, through 'sustainable investments' in accordance with art. 2(17) SFDR. Sustainable investments will consist of investments in companies contributing to the achievement of the **UN Sustainable Development Goals** (plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board).

More information on the investment policy for Responsible Investing funds is available at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

#### (1) ESG-risk score

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG-risk score. This score represents the aggregated performance assessment of a given company against a series of ESG criteria which are grounded to the extent possible against objective measures. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g., reduction in greenhouse gas emissions);
- attention to society (e.g., employee working conditions); and
- corporate governance (e.g., independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score. The ESG risk score for companies is an ESG risk score supplied by a data provider, and based on internal research as well.

These lists are not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To achieve this objective, the ESG-risk score of the portfolio for companies is compared to following benchmark: MSCI All Countries World - Net Return Index.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG (risk) scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies or countries for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

More information on the ESG-risk score and the concrete goals of the sub-fund can be found in the 'Annex for KBC Equity Fund World Responsible Investing' to the prospectus.

The targets can be revised upwards or downwards.

#### (2) Greenhouse Gas Intensity

The objective to promote climate change mitigation, by favoring lower greenhouse gas intensity companies, with the goal of meeting a predetermined greenhouse gas intensity target covers at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent), divided by revenues (in mln USD).

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index and a reduction of 50% by 2030 compared to the benchmark MSCI All Countries World - Net Return Index in 2019.

More information on Greenhouse Gas Intensity and the concrete goals of the sub-fund can be found in the 'Annex

for KBC Equity Fund World Responsible Investing' to the prospectus.  
The targets may be revised upwards or downwards.

### **(3) UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

Instruments of companies that meet these requirements are designated as "sustainable investments," according to Article 2(17) SFDR.

In addition, KBC Asset Management NV can award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments," according to Article 2(17) SFDR.

More information about the methodology used to qualify investments as investments which contribute to the UN Sustainable Development Goals can be found in the 'Annex for KBC Equity Fund World Responsible Investing' to the prospectus.

### **Potential Exceptions**

It cannot be ruled out, however, that very limited investments may be made temporarily in assets that do not meet the above criteria. The reasons for this include the following:

- Developments as a result of which a company can no longer be regarded as eligible after purchase;
- Corporate events, such as a merger of one company with another, where the merged company can no longer be considered an eligible company based on the above criteria;
- Incorrect data as a result of which assets are invested (unintentionally and erroneously) in assets purchased when it should not have been eligible for the sub-fund;
- A planned update of the screening criteria as a result of which assets should be excluded from the sub-fund, but which the management company chooses to refrain from selling immediately in the best interest of the customer;
- External circumstances such as market movements and updates of external data can lead to investment solutions failing to achieve the abovementioned targets.

In these cases, the fund manager will replace the assets concerned with more appropriate assets as soon as possible, always taking into account the sole interest of the investor.

In addition, for the purpose of efficient portfolio management, the fund manager may to a significant degree use derivatives relating to assets that would not be eligible for inclusion in the sub-fund, in so far as there is no serviceable and comparable alternative available on the market. In addition, the counterparties with which the derivative transactions are entered into may not necessarily be issuers having a responsible nature.

### **Taxonomy related information**

At the date of this prospectus, the sub-fund does not commit to invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy Framework'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework is 0%. This will be monitored on a regular basis and as soon as sufficiently reliable, timely and verifiable data from issuers or invested companies is available, the prospectus may be updated.

Non-financial companies are considered to contribute to sustainable development if at least 20% of sales are aligned to the EU Taxonomy Framework based on Trucost data. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework " based on this criterion during the reporting period, can be found in the annual reports for this sub-fund.

More information on the EU Taxonomy Framework can be found in the 'Annex for KBC Equity Fund World Responsible Investing' to the prospectus.

### **Transparency of adverse sustainability impacts**

The sub-fund considers the principal adverse impacts of its investment decisions on sustainability factors by taking into account the principal adverse impact indicators ('PAI'), as described in the Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosure in the financial services sector ('SFDR').

The principal adverse impacts on sustainability factors are explicitly taken into account through the General exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds. More information on the principal adverse impact indicators taken into account can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > General exclusion policy for conventional and Responsible Investing funds and [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV (more information can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Retrospective Proxy Voting - overview > Proxy Voting and Engagement Policy).

More information on how the sub-fund aims to consider the principal adverse impacts on sustainability factors can also be found in the 'Annex for KBC Equity Fund World Responsible Investing' to the prospectus. A statement on how the sub-fund has considered the principal adverse impacts on sustainability factors during the reporting period can also be found in the annual reports for this sub-fund.

### **Benchmark information**

The fund is actively managed with reference to the following benchmark: MSCI All Countries World - Net Return Index.

However, it is not the aim of the fund to replicate the benchmark. The composition of the benchmark is taken into account when compiling the portfolio.

In line with its investment policy, the sub-fund may not invest in all the instruments included in the benchmark.

When compiling the portfolio, the manager may also decide to invest in instruments that are not included in the benchmark, or indeed not to invest in instruments that are included.

The composition of the portfolio will vary from that of the benchmark, as the composition of the benchmark is not fully consistent with the environmental and/or social characteristics promoted by the sub-fund. The use of the benchmark does not detract from the responsible character of the portfolio. The responsible character is guaranteed by the aforementioned Responsible Investing methodology.

The benchmark is also used to determine the fund's risk limitation mechanism. This limits the extent to which the fund's return may deviate from the benchmark.

The longterm expected tracking error for this fund is 3.50%. The tracking error measures the volatility of the fund's return relative to that of the benchmark. The higher the tracking error, the more the fund's return fluctuates relative to the benchmark. Market conditions may cause the actual tracking error to differ from the expected tracking error.

#### Required disclaimers for benchmark providers:

No further distribution or dissemination of the MSCI data is permitted without MSCI's express written consent.

### **Volatility of the net asset value**

**The volatility of the net asset value may be high due to the composition of the portfolio.**

## 3. Risk

### Sub-fund's risk profile

Investors must take note of the specific risk factors set out below, the description of the risks given under the heading 'Information concerning the Bevek - F.Information on the risk profile of the UCITS', and the 'What are the risks and what could I get in return?' section of the key information document.

Summary table of risks assessed by the sub-fund:

| Risk type                 | Concise definition of the risk                                                                                                      |                                                               | Explanation:                                                                                                                                                                                                      |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Market risk               | The risk that the entire market of an asset class will decline, thus affecting the prices and values of the assets in the portfolio | high                                                          | the level of the risk reflects the volatility of the stock market.                                                                                                                                                |
| Credit risk               | The risk that an issuer or a counterparty will default                                                                              | low                                                           |                                                                                                                                                                                                                   |
| Settlement risk           | The risk that settlement of a transaction via a payment system will not take place as expected                                      | low                                                           |                                                                                                                                                                                                                   |
| Liquidity risk            | The risk that a position cannot be liquidated in a timely manner at a reasonable price                                              | low                                                           |                                                                                                                                                                                                                   |
| Exchange or currency risk | The risk that the value of an investment will be affected by changes in exchange rates                                              | For the share class Classic Shares : high                     | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Institutional B Shares : high             | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Discretionary Shares : high               | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Institutional F Shares LU : high          | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
|                           |                                                                                                                                     | For the share class Institutional Discretionary Shares : high | since there are investments in securities that are denominated in currencies other than the Euro, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |

|                       |                                                                                                     |                                                   |                                                                                                                                                                                                                               |
|-----------------------|-----------------------------------------------------------------------------------------------------|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       |                                                                                                     | For the share class Classic Shares K&H HUF : high | since there are investments in securities that are denominated in currencies other than the Hungarian Forint, there is a considerable chance that the value of an investment will be affected by movements in exchange rates. |
| Custody risk          | The risk of loss of assets held in custody with a custodian or sub-custodian                        | low                                               |                                                                                                                                                                                                                               |
| Concentration risk    | The risk relating to a large concentration of investments in specific assets or in specific markets | low                                               |                                                                                                                                                                                                                               |
| Performance risk      | Risks to return                                                                                     | high                                              | the level of the risk reflects the volatility of the stock market.                                                                                                                                                            |
| Capital risk          | Risks to capital                                                                                    | moderate                                          | There is no capital protection.                                                                                                                                                                                               |
| Flexibility risk      | Inflexibility both within the product and constraints on switching to other providers               | low                                               |                                                                                                                                                                                                                               |

## Risk profile of the typical investor

Profile of the typical investor for which the sub-fund has been designed : Highly dynamic profile.

The risk profile mentioned per sub-fund has been determined from the point of view of an investor in the euro area and may differ from that of an investor in other currency zones. More information on the risk profiles can be obtained at [www.kbc.be/riskprofile](http://www.kbc.be/riskprofile).

## 4. Information concerning the trading of shares

### How to buy and sell shares and switch between sub-funds

If it turns out that shares are being held by persons other than those permitted to hold them, the Company may, in accordance with article 8.2 of the articles of association, and without charge (except any taxes due and any charges to cover the cost of realising the assets), redeem those shares.

| Cut-off time for receiving orders at the financial service providers in Belgium <sup>(1)</sup><br><br>Date of published net asset value | Date the net asset value is calculated | Actual values used                                                                                                                                                                                                                                           | Date of payment or repayment of the orders |
|-----------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>D</b><br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br>also referred to as 'Dealing Day'                                      | <b>D+1 banking day</b>                 | <b>D</b> if maximum 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET)<br><br><b>D+1</b> if more than 20% of the actual values are already known on D<br>(every banking day <sup>(2)</sup><br>at 2 pm CET) | <b>D+3 banking days</b>                    |

<sup>(1)</sup> The cut-off time for receiving orders stated above applies to orders investors place directly with the financial services providers in Belgium.

If an investor places an order with a financial institution other than the financial service providers in Belgium, he/she must find out from that institution what cut-off time (time + date) applies to the order he/she wishes to place so that the institution in question can take the necessary action to ensure that the order reaches the financial service providers in Belgium before 2 pm CET on day D in order to qualify as an order of day D.

<sup>(2)</sup> with the exception of banking days on which one or more markets on which more than 20% of the sub-fund's assets are listed are closed or if transactions are suspended or restricted.

### Calculation of the net asset value

The net asset value is calculated daily, as described above, except on days on which no shares may be issued or redeemed. Swing pricing may be applied as described in the 'Information concerning the Bevek – N. Liquidity management tools' section.

### Publication of the net asset value

The 'Information concerning the Bevek – I. Additional information – Publication of the net asset value' section specifies where the result of the calculation of the net asset value can be viewed.

If the profitability of the sub-fund is jeopardised due to a limited number of subscriptions during the initial subscription period (less than 5 000 000 euros), the Board of Directors of the Bevek may decide to refuse the orders placed during the initial subscription period and not to proceed with the commercialisation of the sub-fund.

## 5. Types of shares and fees and charges

---

Shares may be in registered or book-entry form, as the shareholder chooses. No certificates representing the registered shares are issued. Instead, confirmation is supplied of entry in the register of shareholders.

### Dividend payment

After the close of the financial year, the General Meeting determines the portion of the result, which, within the limitations imposed by the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables, is to be paid to the holders of distribution shares.

The holders of capitalisation shares are not entitled to receive a dividend. The portion of the annual net income accruing to them is capitalised in favour of these shares.

The shareholders will receive payment within six months of the close of the financial year via institutions designated for this purpose by the General Meeting.

The General Meeting may decide to proceed to interim payments in accordance with the provisions of the law.

The Board of Directors may, in accordance with the provisions laid down in the articles of association and within the limits of the law, decide to pay out interim dividends.

The information on the type and/or class of shares and the fees and charges associated with them is set out below by type and/or share class.

# World Responsible Investing - Discretionary Shares

This share class is reserved for trading to persons who acquire and hold the units on the basis of a discretionary management contract with KBC Asset Management NV or with another company associated with KBC Asset Management NV. The investor must have this status at the moment of subscription and for as long as the investor remains a shareholder of the share class. If it appears that the shares of this class of shares are held by persons other than authorized, these shares will be converted at no cost (except taxes) into shares of the share class 'Classic Shares'.

# World Responsible Investing - Institutional Discretionary Shares

**This share class is reserved**

- for trading to persons who acquire and hold the units on the basis of a discretionary management agreement with KBC Asset Management NV (except a discretionary management agreement 'Core Satellite'), or with another company associated with KBC Asset Management NV and who pay a discretionary management fee on the part of their portfolio invested in KBC UCIs<sup>1</sup>. In addition, these persons must have the status of 'eligible investors', acting on its own behalf, as within the meaning of Article 5 § 3/1 of the Law of 3 August 2012 relative to undertakings for collective investment complying with the conditions of Directive 2009/65/EC and the undertakings for investment in receivables<sup>2</sup>. The investor must comply with these conditions at the time of subscription and for as long as the investor remains a shareholder of the share class.
- for trading to institutional undertakings for collective investment managed by KBC Asset Management NV or by another company associated with this management company and who pay a fee on the part of the assets invested in KBC UCIs.

If it appears that the shares of this class are held by persons other than those authorized, these shares will be converted at no cost (except taxes) into shares of the share class "Classic Shares".

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Asia Pacific Responsible Investing

**Legal entity identifier (LEI):**  
875500BHWG9XZQY7EX15

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI Pacific-Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI Pacific-Net Return index as described in the prospectus under the title 'information concerning the sub-fund Asia Pacific Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI Pacific-Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                           |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI Pacific-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI Pacific-Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund Asia Pacific Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI Pacific-Net Return index as described in the prospectus under the title 'Information regarding the sub-fund Asia Pacific Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI Pacific-Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Asia Pacific Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Asia Pacific Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

#### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

##### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

##### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

#### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

#### **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Asia Pacific Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Asia Pacific Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion

during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Asia Pacific Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are mainly invested in shares of companies from Japan and developed countries in the Asia-Pacific region.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

sustainable investments are with

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

#### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Asia Pacific Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

#### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI Pacific-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

#### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Emerging Markets Responsible Investing

**Legal entity identifier (LEI):**  
549300BD4WMIYX55Z705

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 15.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI Emerging Markets-Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI Emerging Markets-Net Return index as described in the prospectus under the title 'information concerning the sub-fund Emerging Markets Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI Emerging Markets-Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 15.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                 |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI Emerging Markets-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI Emerging Markets-Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund Emerging Markets Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI Emerging Markets-Net Return index as described in the prospectus under the title 'Information regarding the sub-fund Emerging Markets Responsible Investing' and a reduction of 50% by 2030

compared to the benchmark MSCI Emerging Markets-Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons,

nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability

principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Emerging Markets Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Emerging Markets Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Emerging Markets Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Emerging Markets Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 15.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 15.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Emerging Markets Responsible Investing".

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

At least 90% of the assets will be invested, directly or indirectly, in shares of emerging market companies.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 15.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 5.00%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Emerging Markets Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI Emerging Markets-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund Emerging Markets Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**

KBC Equity Fund EMU Small & Medium Caps Responsible Investing

**Legal entity identifier (LEI):**

875500XU7QBWLDMB5039

## Environmental and/or social characteristics

**Sustainable investment**

means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: %

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective**: %.

It promotes E/S characteristics, but **will not make any sustainable investments**.

**What environmental and/or social characteristics are promoted by this financial product?**

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI EMU SMALL CAP - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI EMU SMALL CAP - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund EMU Small & Medium Caps Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI EMU SMALL CAP - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund EMU Small & Medium Caps Responsible Investing' and a reduction of

50% by 2030 compared to the benchmark MSCI EMU SMALL CAP - Net Return Index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded

outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----How have the indicators for adverse impacts on sustainability factors been taken into account?

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the

sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### **Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund EMU Small & Medium Caps Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund EMU Small & Medium Caps Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund EMU Small & Medium Caps Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund EMU Small & Medium Caps Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 2.50% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 2.50% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover** reflecting the share of revenue from green activities of investee companies.

**-capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund EMU Small & Medium Caps Responsible Investing".

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are invested primarily in shares of companies in the euro area which have a small to medium market capitalisation.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?**

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

**1. Taxonomy-alignment of investments including sovereign bonds\***

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

**2. Taxonomy-alignment of investments excluding sovereign bonds\***

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 2.50% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 2.50%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund EMU Small & Medium Caps Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI EMU SMALL CAP - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund EMU Small & Medium Caps Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Eurozone Responsible Investing

**Legal entity identifier (LEI):**  
875500R3KEAZUPH7BE40

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: %

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective**: %.

It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI EMU-Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI EMU-Net Return index as described in the prospectus under the title 'information concerning the sub-fund Eurozone Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI EMU-Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                               |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI EMU-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI EMU-Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund Eurozone Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO2 equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI EMU-Net Return index as described in the prospectus under the title 'Information regarding the sub-fund Eurozone Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI EMU-Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Eurozone Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Eurozone Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

#### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

##### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

##### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

#### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

#### **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Eurozone Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Eurozone Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information

can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Eurozone Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are mainly invested in shares of companies in the euro area.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

sustainable investments are with

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

#### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Eurozone Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

#### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI EMU-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

#### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Global Value DBI-RDT Responsible Investing

**Legal entity identifier (LEI):**  
875500CN9CZ2GMC3SU69

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI World - Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI World - Net Return index as described in the prospectus under the title 'information concerning the sub-fund Global Value DBI-RDT Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI World - Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                   |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI World - Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI World - Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund Global Value DBI-RDT Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI World - Net Return index as described in the prospectus under the title 'Information regarding the sub-fund Global Value DBI-RDT Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI World - Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Global Value DBI-RDT Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Global Value DBI-RDT Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

**What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

**Negative screening**

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

**The positive selection methodology**

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

**What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments in  
specific assets.

The sub-fund may invest in securities, deposits, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Global Value DBI-RDT Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?'.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The sub-fund will not invest in derivatives.

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The sub-fund invests primarily in shares of companies that fit within the 'Structural value' theme. Companies within this theme include those offering shares with high dividend yields and/or share buyback policies. Consideration is also given to companies for which a relatively low valuation (expressed, for example, by a high book-to-market ratio) could indicate potential for short- or medium-term capital gain on the investment. The book-to-market ratio is the result of the carrying value (calculated as the value of assets less liabilities) of a company divided by its market value (calculated as the number of shares outstanding multiplied by the price per share). Investments are made in a worldwide selection of shares.

The sub-fund invests at least 50% of its assets in shares of which the dividends and capital gains qualify for the 'dividends received deduction' (DRD) system. However, under normal circumstances, the sub-fund will aim to invest between 70% and 100% in shares of which the dividends and capital gains qualify for the DRD system.

This means that not all of the share portfolio may be invested in shares of which the capital gains and dividends qualify for the DRD system. As a result, it is conceivable that the income distributed to the shareholders by the sub-fund may not qualify in full for the dividends received deduction.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

☒ Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 5.00%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

For the investments under “#2 Other” there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI World - Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

**How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

**How does the designated index differ from a relevant broad market index?**

Not applicable.

**Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC  
Equity Fund Global Value DBI-RDT Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Global Value Responsible Investing

**Legal entity identifier (LEI):**  
875500JSEPD3I6G1V867

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ **Yes** ☒ ☐ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective: %**

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective: %**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI World - Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI World - Net Return index as described in the prospectus under the title 'information concerning the sub-fund Global Value Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI World - Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                           |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI World - Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI World - Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund Global Value Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI World - Net Return index as described in the prospectus under the title 'Information regarding the sub-fund Global Value Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI World - Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Global Value Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Global Value Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

#### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

##### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

##### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

#### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

#### **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Global Value Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Global Value Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion

during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Global Value Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The sub-fund invests primarily in shares of companies that fit within the 'Structural value' theme. Companies within this theme include those offering shares with high dividend yields and/or share buyback policies. Consideration is also given to companies for which a relatively low valuation (expressed, for example, by a high book-to-market ratio) could indicate potential for short- or medium-term capital gain on the investment. The book-to-market ratio is the result of the carrying value (calculated as the value of assets less liabilities) of a company divided by its market value (calculated as the number of

shares outstanding multiplied by the price per share). Investments are made in a worldwide selection of shares.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

☒ Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

☐

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

### What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Global Value Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI World - Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC  
Equity Fund Global Value Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Minimum Variance Responsible Investing

**Legal entity identifier (LEI):**  
5493000DDUOOPAQH2R82

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ESG risk score                                                                                                                                                           | Better than the following reference portfolio: MSCI All Countries World - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the reference portfolio: MSCI All Countries World - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund Minimum Variance Responsible Investing' and a reduction of 50% by 2030 based on the following reference portfolio: MSCI All Countries World - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                                               |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the reference portfolio MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the reference portfolio MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund Minimum Variance Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the reference portfolio MSCI All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund Minimum Variance Responsible Investing' and a reduction of

50% by 2030 compared to the reference portfolio MSCI All Countries World - Net Return Index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded

outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

The whitelist, as stated in the Exclusion policy for Responsible Investing funds under the heading "Conventional weapons", does not apply to this sub-fund. This sub-fund will therefore not invest in companies that exceed the turnover thresholds for conventional weapons and/or nuclear weapons.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----How have the indicators for adverse impacts on sustainability factors been taken into account?

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

----- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Minimum Variance Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Minimum Variance Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?.'

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Minimum Variance Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Minimum Variance Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Minimum Variance Responsible Investing".

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are invested directly or indirectly in a diversified selection of global shares .

The objective is to generate a high return while minimising the fluctuations in the value of the sub-fund. The composition of the portfolio is based on a quantitative model aimed at minimising expected volatility.

The main parameters of the model are historical data on the price movements of individual stocks, their correlation with the broad market and their mutual correlation. As a result, the sub-fund may invest to a greater or lesser extent in one or several themes, sectors or regions.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

#### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐ Yes

☐ in fossil gas

☐ in nuclear energy

☒ No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 5.00%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Minimum Variance Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the reference portfolio MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

☐ **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

☐ **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

☐ **How does the designated index differ from a relevant broad market index?**

Not applicable.

☐ **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund Minimum Variance Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund North America Responsible Investing

**Legal entity identifier (LEI):**  
875500CSDCOYBT8YKZ27

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: %

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective**: %.

It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI North America-Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI North America-Net Return index as described in the prospectus under the title 'information concerning the sub-fund North America Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI North America-Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                        |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI North America-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI North America-Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund North America Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO2 equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI North America-Net Return index as described in the prospectus under the title 'Information regarding the sub-fund North America Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI North America-Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund North America Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund North America Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

**What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

**Negative screening**

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

**The positive selection methodology**

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

**What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund North America Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund North America Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion

during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund North America Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are mainly invested in shares of companies from the United States and Canada. Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

☐

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

sustainable investments are with

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

#### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund North America Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

#### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI North America-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

#### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund North American Continent Responsible Investing

**Legal entity identifier (LEI):**  
875500S353CF3CLO9W82

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ Yes ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI North America-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI North America-Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund North American Continent Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI North America-Net Return index as described in the prospectus under the title 'Information regarding the sub-fund North American Continent Responsible Investing' and a reduction of 50%

by 2030 compared to the benchmark MSCI North America-Net Return index at the end of 2019. An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals. In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals. In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening. The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening. The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies. The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons,

nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability

principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### **Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund North American Continent Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund North American Continent Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund North American Continent Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund North American Continent Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund North American Continent Responsible Investing".

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are mainly invested in shares of companies from continental North America . Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?**

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

**1. Taxonomy-alignment of investments including sovereign bonds\***

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

**2. Taxonomy-alignment of investments excluding sovereign bonds\***

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 5.00%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund North American Continent Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI North America-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund North American Continent Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Rest of Europe Responsible Investing

**Legal entity identifier (LEI):**  
875500FKXMTWGI6B1324

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI Europe Ex EMU - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI Europe Ex EMU - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund Rest of Europe Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI Europe Ex EMU - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                             |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI Europe Ex EMU - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI Europe Ex EMU - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund Rest of Europe Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI Europe Ex EMU - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund Rest of Europe Responsible Investing' and a reduction of 50% by 2030

compared to the benchmark MSCI Europe Ex EMU - Net Return Index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons,

nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability

principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Rest of Europe Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Rest of Europe Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Rest of Europe Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Rest of Europe Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of

investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure (OpEx)** reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Rest of Europe Responsible Investing".

**To what minimum extent are sustainable investments with an environmental objective**

## aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are mainly invested in shares of companies from Member States of the European Union that are not members of the euro area, as well as The United Kingdom, Switzerland and Norway.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

### ☐ Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 5.00%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Rest of Europe Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI Europe Ex EMU - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

☐ **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

☐ **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

☐ **How does the designated index differ from a relevant broad market index?**

Not applicable.

☐ **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund Rest of Europe Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Strategic Satellites Responsible Investing

**Legal entity identifier (LEI):**  
549300V7M7HZ3URNH528

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| ESG risk score                                                                                                                                                    | Better than the following benchmark: MSCI All Countries World - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Greenhouse gas Intensity                                                                                                                                          | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI All Countries World - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund Strategic Satellites Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI All Countries World - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| Minimum % Sustainable Investments                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                               |
| Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | 2.50%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Minimum % of sustainable investments with a social objective                                                                                                      | 2.50%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Minimum % of assets promoting E/S characteristics                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Other specific objectives                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund Strategic Satellites Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund Strategic Satellites Responsible Investing' and a reduction of 50% by 2030

compared to the benchmark MSCI All Countries World - Net Return Index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons,

nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability

principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Strategic Satellites Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Strategic Satellites Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Strategic Satellites Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Strategic Satellites Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 2.50% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 2.50% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Strategic Satellites Responsible Investing".

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The sub-fund invests (directly or indirectly) in shares and/or share-related investment that may come from any region, sector or theme.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

### Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐ Yes

☐ in fossil gas ☐ in nuclear energy

☒ No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 2.50% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 2.50%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Strategic Satellites Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund Strategic Satellites Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund Trends Responsible Investing

**Legal entity identifier (LEI):**  
549300JV8KE6WHV2HD78

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI All Countries World - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI All Countries World - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund Trends Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI All Countries World - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                 |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund Trends Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO2 equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund Trends Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI All Countries World - Net Return Index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund Trends Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund Trends Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

**What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

**Negative screening**

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

**The positive selection methodology**

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

**What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund Trends Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Trends Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information

can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund Trends Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The sub-fund invests primarily in shares of companies operating in areas which, according to the manager, fit with the theme 'challenges and opportunities that will apply during this and subsequent decades'. The manager focuses mainly on shares of companies whose activities focus on long-term trends of transformative technologies, climate change, scarcity of natural resources, mismatch of skills, urbanization and changing lifestyles.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

sustainable investments are with

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

#### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund Trends Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

#### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

#### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI North America-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI North America-Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund USA & Canada Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO2 equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI North America-Net Return index as described in the prospectus under the title 'Information regarding the sub-fund USA & Canada Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI North America-Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund USA & Canada Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund USA & Canada Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

**What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

**Negative screening**

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

**The positive selection methodology**

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

**What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund USA & Canada Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund USA & Canada Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion

during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund USA & Canada Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The assets are mainly invested in shares of companies from North America.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

☐

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

sustainable investments are with

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

#### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund USA & Canada Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

#### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI North America-Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

#### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund We Care Responsible Investing

**Legal entity identifier (LEI):**  
549300C60FZDN3VNUF17

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ Yes ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective: %**

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective: %**

☐ It promotes E/S characteristics, but **will not make any sustainable investments.**

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 50.00% of its assets in economic activities that contribute to the achievement of social objectives (i.e. 'sustainable investments'). The minimum proportion assets promoting

environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Instruments issued by companies                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| ESG risk score                                                      | Better than the following benchmark: MSCI All Countries World - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Greenhouse gas Intensity                                            | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the MSCI All Countries World – Net Return Index as described in the prospectus under the title 'information concerning the sub-fund We Care Responsible Investing' and a 50% reduction by 2030, versus 75% of the benchmark value of MSCI All Countries World – Net Return Index at the end of 2019, with an immediate reduction of 30% taken into account in 2019, followed by a 3% reduction per year. In order to reflect the specific thematic characteristics of this sub-fund, a unique starting point will apply to the calculation of the greenhouse gas intensity trajectory, which may be higher or lower than the benchmark (MSCI All Countries World - Net Return Index).<br><br>The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of 2019.<br><br>The weighted average of the portfolio will be compared to this pathway. |
| <b>Minimum % Sustainable Investments</b>                            | A minimum of 50.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Minimum % of sustainable investments with a social objective</b> | 50.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Minimum % of assets promoting E/S characteristics</b>            | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Other specific objectives</b>                                    | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

#### **(1) Indicators related to the ESG-risk score**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund We Care Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

## **(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund We Care Responsible Investing' and a reduction of 50% of 75% of the benchmark value by 2030 compared to the benchmark MSCI All Countries World - Net Return Index in 2019 as described in the prospectus under the title 'Information regarding the sub-fund We Care Responsible Investing'. In order to reflect the specific thematic characteristics of this sub-fund, a unique starting point will apply to the calculation of the greenhouse gas intensity trajectory, which may be higher or lower than the benchmark (MSCI All Countries World - Net Return Index).

The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of

2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be compared to this pathway.

Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded

outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----How have the indicators for adverse impacts on sustainability factors been taken into account?

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the

sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### **Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund We Care Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of social objectives (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund We Care Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund We Care Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Care Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 50.00% of the assets in 'sustainable investments with an social objective' as defined by art. 2(17) SFDR.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More

information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund We Care Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The subfund invests primarily in shares of companies that are contributing to the medical well-being of society through their products and services, such as:

- Production and development of medicine
- Biotech
- Medical technology
- Diagnostics, symptom recognition and tests

- Digital health care
- Care for elderly and sick people
- Outsourcing of medical activities
- Distribution of medical supplies
- Health and life insurance
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

☒ Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 50.00% in sustainable investments as defined by art. 2(17) SFDR.

The sub-fund does not commit to invest a minimum share thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy. Therefore, the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is thus 0%.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 50.00%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Care Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund We Care Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund We Digitize Responsible Investing

**Legal entity identifier (LEI):**  
549300VXRJ6XIL0EY196

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 25.00% of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the

sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund We Digitize Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI

All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund We Digitize Responsible Investing' and a reduction of 50% of 75% of the benchmark value by 2030 compared to the benchmark MSCI All Countries World - Net Return Index in 2019 as described in the prospectus under the title 'Information regarding the sub-fund We Digitize Responsible Investing'. In order to reflect the specific thematic characteristics of this sub-fund, a unique starting point will apply to the calculation of the greenhouse gas intensity trajectory, which may be higher or lower than the benchmark (MSCI All Countries World - Net Return Index).

The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be compared to this pathway.

Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

### **● What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

### **● How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.
- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----How have the indicators for adverse impacts on sustainability factors been taken into account?

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

● ----- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund We Digitize Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund We Digitize Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?.'

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

### **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?.'

### **What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund We Digitize Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title

'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Digitize Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 25.00% of the assets in 'sustainable investments with an environmental objective that are not aligned with the EU Taxonomy' as defined by art. 2(17) SFDR.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund We Digitize Responsible Investing".

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The sub-fund aims to generate a return by investing primarily in shares of companies whose products and services support the digital evolution, such as:

- Electronics
- Big data and artificial intelligence
- Quantum computing
- Cloud services and cloud computing
- Cybersecurity
- Semiconductors
- Data services to companies
- Software for professional purposes
- IT consultancy
- Network infrastructure
- Digital marketplaces
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?**

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The sub-fund commits to invest at least 25.00% in sustainable investments as defined by art. 2(17) SFDR.

The sub-fund commits to invest a minimum of 25.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 0%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Digitize Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

**How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

**How does the designated index differ from a relevant broad market index?**

Not applicable.

**Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund We Digitize Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund We Like Responsible Investing

**Legal entity identifier (LEI):**  
549300G0BNG5C3LT5979

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: %

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5.00% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective**: %.

It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 5.00% of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the

sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund We Like Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI

All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund We Like Responsible Investing' and a reduction of 50% of 75% of the benchmark value by 2030 compared to the benchmark MSCI All Countries World - Net Return Index in 2019 as described in the prospectus under the title 'Information regarding the sub-fund We Like Responsible Investing'. In order to reflect the specific thematic characteristics of this sub-fund, a unique starting point will apply to the calculation of the greenhouse gas intensity trajectory, which may be higher or lower than the benchmark (MSCI All Countries World - Net Return Index).

The unique starting point of the sub-fund is 75% of the value of this benchmark at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be compared to this pathway.

Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.
- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

● ----- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund We Like Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund We Like Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

## What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?.'

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

### **What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?.'

### **What is the asset allocation planned for this financial product?**

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund We Like Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment

information of title "Information concerning the sub-fund We Like Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment

information under the heading "Information concerning the sub-fund We Like Responsible Investing".

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The subfund invests primarily in shares of companies that cater for products and services that consumers perceive as adding value beyond their basic needs, such as:

- Sport
- Travel and culture
- Restaurants, takeaway meals and fast food
- Cosmetics and beauty products
- Media and gaming
- Luxury goods
- Pets and care
- Personal mobility
- E-commerce
- Wealth management
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?**

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The sub-fund commits to invest at least 5.00% in sustainable investments as defined by art. 2(17) SFDR.

The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 0%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Like Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

**How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

**How does the designated index differ from a relevant broad market index?**

Not applicable.

**Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund We Like Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund We Live Responsible Investing

**Legal entity identifier (LEI):**  
549300PFJ5BX0HHHJF43

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: %

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10.00% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective**: %.

It promotes E/S characteristics, but **will not make any sustainable investments**.

**What environmental and/or social characteristics are promoted by this financial product?**

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 10.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI All Countries World - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund We Live Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI All Countries World - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 10.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                 |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 2.50%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 2.50%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund We Live Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund We Live Responsible Investing' and a reduction of 50% by 2030 compared

to the benchmark MSCI All Countries World - Net Return Index at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be compared to this pathway.

Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded

outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----How have the indicators for adverse impacts on sustainability factors been taken into account?

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the

sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### **Does this financial product consider principal adverse impacts on sustainability factors?**

Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund We Live Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund We Live Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund We Live Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Live Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 10.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 2.50% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 2.50% in sustainable investments with a social objective.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on

the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund We Live Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The subfund invests primarily in shares of companies that cater for products and services that consumers need in everyday life, such as:

- Utilities for water, Internet and electricity, for example

- Computer equipment, software and communication devices for everyday use
- Food and beverages
- Household goods
- Products for hygiene and daily care
- Household appliances
- DIY items
- Textiles and clothing
- E-commerce
- Everyday banking
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

☐ **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?**

☐

Yes

☐

in fossil gas

☐

in nuclear energy

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

**1. Taxonomy-alignment of investments including sovereign bonds\***

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

**2. Taxonomy-alignment of investments excluding sovereign bonds\***

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 10.00% in sustainable investments as defined by art. 2(17) SFDR.

The sub-fund commits to invest a minimum of 2.50% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 2.50%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Live Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund We Live Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund We Shape Responsible Investing

**Legal entity identifier (LEI):**

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ Yes ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 15.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 15.00% of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ESG risk score                                                                                                                                                    | Better than the following benchmark: 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Greenhouse gas Intensity                                                                                                                                          | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund We Shape Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| Minimum % Sustainable Investments                                                                                                                                 | A minimum of 15.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | 15.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Minimum % of assets promoting E/S characteristics                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Other specific objectives                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund We Shape Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World

Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund We Shape Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index at the end of 2019.

An immediate 30% reduction will be introduced for 2019, followed by a 3% reduction on an annual basis. The weighted average of the portfolio will be compared to this pathway.

Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives.

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.
- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----How have the indicators for adverse impacts on sustainability factors been taken into account?

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

----- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies' involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund We Shape Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of environmental objectives (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund We Shape Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

### **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

#### Negative screening

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

#### The positive selection methodology

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

### **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

## What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account. Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund We Shape Responsible Investing".

Within these categories of eligible assets, the sub-fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Shape Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 15.00% of the assets in 'sustainable investments with an environmental objective that are not aligned with the EU Taxonomy' as defined by art. 2(17) SFDR.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on

the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.'

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund We Shape Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The subfund invests primarily in shares of companies that are shaping the society of the future through their products and services, such as:

- Automation and robotisation

- Solutions for energy transition and storage
- Infrastructure and installations for transport and freight vehicles
- Facilities needed in a circular economy
- Water purification, soil decontamination and air quality improvement
- Machines and installations for more efficient agriculture and forestry
- Industrial plants and machines
- Building materials and construction activities
- Materials
- Logistical solutions
- Credit facilities and financial services to companies and governments
- Etc.

A current overview can be found at [www.kbc.be/thematic-funds](http://www.kbc.be/thematic-funds).

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

☐ Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**What is the minimum share of investments in transitional and enabling activities?**

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

The sub-fund commits to invest at least 15.00% in sustainable investments as defined by art. 2(17) SFDR.

The sub-fund commits to invest a minimum of 15.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

**What is the minimum share of socially sustainable investments?**

The minimum share of sustainable investments with a social objective is 0%.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund We Shape Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark 20% MSCI All Countries World Materials - Net Return Index and 55% MSCI All Countries World Industrials - Net Return Index and 25% MSCI All Countries World Financials - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

Not applicable.

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

Not applicable.

● **How does the designated index differ from a relevant broad market index?**

Not applicable.

● **Where can the methodology used for the calculation of the designated index be found?**

Not applicable.

**Where can I find more product specific information online?**

**More product-specific information can be found on the website:** [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund We Shape Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund World DBI-RDT Responsible Investing

**Legal entity identifier (LEI):**  
875500EU7S8IEP3KKL21

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: %

**It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20.00% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective**: %.

It promotes E/S characteristics, but **will not make any sustainable investments**.

**What environmental and/or social characteristics are promoted by this financial product?**

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 20.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI World - Net Return index.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI World - Net Return index as described in the prospectus under the title 'information concerning the sub-fund World DBI-RDT Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI World - Net Return index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 20.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                            |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Minimum % of sustainable investments with a social objective</b>                                                                                                      | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Minimum % of assets promoting E/S characteristics</b>                                                                                                                 | 95.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Other specific objectives</b>                                                                                                                                         | Not applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI World - Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI World - Net Return index as described in the prospectus under the heading 'Information regarding the sub-fund World DBI-RDT Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO<sub>2</sub> equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI World - Net Return index as described in the prospectus under the title 'Information regarding the sub-fund World DBI-RDT Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI World - Net Return index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

## **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

## **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund World DBI-RDT Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund World DBI-RDT Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

**What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

**Negative screening**

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

**The positive selection methodology**

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

**What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, deposits, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund World DBI-RDT Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

In addition, the sub-fund commits to invest at least 20.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 20.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?'.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**  
The sub-fund will not invest in derivatives.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

At least 95% of the assets are invested in a worldwide selection of shares.

The fund invests a minimum of 50% in shares whose dividends and capital gains are eligible for the system of 'dividend received deduction' (DRD).

Under normal circumstances, however, the sub-fund will aim to invest between 70% and 100% in shares whose dividends and capital gains qualify for the DRD regime.

This means that it is possible that the equity portfolio will not be fully invested in equities whose capital gains and dividends qualify for the DRD regime.

As a result, income distributed by the sub-fund may not be 100% eligible for the dividend received deducted.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

sustainable investments are with

The sub-fund commits to invest at least 20.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

#### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

#### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

For the investments under “#2 Other” there are no environmental or social minimum safeguards.

#### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI World - Net Return index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

#### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC Equity Fund World DBI-RDT Responsible Investing

**Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and article 6, first paragraph of Regulation (EU) 2020/852**

**Product Name:**  
KBC Equity Fund World Responsible Investing

**Legal entity identifier (LEI):**  
87550036PRT3IRM8GY67

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU-Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Does this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes** ☒ ☐ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective**: %

☒ **It promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25.00% of sustainable investments

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective**: %.

☐ It promotes E/S characteristics, but **will not make any sustainable investments**.

### What environmental and/or social characteristics are promoted by this financial product?

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of 25.00% of its assets in economic activities that contribute to the achievement of environmental or social objectives (i.e. 'sustainable investments'). The minimum proportion assets

promoting environmental and social characteristics of this sub-fund is 95.00%.

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities which contribute to any of the environmental objectives set out in Article 9 of the Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment ('EU Taxonomy'). The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

This sub-fund:

- promotes the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG riskscore;
- promotes climate change mitigation by preferring companies with lower greenhouse gas intensity, with the objective of meeting a predetermined greenhouse gas intensity target;
- supports sustainable development through 'sustainable investments' in accordance with art. 2(17) SFDR.

Sustainable investments will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

The concrete objectives of the sub-fund are:

| Objective                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Instruments issued by companies                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ESG risk score                                                                                                                                                           | Better than the following benchmark: MSCI All Countries World - Net Return Index.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Greenhouse gas Intensity                                                                                                                                                 | Companies are assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark: MSCI All Countries World - Net Return Index as described in the prospectus under the title 'information concerning the sub-fund World Responsible Investing' and a reduction of 50% by 2030 based on the following benchmark: MSCI All Countries World - Net Return Index at end of 2019. An immediate reduction of 30% is envisaged for 2019, followed by an annual reduction of 3%. |
| <b>Minimum % Sustainable Investments</b>                                                                                                                                 | A minimum of 25.00% of sustainable investments. The sustainable investments for this sub-fund will consist of investments in companies contributing to the achievement of the UN Sustainable Development Goals plus instruments awarded the 'sustainable development' label by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.                                                                                                                                                                |
| <b>Minimum % sustainable investments with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</b> | 5.00%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

**What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**(1) Indicators related to the ESG-risk score**

The contribution to the integration of sustainability into policy decisions of the companies is measured based on an ESG risk score. This score represents the aggregated performance assessment of a given company with respect to general environmental, social and governance themes. The main factors underpinning the ESG criteria are:

- respect for the environment (e.g. reduction in greenhouse gas emissions);
- attention to society (e.g. employee working conditions); and
- corporate governance (e.g. independence and diversity of the board of directors).

At least 90% of the corporate investments in the portfolio, as measured by assets under management, must have an ESG risk score.

The ESG risk score is a measure of a company's environmental, social and governance (ESG) risks. To determine this score, relevant key ESG issues for the sub-sector in question are considered, along with the quality of the company's management team and any possible ESG controversies involving the company in the recent past. The ESG risk score for companies measures the difference between a company's exposure to ESG risks relevant to its sector and the extent to which a company hedges those risks. The lower a company's ESG risk score on a scale of 0 to 100, the less its sustainability risk. The ESG risk scores for companies are based on data supplied by data provider Sustainalytics, as well as internal research.

In addition to excluding companies with a severe ESG risk (i.e. an ESG risk rating > 40), the sub-fund will promote best practices by using an overall ESG risk score that is better than the ESG risk score of the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the heading 'Information regarding the sub-fund World Responsible Investing'.

This list of factors underpinning the ESG criteria is not exhaustive and may be changed under the supervision of the Responsible Investing Advisory Board.

To calculate the ESG-risk score at portfolio level, the weighted average of the ESG-risk scores of the positions in the sub-fund are taken into account. Technical items such as cash and derivatives are not taken into account and also companies for which no data is available are left out. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for these items.

The ESG objectives will be evaluated annually and may be adjusted. External circumstances such as market movements and updates of data regarding the ESG-risk score can lead to investment solutions failing to achieve this objective. In that case the investment solution will be adapted to meet the objective again within a time frame that takes into account the client's best interest.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

**(2) Indicators related to the greenhouse gas intensity**

The objective to promote climate change mitigation by preferring companies with lower greenhouse gas intensity in order to reach a predetermined greenhouse gas intensity objective, applies to at least 90% of the portfolio. The objective does not apply to companies for which data is not available.

More information on the sub-fund's concrete objectives can be found in the summary table in the section 'What environmental and/or social characteristics are promoted by this financial product?'.

The contribution of companies to climate change mitigation is measured based on their greenhouse gas intensity. Greenhouse gas intensity is defined as absolute greenhouse gas emissions (in tonnes CO2 equivalent) divided by revenues (in million USD).

The number of tonnes of greenhouse gas emitted by a company is the sum of:

- the direct greenhouse gas emissions resulting from the company's own activities (scope 1); and
- the indirect greenhouse gas emissions resulting from the generation of purchased electricity (scope 2).

The indirect greenhouse gas emissions resulting from the activities of suppliers and customers, for example (scope 3), are not included in the sum as this scope 3 data largely depends on assumptions and is not disclosed by companies. Greenhouse gas intensity calculations are based on data sourced from Trucost, as well as internal research. Within the sub-fund, the greenhouse gas intensity score based on scope 1 and scope 2 emissions is assigned to at least 90% of the companies in the sub-fund.

The sub-fund's target in terms of greenhouse gas intensity is assessed on two targets whereby the most strict of the two will determine the target applied: 15% better than the benchmark MSCI All Countries World - Net Return Index as described in the prospectus under the title 'Information regarding the sub-fund World Responsible Investing' and a reduction of 50% by 2030 compared to the benchmark MSCI All Countries World - Net Return Index at the end of 2019.

An immediate reduction of 30% is implemented for 2019, followed by a 3% reduction on an annual basis. The portfolio's weighted average will be assessed against that trajectory. Greenhouse gas intensity at the portfolio level is calculated based on the weighted average of the greenhouse gas intensity of the positions in the sub-fund. This calculation does not take technical items such as cash and derivatives into account, and companies without data are also excluded. The weights used in the calculation depend on the size of the positions in the sub-fund, rescaled for the items without data. The companies for which no data is available are included in the negative screening and could be given an overall ESG risk rating. External circumstances such as market movements and updates of data regarding the greenhouse gas intensity can lead to investment solutions not meeting this target trajectory. In that case the investment solution will be adapted to meet the trajectory again within a time frame that takes into account the client's best interest.

Greenhouse gas intensity targets are monitored and evaluated annually. The targets can be revised upwards or downwards. For example, if companies do not show sufficient progress in reducing their greenhouse gas intensity and if this cannot be compensated for through portfolio optimisation, KBC Asset Management NV may be forced to adjust the target upwards. It is also possible that at some point the greenhouse gas intensity will reach a lower level much faster than expected. When companies make very good progress in terms of greenhouse gas intensity, KBC Asset Management NV wants to be able to follow that acceleration in the portfolio. In that case the target can be adjusted downwards.

### **(3) Indicators related to the UN Sustainable Development Goals**

To support sustainable development, the sub-fund commits to invest a minimum proportion of the portfolio in companies that contribute to the achievement of the UN Sustainable Development Goals. The UN Sustainable Development Goals include both social and environmental objectives. Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can also award the "sustainable development" label to instruments, on the advice of the Responsible Investing Advisory Board.

**What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

#### **(1) UN Sustainable Development Goals**

Companies are considered to contribute to sustainable development when at least 20% of the revenues are linked to the UN Sustainable Development Goals. Instruments of these companies are designated as "sustainable investments". The activities of the companies are assessed on multiple sustainable themes that can be linked to the UN Sustainable Development Goals.

In addition, KBC Asset Management NV can award the 'sustainable development' label to instruments, on the advice of the Responsible Investing Advisory Board. In that case, these investments shall also qualify as "sustainable investments" as defined by article 2(17) SFDR.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti corruption and antibribery matters.

The sustainable investments that the sub-fund partially intends to make do not cause significant harm to the sustainable investment objective due to negative screening.

The sub-fund takes into account all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation (EU) 2022/1288 and the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288 through the negative screening.

The negative screening entails the advance exclusion from the responsible investment universe by the sub-fund of companies that do not align with the exclusion policies.

The application of these policies means that:

- companies involved in certain activities are excluded from the sub-fund's investment universe. A distinction can be made between companies that are excluded if they exceed a certain turnover threshold in relation to specific activities, such as conventional weapons, fur and special leather, tobacco, gambling or adult entertainment, and those that are excluded outright because they are involved in specific activities, such as controversial weapons, nuclear weapons, agricultural commodities, or the mining of thermal coal, among others.

- the sub-fund may nevertheless invest in companies involved in conventional weapons and/or nuclear weapons that exceed certain turnover thresholds, provided they are included on the whitelist as stated in the policy. The whitelist is a list drawn up by KBC Group and includes companies involved in conventional weapons and/or nuclear weapons but which are nevertheless deemed acceptable as investments within funds that invest responsibly, taking into account factors such as the proportion of arms sales to non-NATO countries and a possible involvement in human rights controversies related to armed conflict.

The negative screening also ensures that companies based in countries that encourage unfair tax practices, that seriously violate fundamental principles of environmental protection, social responsibility and good governance (through the normative screening, through a poor ESG risk rating, due to involvement in unsustainable countries by not meeting the sustainability criteria and controversial regimes, due to severe controversies related to water emissions, pollution or waste and gender diversity and due to high or severe controversies in the context of activities that have a negative impact on biodiversity and for which insufficient measures are taken to reduce their impact) are excluded from the sub-fund's investment universe.

More information regarding the different exclusions and the applicable turnover thresholds can be found at [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Exclusion policy for Responsible Investing funds.

These negative screening principles are not exhaustive and may be modified on the advice of the Responsible Investing Advisory Board.

-----*How have the indicators for adverse impacts on sustainability factors been taken into account?*

Through the exclusion policy for responsible investment funds, and in particular through the normative screening and ESG risk assessment, all indicators for the principal adverse impacts of the investment decisions on sustainability factors as listed in Table 1 of Annex 1 of the Delegated Regulation 2022/1288 as well as the relevant indicators for the principal adverse impacts of the investment decisions on sustainability factors in Tables 2 and 3 of Annex 1 of the Delegated Regulation 2022/1288, are taken into account for instruments issued by companies. The sub-fund does not invest in companies that seriously violate the Principles of the United Nations Global Compact and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises. All companies involved in serious controversies related to environmental, social or good governance issues are excluded as well. Also excluded are companies with an ESG risk rating of more than 40 according to data provider Sustainalytics or internal research.

On top of the normative screening and the ESG risk assessment, using the positive selection methodology regarding greenhouse gas intensity and the exclusions in the exclusion policy for responsible investment funds, the following indicators for adverse impacts on sustainability factors are also taken into account as follows for all investments of this sub-fund:

- **Indicator 3:** greenhouse gas ('GHG') intensity of investee companies is taken into account through the greenhouse gas intensity reduction target for companies.
- **Indicator 4:** exposure to companies active in the fossil fuel sector is taken into account as the sub-fund does not invest in companies that are active in the fossil fuel sector.
- **Indicator 7:** Activities negatively affecting biodiversity-sensitive areas are taken into account as the sub-fund does not invest in companies that have high or severe controversies related to Land Use and Biodiversity as well as companies with activities that have a negative impact on biodiversity and that don't take sufficient measures to reduce their impact.
- **Indicator 10:** Violations of the United Nations Global Compact (UNGC) Principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises is taken into account as the sub-fund does not invest in companies that seriously violate UNGC principles or OECD guidelines.
- **Indicator 14:** exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) is taken into account as the sub-fund does not invest in companies that are active in controversial weapons.

In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through the Proxy Voting and Engagement Policy of KBC Asset Management NV.

A complete overview of the indicators for adverse impacts on sustainability factors that the sub-fund can take into account is included in Annex 1 of Delegated Regulation (EU) 2022/1288.

-----*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details*

Companies seriously violating the basic good practices in terms of environmental, social and governance issues, as assessed by the UN Global Compact Principles, are excluded from the sub-fund. The United Nations Global Compact has formulated ten guiding sustainability principles regarding human rights, labour, environment and anti-corruption which are part of the internal screening. In addition, KBC Asset Management NV assesses the companies'

involvement in violations of the International Labour Organization's (ILO) Conventions, the OECD Guidelines for multinational enterprises and the UN Guiding Principles on Business and Human Rights.

The sub-fund commits to respect the letter and the spirit of the United Nations Universal Declaration of Human Rights; the principles concerning fundamental rights in the eight International Labour Organisation core conventions as set out in the Declaration on Fundamental Principles and Rights at Work; the UN Declaration on the Rights of Indigenous Peoples; the UK Modern Slavery Act and other international and regional human rights treaties containing internationally recognised standards by which the business sector must abide.

KBC Asset Management NV assesses all companies on the 'Human Rights List' of KBC Group as well as all companies meeting the criteria below:

- a high or severe controversy score related to Human Rights, for subindustries for which Human Rights are considered a high or severe risk.
- a severe controversy score related to Human Rights, for all other subindustries.

Based on this assessment, appropriate measures are taken, ranging from engagement with the companies concerned to selling positions. More information on the Policy on Human Rights can be found at [www.kbc.com/en/corporate-sustainability/setting-rules-and-policies](http://www.kbc.com/en/corporate-sustainability/setting-rules-and-policies) > KBC Group's rules and policies > Our sustainability policies > Human rights commitment > Human Rights Policy.

More information on negative screening can be found in the section on "How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective" of this annex.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

#### Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes

The principal adverse impacts on sustainability factors are explicitly taken into account for all investments of the sub-fund through the exclusion policies applied. In addition, the principal adverse impacts on sustainability factors are implicitly taken into account through KBC Asset Management NV's proxy voting and engagement policies.

More information on the principal adverse impacts on sustainability factors can be found under the section "How have the indicators for adverse impacts on sustainability factors been taken into account?" of this annex.

The information on principal adverse impacts on sustainability factors can also be found in the annual report for this sub-fund.

☐ No

#### What investment strategy does this financial product follow?

The **investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The general investment strategy of the sub-fund is described in section 2. 'Investment information' under title "Information concerning the sub-fund World Responsible Investing" of the prospectus.

Within the constraints described in the general investment strategy, the sub-fund pursues responsible investment objectives based on a dualistic approach: a negative screening and a positive selection methodology.

More information regarding the negative screening and positive selection methodology can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?' and the section 'What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?' of this annex.

The sub-fund promotes a combination of environmental and/or social characteristics and, even though it does not have sustainable investments as an objective, it shall invest a minimum proportion of its assets in economic activities that contribute to the achievement of (i.e. 'sustainable investments').

The companies in which it invests must follow good governance practices.

It cannot be ruled out that very limited investments may be made temporarily in assets that no longer contribute to achieving environmental or social objectives promoted by the sub-fund.

Among other things, this can be due to external circumstances, erroneous data, corporate events, and updates to the screening criteria. In these cases, the assets concerned will be replaced with more appropriate assets as quickly as possible, always taking into account the sole interest of the investor. More information can be found in the prospectus under possible exceptions as described in section 2. Investment information of title 'Information concerning the sub-fund World Responsible Investing'.

Moreover, automatic checks happen in the system that manages investments, constantly ensuring that investments are made only in issuers complying with eligible responsible investment universes.

**What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The negative screening and positive selection methodology are the binding elements in the selection of investments to achieve each of the environmental or social characteristics promoted by the sub-fund.

**Negative screening**

The end result of this negative screening procedure is that the sub-fund excludes companies in advance from the Responsible Investment universe which fall foul of the exclusion policies that apply to this sub-fund.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

**The positive selection methodology**

The sub-fund will promote the integration of sustainability into the policy decisions of companies by preferring companies with a better ESG risk score and promote climate change mitigation, by preferring companies with lower greenhouse gas intensity, with the goal of meeting a predetermined greenhouse gas intensity target. The sub-fund will also support sustainable development, by including companies that contribute to the UN Sustainable Development Goals.

More information on the concrete objectives applicable to this sub-fund regarding ESG-risk score, greenhouse gas intensity and the sustainable investments can be found in the overview table under section 'What environmental and/or social characteristics are promoted by this financial product?'.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

There is no committed minimum rate to reduce the scope of the investments considered prior to the application of the abovementioned investment strategy.

**What is the policy to assess good governance practices of the investee companies?**

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The four principles regarding good governance practices, i.e. i) sound management structures, ii) employee relations, iii) remuneration of staff and iv) tax compliance, are taken into account in the negative screening, whereby the sub-fund excludes companies that violate the exclusion policies. In addition to excluding companies involved in certain activities, this screening also ensures that companies who seriously violate fundamental principles of environmental protection, social responsibility and good governance are excluded through the assessment of controversies and by evaluating companies based in countries that encourage unfair tax practices.

Private issuers are assigned an ESG risk score. The indicators used in this assessment vary depending on the company's subsector, but good governance is always taken into account.

Companies with an ESG risk score higher than 40, based on data from the data provider Sustainalytics or internal research, are excluded. Ad-hoc exclusions or deviations can be applied to certain companies on the advice of the Responsible Investing Advisory Board.

More information on the negative screening can be found in the section 'How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?'.

## What is the asset allocation planned for this financial product?

**Asset allocation**  
describes the  
share of  
investments  
in  
specific assets.

The sub-fund may invest in securities, money market instruments, units in undertakings for collective investment, deposits, financial derivatives, liquid assets and all other instruments insofar as permitted by the applicable laws and regulations and consistent with the object as described in the prospectus under title "Information concerning the sub-fund World Responsible Investing".

Within these categories of eligible assets, the sub-fund fund aims to invest at least 95.00% of the assets in assets that promote environmental or social characteristics.

Corporate investments in issuers passing the negative screening and contributing to at least one specific positive selection Responsible Investing methodology are considered as 'assets promoting environmental and social characteristics'.

(Term) deposits are classified as 'promoting environmental and social characteristics' if the counterparties pass the exclusion policy for conventional and Responsible Investing funds and the exclusion policy for Responsible Investing funds, and are net aligned with at least one of the first fifteen UN Sustainable Development Goals. These counterparties are net aligned with the first 15 UN Sustainable Development Goals if they have at least one +2 Net Alignment Score on any of the first 15 SDGs at MSCI.

More information on the MSCI Net Alignment Score can be found in the investment policy for Responsible Investing funds which is available on [www.kbc.be/investment-legal-documents](http://www.kbc.be/investment-legal-documents) > Investment policy for Responsible Investing funds.

Consequently, the sub-fund will invest a maximum of 5.00% of its assets in technical investments, such as liquidities and derivatives, and assets in which the sub-fund temporarily invests following a scheduled update of the eligible universe that determines which assets promote environmental and/or social characteristics, for which there are no environmental or social safeguards.

The sub-fund may hold or invest in these types of assets to achieve its investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks.

Derivatives are used to achieve investment objectives and to hedge risks as specified in title 'Permitted derivative transactions' as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund World Responsible Investing".

Investments in derivatives are not used to promote environmental or social characteristics and also will not affect them.

In addition, the sub-fund commits to invest at least 25.00% of the assets in 'sustainable investments' as defined by art. 2(17) SFDR. The sub-fund shall invest a minimum of 5.00% in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy and a minimum of 5.00% in sustainable investments with a social objective. The sum of investments with an ecological objective that do not qualify as ecologically sustainable within the meaning of the EU Taxonomy and investments in socially sustainable investments do not necessarily need to be equal to the overall sustainable investment objective in accordance with Article 2(17) SFDR. In the management of the sub-fund, no specific focus is placed on environmentally sustainable investments that do not qualify as environmentally sustainable within the meaning of the EU Taxonomy or socially sustainable investments. The percentages are set so that investments can be made freely within both categories, provided that the overall percentage of sustainable investments in accordance with Article 2(17) SFDR of 25.00% is always respected.

The objective with respect to sustainable investments for this sub-fund is equal to the sum of investments that are considered "sustainable" based on the published methodology on contributing to the achievement of the UN Sustainable Development Goals, plus instruments that are classified as "sustainable" by KBC Asset Management NV on the advice of the Responsible Investing Advisory Board.

In addition, non-financial companies that have at least 20% of their revenues aligned with the EU Taxonomy Framework according to data from Trucost, are considered to contribute to sustainable development. For companies in the financial sector, a different methodology applies. For credit institutions, the alignment with the EU Taxonomy Framework is based on the Green Asset Ratio, while for other financial companies the alignment with the EU Taxonomy Framework is based on the alignment of their investment portfolios. Instruments of companies that meet these requirements are referred to as "sustainable investments," according to art. 2(17) SFDR. More information on the percentage in the portfolio that was considered "sustainable investments with an environmental objective aligned with the EU Taxonomy Framework" based on this criterion during the reporting period, can be found in the annual reports for this sub-fund. More information

can also be found in the section 'What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?.

Taxonomy-aligned activities are expressed as a share of:

**-turnover**  
reflecting the share of revenue from green activities of investee companies.

**-capital expenditure**  
(CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

**-operational expenditure**  
(OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product;

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S-characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Investments in derivatives are not used to attain the environmental or social characteristics promoted by the sub-fund and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the permitted derivatives transactions as described in the prospectus in section 2. Investment information under the heading "Information concerning the sub-fund World Responsible Investing".

#### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sub-fund shall not invest a minimum proportion of its assets in environmentally sustainable economic activities within the meaning of the EU Taxonomy Framework. The minimum proportion of investments in environmentally sustainable economic activities within the meaning of the EU Taxonomy is 0.00%.

The sub-fund invests primarily in a worldwide selection of shares from any region, sector or theme.

Consequently, the visual representation of the portfolio composition in '1. Taxonomy-alignment of investments including sovereign bonds' does not differ from the visual representation of portfolio composition in '2. Taxonomy-alignment of investments excluding sovereign bonds'.

● Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>(1)</sup>?

☐

Yes

☐

in fossil gas

☐

in nuclear energy

☒

No

(1) Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

**\*\*The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

1. Taxonomy-alignment of investments including sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

2. Taxonomy-alignment of investments excluding sovereign bonds\*

■ Taxonomy-aligned (no fossil gas & nuclear)  
■ Non Taxonomy-aligned

This graph represents 100.00% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consists of all sovereign exposures.

\*\* The proportion of total investments excluding government bonds refers to expected exposure and is for illustrative purposes only. This proportion may vary over time.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

☐

What is the minimum share of investments in transitional and enabling activities?

Not applicable.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

are sustainable investments with

The sub-fund commits to invest at least 25.00% in sustainable investments as defined by art. 2(17) SFDR. The sub-fund commits to invest a minimum of 5.00% thereof in instruments with an environmental objective that are not aligned with the EU Taxonomy.

an environmental objective that **do not take into account** the criteria for environmentally sustainable economic activities under the EU-Taxonomy.

Asset managers depend on available sustainability data relating to their investee companies. There is currently a lack of sustainability data available. This has created the risk that investment funds currently report a very low percentage of investments that comply with the EU Taxonomy.

### What is the minimum share of socially sustainable investments?

The minimum share of sustainable investments with a social objective is 5.00%.

### What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?

There are technical investments such as liquidities and derivatives that are not part of the screening methodology. The sub-fund may hold or invest in these types of assets to achieve investment objectives, to diversify the portfolio, for liquidity management purposes and to hedge risks. Investments in derivatives are not used to promote environmental or social characteristics and will not affect them.

Derivatives are used to achieve investment objectives and to hedge risks as specified in the title "Permitted Derivative Transactions" as described in the prospectus under section 2. Investment information of title "Information concerning the sub-fund World Responsible Investing".

For the investments under "#2 Other" there are no environmental or social minimum safeguards.

### Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental and/or social characteristics promoted by this sub-fund.

For investments issued by companies the benchmark MSCI All Countries World - Net Return Index is used as a basis for comparison, to compare certain ESG characteristics promoted by the sub-fund.

#### How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

Not applicable.

#### How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Not applicable.

#### How does the designated index differ from a relevant broad market index?

Not applicable.

#### Where can the methodology used for the calculation of the designated index be found?

Not applicable.

### Where can I find more product specific information online?

More product-specific information can be found on the website: [www.kbc.be/SRD](http://www.kbc.be/SRD) > KBC
